## Executive Summary

We are honored to be invited to participate in IndiGo's initiative to select an enterprise-grade Marketing Automation and Outbound Communication (OCM & MarTech) platform. Having listened carefully to your team and studied the RFP, we believe the MoEngage platform and our team are best positioned to support IndiGo across passenger engagement, retention, lifecycle marketing, and multi-channel communication, and to displace the incumbent Adobe Campaign V7/V8 environment with a modern, self-serve, AI-first platform. **MoEngage not only demonstrates 100% compliance with IndiGo's requirements but also exceeds standard parameters, positioning the platform effectively to deliver an end-to-end Agentic Marketing Automation solution tailored for IndiGo.**

For many years, marketers have struggled to engage customers at the speed the business demands, held back by fragmented data, engineering dependency, and rule-based legacy tooling. MoEngage was founded in 2014 to solve exactly this: to unify customer data in a single platform, help marketers turn insight into action, and deliver a multi-channel engagement platform built for customer-obsessed marketers and product owners. MoEngage enables hyper-personalisation at scale across outbound channels (mobile push, email, SMS, web push, WhatsApp, RCS, Facebook and Google audiences and other such channels), transactional alerts, and inbound surfaces (in-app, on-site messaging, cards), with connectors to the wider stack. With AI-powered automation and optimisation, brands analyse audience behaviour and engage each passenger with personalised communication at every touchpoint across the lifecycle.

For an airline operating at IndiGo's scale, 142 destinations and India's largest domestic market share, this means the ability to act on booking, behavioural, and loyalty signals in real time: recovering abandoned searches, personalising by route and fare family, driving ancillary revenue, and orchestrating transactional and service communication reliably across the passenger journey.

### Our solution is designed to address five broad themes

- **Single View of the Passenger:** stitch the journey across channels and data sources including web, app, CRM, booking engine, loyalty, CDP, and third-party systems.
- **AI to optimize every part of the journey:** out-of-the-box predictive segments, **Custom Agents, 1:1 Decisioning Agents, Native Agents**, Actionable insights, and Journey optimization via MoEngage's AI (Merlin).
- **A self-serve platform:** fully operable by digital and marketing teams without any engineering dependency.
- **Best-of-breed templating, personalisation, and deliverability** across every channel.
- **Scale with easy versioning, localisation, and execution** across markets and languages.

## Overview of MoEngage

MoEngage is a next-generation, AI-powered marketing automation platform built for the new-age world. Traditional marketing and analytics clouds are expensive to implement, hard to learn, and rule-based. MoEngage offers an enterprise solution that is easier to use, elegantly designed, integrated with the existing tech stack, and learning-based.

MoEngage is trusted by large enterprises worldwide, including Fortune 500 brands, and enables companies to leverage native capabilities across mobile push, email, in-app and on-site personalisation, web push, SMS, WhatsApp, and RCS, with auto-optimisation towards higher conversion powered by machine learning.

## Who are We?

MoEngage is a AI Customer Engagement Platform that helps customer-obsessed brands build stronger customer relationships

★★★★★ 4.5/5

## Regional Presence

MoEngage has deep roots in India, where the company was founded and where it maintains a substantial engineering, product, professional services, and customer success presence. This gives IndiGo a partner with local time-zone coverage, on-the-ground implementation and support capacity, and the ability to conduct face-to-face working sessions as needed through the engagement.

Critically for IndiGo, MoEngage supports data residency within India (AWS Mumbai region), directly aligning with the RFP requirement that IndiGo customer and business data be stored and processed within India, and with DPDP Act 2023 obligations.

## Notable Customers

## Future with MoEngage

MoEngage will work seamlessly with IndiGo's existing technology stack across digital, booking, and offline data. This includes integration with IndiGo's CDP (Firsthive, built on Snowflake), booking and reservation systems, the mobile app and website (via MoEngage SDKs), the loyalty programme (BluChip), CRM, and the enterprise data warehouse, using real-time APIs, streaming, SFTP, and webhooks.

The result is a unified passenger view feeding real-time segmentation, cross-channel journey orchestration, and AI-driven personalisation and decisioning, operated self-serve by IndiGo's marketing team.

| 2 | Customer & Audience Management | The solution shall support real-time and scheduled customer segmentation using rule-based logic, including AND / OR conditions, nested conditions and business rules. | C |  | <ul style="list-style-type: none"> <li>• MoEngage <b>supports both real-time (patented Real-Time Segment Evaluation Capability) and scheduled segmentation</b> using a visual rule builder.</li> <li>• MoEngage supports customer segmentation using rule-based logic with AND/OR conditions and nested conditions. Nested segmentation is easily configurable using the segmentation interface with AND/OR logic.</li> <li>• The platform enables marketers to create segments using operators including AND, OR, IS EQUAL TO, IS NOT EQUAL TO, INCLUDED IN, NOT INCLUDED IN, IN THE FOLLOWING, EXISTS, DOES NOT EXISTS, HAS DONE, HAS NOT DONE, CONTAIN, DOES NOT CONTAIN, STARTS WITH, ENDS WITH, IS EMPTY, IS NOT EMPTY, IS BETWEEN, IS NOT BETWEEN, ON, BEFORE, IS TODAY, IN THE LAST, IN THE NEXT, ATLEAST, MAX, MIN, IS GREATER THAN, IS LESS THAN, FOR THE FIRST TIME, FOR THE LAST TIME, and EXCLUDE.</li> <li>• Filters such as "in the following" or "contains" can be used to include users based on specific criteria. Multiple segments can be combined to create an audience for campaigns.</li> <li>• MoEngage also supports aggregation operations like sum, average, and count segmentation to build deeper queries and target high-value customer groups.</li> <li>• Segments such as 'Delhi-Mumbai frequent flyers who searched but did not book in the last 7 days' can be built without engineering support and refreshed on a schedule or in real time.</li> </ul> <p><b>MoEngage Differentiator</b></p> <ul style="list-style-type: none"> <li>• MoEngage has patented technology for Real-time segmentation which is a step ahead of competition that still refresh segments in 3/6 hrs.</li> </ul> |

| 12 | Campaign Management | The solution shall support drag-and-drop / visual workflow creation for campaign setup and execution. | C |  |  | <ul style="list-style-type: none"> <li>• <b>Email:</b> Yes. MoEngage provides a drag-and-drop WYSIWYG editor for building email content (blocks, images, personalization tokens, buttons) with no code required. A custom HTML editor is also available for teams that want full code-level control.</li> <li>• <b>On-Site Messages and web personalization:</b> Yes. Full drag-and-drop canvas editor with a layout system (rows, columns) and a library of droppable elements: text, image, button, form, gallery, video, countdown, table, and more, with per-element styling controls.</li> <li>• <b>In-Apps:</b> Yes. Drag-and-drop editor supporting layout elements and embedded forms, built for native in-app placements.</li> <li>• <b>Landing Pages:</b> Yes. Dedicated drag-and-drop landing page editor.</li> <li>• <b>Mobile Push / Web Push:</b> No-code template-based. Campaign setup uses a library of pre-built rich push templates (image carousel, image banner, timer, progress bar, etc.) plus support for uploading custom templates.</li> <li>• <b>SMS/MMS/RCS:</b> Template-based, no-code, with personalization tokens. Visual drag-and-drop layout doesn't apply to SMS given the plain-text channel format; MMS supports media attachment within the template.</li> <li>• <a href="https://www.moengage.com/docs/user-guide/campaigns-and-channels/email/create/create-content-with-the-drag-and-drop-editor">https://www.moengage.com/docs/user-guide/campaigns-and-channels/email/create/create-content-with-the-drag-and-drop-editor</a></li> <li>• <a href="https://www.moengage.com/docs/user-guide/campaigns-and-channels/mobile-push/create/push-templates">https://www.moengage.com/docs/user-guide/campaigns-and-channels/mobile-push/create/push-templates</a></li> <li>• <a href="https://www.moengage.com/docs/user-guide/campaigns-and-channels/in-app-message/templates/drag-and-drop-editor/drag-and-drop-editor">https://www.moengage.com/docs/user-guide/campaigns-and-channels/in-app-message/templates/drag-and-drop-editor/drag-and-drop-editor</a></li> </ul> |

| 17 | Campaign Management | The solution shall support campaign scheduling, throttling, batching and send-rate controls. | C |  |  | <ul style="list-style-type: none"> <li>• Yes. MoEngage supports comprehensive campaign scheduling, throttling, batching, and send-rate controls:</li> <li>• <b>Scheduling:</b> Campaigns can be scheduled as one-time, periodic, or event-triggered sends. Best Time to Send (BTS) analyzes historical user interactions to deliver campaigns at optimal engagement times for each individual user.</li> <li>• <b>Throttling:</b> Campaign throttling controls send rates at both global (channel-level) and campaign-specific levels. Minimum and maximum throttle speeds are configurable independently of delivery infrastructure.</li> <li>• <b>Batching &amp; Send-Rate Controls:</b><br/>Wave delivery distributes campaign load across time periods to manage server capacity. Campaigns can be paused mid-delivery, with segmentation available to identify qualified but untargeted users. The platform handles 4 billion messages daily, with clients sending 45 million push messages in under 2 minutes.</li> <li>• <b>Additional Controls:</b> Frequency capping limits messages per user across defined timeframes and channels. These can be at a channel level, based on delivery type as well as tag based (type of message). Do Not Disturb (DND) prevents trigger notifications during idle hours. Minimum delay settings prevent multiple messages in quick succession.</li> <li>• <a href="https://www.moengage.com/docs/user-guide/campaigns-and-channels/getting-started/introduction/delivery-types-moengage-channels">https://www.moengage.com/docs/user-guide/campaigns-and-channels/getting-started/introduction/delivery-types-moengage-channels</a></li> <li>• <a href="https://www.moengage.com/docs/user-guide/settings/channels/delivery-controls/throttling">https://www.moengage.com/docs/user-guide/settings/channels/delivery-controls/throttling</a></li> <li>• <a href="https://www.moengage.com/docs/user-guide/settings/channels/delivery-controls/frequency-capping">https://www.moengage.com/docs/user-guide/settings/channels/delivery-controls/frequency-capping</a></li> </ul> |

| 22 | Journey Orchestration | The solution shall support multi-step and multi-channel journey design with wait, decision, split, goal, exit and suppression logic. | C |  | <ul style="list-style-type: none"> <li>MoEngage Flows supports all the required capabilities and more with:</li> <li><b>Wait logic:</b> Duration-based (e.g., 2 hours, 3 days), time-slot-based (e.g., 7-8pm weekdays), or specific date/time (e.g., next Tuesday 10am)</li> <li><b>Decision/branching:</b> Supports both Binary decisioning as well as multi-logic decisioning using MoEngage's conditional splits. Up to 25 branches per step based on user attributes, events, or campaign interactions (email opened, push delivered, etc.)</li> <li><b>Split:</b> Random splits for A/B testing across up to 5 branches, with Sherpa AI automatically optimizing distribution to best-performing paths based on Engagement, Conversion or both.</li> <li><b>Goal:</b> MoEngage supports up to 5 Conversion goals per journey/campaign. Journey stats are calculated across all conversion goals with the primary conversion goal getting attributed towards Revenue</li> </ul>                                                                                                                                                                                                                                                                                                                                                                               |

|  |  |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--|--|--|--|--|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  |  |  |  |  | <p>and also being used for exiting the journey.</p> <ul style="list-style-type: none"> <li>• <b>Exit:</b> Users automatically exit when conversion goals are met. You can also set custom logic (attributes as well as events) to exit users who fulfil those logics.</li> <li>• <b>Suppression:</b> Delivery controls include: Limiting the number of times a user enters a particular journey, Frequency Capping, DND, Global Control Groups as well as Journey level Control Groups.</li> <li>• Flows orchestrates journeys across 10+ native channels (Push, Email, SMS, WhatsApp, In-App, On-site, Cards, Social) plus any additional channel via connectors/webhooks.</li> <li>• Journeys trigger in real-time based on user actions, attributes, or predictive segments. The drag-and-drop builder enables marketers to create and modify journeys without engineering dependency.</li> <li>• Flows Versioning tracks changes and their impact.</li> </ul> <p><b>MoEngage Differentiator:</b></p> <ul style="list-style-type: none"> <li>• <b>Conditional Split:</b> One "pre-departure readiness" flow can branch a single passenger base into up to 25 parallel paths (BluChip elite with no upgrade yet, Flexi fare with no seat selected, Saver fare international with no bag purchased, group/corporate booking, and so on), each getting a purpose-built message, versus competitor platforms that force IndiGo to build and separately maintain a different flow per segment combination</li> <li>• <b>Linked Conditions</b></li> <li>• Allows you to create dynamic, intelligent checks based on user attributes, actions, and journey progress instead of specifying fixed values.</li> <li>• Example: A passenger searched and selected Flight X, but did not complete the booking for Flight X within 2 hours. The user should then enter the flow. This can be achieved with Linked Conditions, rather than a blanket abandoned-search journey, giving more granular control over journey orchestration, since the check is tied to that specific flight, not just "any search."</li> <li>• <a href="https://www.moengage.com/docs/user-guide/flows-cross-channel-messaging/">https://www.moengage.com/docs/user-guide/flows-cross-channel-messaging/</a></li> </ul> |

| 23 | Journey Orchestration | The solution shall support behaviour-based journey branching using customer actions, engagement signals, booking context and lifecycle stage. | C |  |  | <ul style="list-style-type: none"> <li>• MoEngage Flows supports behavior-based journey branching across all four dimensions specified.</li> <li>• <b>Customer actions:</b> Journeys branch on real-time and historical events, for example, whether a passenger completed a search, selected a flight, abandoned payment, or completed a booking, using event occurrence and event-property conditions to route passengers down different paths.</li> <li>• <b>Engagement signals:</b> Branching on channel engagement, such as email opened/not opened, push delivered/clicked, or message not seen, enabling next-best-channel logic and fallback paths within the same journey.</li> <li>• <b>Booking context:</b> Branching on booking-related attributes and event properties available in MoEngage, such as fare class, route, trip type, or ancillary purchase, allowing journeys to diverge by the nature of the booking. This context is evaluated from passenger attributes and event data synced into MoEngage from IndiGo's booking and CDP systems.</li> <li>• <b>Lifecycle stage:</b> Branching on segment membership and lifecycle attributes, such as new vs returning flyer, loyalty tier, or dormancy status, so a single journey adapts its path to where the passenger is in their lifecycle.</li> </ul>                                                                                                                                                                                                                                                         |

|    |                       |                                                                                                                                                        |   |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 31 | Multi-Channel Communication | The solution shall support delivery tracking, bounce handling, retry logic, failure reporting and communication status tracking. | C |  |  | <ul style="list-style-type: none"> <li>MoEngage supports comprehensive delivery tracking, bounce handling, retry logic, failure reporting, and communication status tracking across all channels.</li> <li><b>Delivery Tracking:</b> The campaign analytics page tracks delivery rates and reasons for failure across all channels including email, SMS, push, and other channels.</li> <li><b>Bounce Handling:</b> The platform categorizes email bounces as hard or soft bounces. Hard bounces (invalid addresses) are not retried, while soft bounces (temporary issues like full mailbox) are automatically retried. Bounced email addresses are automatically removed from subsequent campaigns via the deliverability tool.</li> <li><b>Retry Logic:</b> Email: soft (temporary) bounces are retried through the ESP's deferral window (typically 72h SendGrid / 14h SES) until delivered or marked bounced, while hard bounces are never retried and are auto-suppressed from future sends. For push/SMS/WhatsApp/RCS, retry is governed by the respective gateway or provider (invalid tokens dropped, not retried), with journey-level channel fallback configurable in Flows.</li> <li><b>Failure Reporting:</b> Campaign analytics provides detailed reports on delivery failures, bounce rates and reasons, opt-outs, and channel-specific performance metrics. The platform tracks communication status to prevent continuous triggering to failed addresses/numbers.</li> <li><b>Status Tracking:</b> The platform tracks opens, clicks, reads, delivery rates, bounce rates, conversions, and opt-outs. Suppression management automatically removes users who opt out or have bounced emails from future campaigns.</li> <li><a href="https://www.moengage.com/docs/user-guide/campaigns-and-channels/email-analyze/email-analytics-and-info">https://www.moengage.com/docs/user-guide/campaigns-and-channels/email-analyze/email-analytics-and-info</a></li> <li><a href="https://www.moengage.com/docs/user-guide/campaigns-and-channels/sms-and-rs/sms/analyze-sms-campaigns">https://www.moengage.com/docs/user-guide/campaigns-and-channels/sms-and-rs/sms/analyze-sms-campaigns</a></li> </ul> |

| 32 | Multi-Channel Communication | The solution shall support channel fallback logic based on delivery failure, customer preference, consent status or business rules. | C |  | <ul style="list-style-type: none"> <li>• Yes. MoEngage fully supports intelligent channel fallback driven by delivery failure, customer preference, consent status, and business rules, orchestrated within a single Flow and powered by MoEngage's Next Best Action (NBA) engine.</li> <li>• <b>Delivery failure:</b> If the primary channel fails to deliver, the journey automatically routes the passenger to the next-best channel. Example: a booking confirmation on WhatsApp that fails to deliver falls back to SMS, then email, so the PNR and itinerary always reach the passenger.</li> <li>• <b>Customer preference:</b> MoEngage maintains each passenger's channel preferences and honors them in routing. Example: a passenger who prefers email for fare offers receives them on email, with other channels used only as fallback.</li> <li>• <b>Consent status:</b> Consent and subscription state are maintained per passenger within MoEngage and enforced before every send, so ineligible channels are automatically excluded. Example: a passenger not opted in to promotional SMS is skipped on SMS and routed to an opted-in channel such as app push or email, while transactional alerts follow their own consent basis.</li> <li>• <b>Business rules:</b> Fallback follows defined business logic using passenger attributes and event conditions. Example: a schedule-change alert routes high-tier and international passengers to WhatsApp first with SMS fallback, and escalates to the fastest-delivering channel within two hours of departure.</li> <li>• At the core of this is <b>Next Best Action</b>, which dynamically selects the optimal channel for each passenger based on their engagement behavior, preferences, consent, and channel responsiveness, rather than relying on a static, one-size-fits-all send order. This means IndiGo's communications</li> </ul> |

| 35 | Multi-Channel Communication | The solution shall support customer communication history across channels. | C |  | <ul style="list-style-type: none"> <li>• MoEngage tracks all campaign metadata and communication history across channels (Email, SMS, Push, In-App, On-Site, etc). For each channel, we capture detailed event data:</li> <li>• Email: Sent, Delivered, Failed to Send, Opened (plus Adjusted Opens for bot filtering), Clicked, Bounced (hard + soft), Unsubscribed, Marked as Spam. Rates: Sent, Delivery, Open (unique), Click-to-Open, Click-through. Plus conversion/attribution (below).</li> <li>• Mobile Push (Android/iOS): Sent, Failed to Send, Impressions (Received/Delivered), Clicks, Click-through Rate. iOS impressions tracked via Notification Received event when enabled. Plus conversion/attribution.</li> <li>• Web Push: Sent, Failed to Send, Impressions, Clicks, Click-through Rate. Plus conversion/attribution.</li> <li>• SMS: Sent, Delivered, Failed to Send. Delivery confirmation depends on aggregator DLRs. Click tracking is available only when trackable short-links are used (not a native SMS signal). Unsubscribe via keyword/opt-out where supported. Plus conversion/attribution.</li> <li>• MMS: Sent, Delivered, Failed to Send, Clicked (link-based), Received. Plus conversion/attribution.</li> <li>• RCS: Sent, Delivered, Read, Clicked, Failed to Send. RCS supports richer receipts (read/delivery) than SMS. Plus conversion/attribution.</li> <li>• WhatsApp: Sent, Delivered, Read, Clicked, Received, Failed. (Note: Read receipts, not "Opened.") Plus conversion/attribution.</li> <li>• In-App: Shown/Impressions, Clicked, Dismissed, Closed. Plus conversion/attribution.</li> <li>• On-Site Messaging: Shown/Impressions, Clicked, Dismissed, Closed. Plus conversion/attribution.</li> <li>• Cards: Sent/Delivered, Shown/Viewed, Clicked, Dismissed, Received. Plus conversion/attribution.</li> </ul> |

|    |                               |                                                                                                              |   |  | <ul style="list-style-type: none"> <li>• Connector (custom/webhook channels): Sent, Failed, Converted. Engagement metrics depend on the downstream channel; conversion/attribution is tracked natively.</li> <li>• Conversion and attribution metrics (captured for every channel above):</li> <li>• Converted Users (unique), Total Conversions, Event (Primary), Conversion Rate (CVR), with three attribution models: view-through (impression-based), click-through (click-based), and in-session (conversion within 30 minutes of click), each over a configurable attribution window. Uplift measurement via control groups is also captured.</li> <li>• All events are tracked within the user profile and available for streaming to third-party systems. Users can search any active or previously run campaign to access historical communication data.</li> <li>• This data can be exported to customer service systems if needed, and we can store exact copies of communications or templates based on your requirements. MoEngage's Message Archival capability supports storing any communication sent to customers for later access by storing these in S3 and SFTP buckets. This helps with compliance activities.</li> <li>• <a href="https://www.moengage.com/docs/user-guide/campaigns-and-channels/email/analyze/email-analytics-and-info">https://www.moengage.com/docs/user-guide/campaigns-and-channels/email/analyze/email-analytics-and-info</a></li> <li>• <a href="https://www.moengage.com/docs/user-guide/campaigns-and-channels/sms-ms-and-rs/sms/analyze-sms-campaigns">https://www.moengage.com/docs/user-guide/campaigns-and-channels/sms-ms-and-rs/sms/analyze-sms-campaigns</a></li> <li>• <a href="https://www.moengage.com/docs/user-guide/campaigns-and-channels/mobile-push/analyze/push-analytics-and-info">https://www.moengage.com/docs/user-guide/campaigns-and-channels/mobile-push/analyze/push-analytics-and-info</a></li> <li>• <a href="https://www.moengage.com/docs/user-guide/campaigns-and-channels/mobile-push/analyze/push-device-analytics">https://www.moengage.com/docs/user-guide/campaigns-and-channels/mobile-push/analyze/push-device-analytics</a></li> <li>• <a href="https://www.moengage.com/docs/user-guide/campaigns-and-channels/campaign-management-and-reports/message-archival/message-archival#message-archival">https://www.moengage.com/docs/user-guide/campaigns-and-channels/campaign-management-and-reports/message-archival/message-archival#message-archival</a></li> </ul> |
| 36 | Personalisation & Decisioning | The solution shall support dynamic personalisation of content, offers, subject lines, CTAs and message body. | C |  | <ul style="list-style-type: none"> <li>• MoEngage supports dynamic personalization across content, message body, offers, subject lines, and CTAs, all built on a single Jinja-based templating layer.</li> <li>• <b>Content &amp; Message Body</b></li> <li>• Personalization via @ key or Jinja, drawing on user attributes (name,</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 38 | Personalisation & Decisioning | The solution shall support real-time personalisation based on customer behaviour, campaign context and lifecycle stage. | C |  |  | <ul style="list-style-type: none"> <li>MoEngage supports <b>real-time personalisation</b> through event-triggered campaigns, where the message content is generated live from the triggering action rather than pre-written with generic slots.</li> <li><b>Customer behaviour:</b> When a user performs an action, such as searching a Delhi to Mumbai flight, that action is captured as an event with its attributes (origin, destination, date, fare). An event-triggered Push, In-App, Email, SMS, or WhatsApp campaign fires instantly and pulls those exact attributes into the message via the @ personalisation key, so the notification references the specific flight the user just searched, not a generic fare promotion. The same mechanism powers real-time price-drop alerts on a previously searched route.</li> <li><b>Campaign context:</b> The triggered message adapts to where the user already is in their journey. Using Flows with real-time conditional branching, MoEngage checks live journey state before sending, so a user already in an active booking flow can be routed to avoid duplicate or conflicting messages, evaluated in real time rather than against a static list.</li> <li><b>Lifecycle stage:</b> The same triggering action produces different content depending on the user's current lifecycle stage, applied as a live condition alongside the trigger. A high-value frequent flyer searching that route can receive the fare with a loyalty perk, while a lapsed flyer receives the same fare with a win-back incentive, all resolved at send time.</li> <li>All three parameters operate on the same real-time trigger, layered as conditions on a single event, rather than as separate systems.</li> <li><a href="https://www.moengage.com/docs/user-guide/campaigns-and-channels/getting-started/message-personalization/overview">https://www.moengage.com/docs/user-guide/campaigns-and-channels/getting-started/message-personalization/overview</a></li> </ul> |
| 39 | Personalisation & Decisioning | The solution shall support send-time optimisation and channel preference /                                              | C |  |  | <ul style="list-style-type: none"> <li>MoEngage supports both send-time optimization and channel preference capabilities.</li> <li><b>Send-Time Optimization:</b> Our AI engine, Merlin, analyzes each user's</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| 52 | Analytics & Reporting | The solution shall support scheduled reports, ad-hoc reports, data export and integration with BI / reporting platforms. | C |  |  | <ul style="list-style-type: none"> <li>MoEngage supports all four capabilities:</li> <li><b>Scheduled Reports:</b> Configurable reports with 100+ metrics can be scheduled and automatically emailed to specific users with customizable frequency (daily/weekly/monthly). Reports can be delivered in various formats (PDF, XLSX, HTML, CSV, TXT).</li> <li><b>Ad-hoc Reports:</b> Custom reports and dashboards can be built through the platform. Users can create their own "studio" of reports, share them with others, and download comprehensive custom reports to CSV files. The reporting module allows complete customization of parameters and metrics.</li> <li><b>Data Export:</b> All data stored or computed by the platform (including CLV scores, segments, user attributes) can be exported through multiple methods: <ul style="list-style-type: none"> <li>Native Snowflake integration</li> <li>RESTful APIs for flexible data export with near real-time data flow</li> <li>Cloud storage integrations</li> <li>Manual downloads from the dashboard in CSV format</li> <li>SFTP interface for secure file-based data transfer</li> </ul> </li> <li><b>MoEngage Open Analytics:</b> MoEngage Open Analytics enables growth teams to access the latest data on the MoEngage platform in real time directly from the data storage. MoEngage allows customers to directly query the data warehouse and get desired data.</li> <li>PII-marked user attributes have restricted export access.</li> <li><b>BI and Reporting Platform Integration:</b> The platform integrates with BI tools including Tableau, Google Data Studio, and Microsoft Power BI through: <ul style="list-style-type: none"> <li>Robust API capabilities for real-time data integration</li> <li>Open Analytics feature that allows direct connection to backend tables for real-time querying without data pipelines</li> <li>Multiple native integrations with third-party analytics tools</li> </ul> </li> <li><a href="https://www.moengage.com/docs/user-guide/campaigns-and-channels/campa">https://www.moengage.com/docs/user-guide/campaigns-and-channels/campa</a></li> </ul> |

| 72 | Migration & Transition | The vendor shall support migration or recreation of typology rules, frequency caps, campaign governance rules and relevant historical campaign / delivery / reporting data, wherever feasible. | C |  |  | <ul style="list-style-type: none"> <li>MoEngage supports comprehensive migration of campaigns, frequency capping rules, and historical data from Adobe Campaign to our platform.</li> <li><b>Campaign Migration:</b> We migrate existing campaigns, templates, and content assets through a structured process. Our implementation team creates a mutually agreed migration plan, grouping campaigns based on volume, complexity, use cases, required integrations, channels in scope, and data configuration. This includes migrating email templates, push campaigns, and in-app messages with personalization placeholders designed to be future-proof.</li> <li><b>Frequency Capping:</b> Our Frequency Capping feature allows limits on the number of messages users receive during a specific period, from a particular channel (e.g., email), or across all channels. This prevents marketing fatigue and can be configured to match your existing governance rules.</li> <li><b>Historical Data:</b> Data migration covers three key areas: <ul style="list-style-type: none"> <li>1. User and user attributes</li> <li>2. Events and event attributes</li> <li>3. Campaign data</li> </ul> This is achieved via flat files and APIs, including support for all integrations. Historical interaction events (opens, clicks) can be imported to align with schema and naming conventions.</li> <li><b>Typology rules</b> are recreated as centrally enforced MoEngage governance rules, applied consistently across all IndiGo communication types.</li> <li><b>Campaign governance rules</b> (maker-checker approval, RBAC, suppression logic) are recreated natively within MoEngage's governance model.</li> <li>Historical reporting data is not natively migrated as live reportable data inside MoEngage. Standard practice is to export the historical Adobe Campaign dataset to IndiGo's data warehouse (or via MoEngage's data lake integration) for reporting continuity, while MoEngage begins tracking new events from go-live.</li> </ul> |

## II. Non-Functional Detailed Requirements

| Sl. No | Requirement Area                    | Non-Functional Requirement                                                                                                                                                             | C | PC | N C | Vendor Remarks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|----|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1      | Platform Architecture & Scalability | The solution shall be hosted on a modern, enterprise-grade cloud infrastructure with modular, API-first architecture capable of supporting high-volume marketing automation workloads. | C |    |     | <ul style="list-style-type: none"> <li>AWS-hosted microservices architecture: each core capability (Push, Email, SMS, Analytics, Segmentation, Flows/Orchestration) runs as an independent, containerized service, monitored and scaled in isolation - a fault or load spike in one channel doesn't touch the others</li> <li>API-first: REST APIs for data in/out, a webhook-based streaming framework, SDKs for web/app, and 200+ pre-built connectors, plus native GCP/Azure/Snowflake/Databricks integration paths</li> <li>Proven at enterprise scale today: 1,200+ customers, 1.5B+ daily active user profiles, 1+ trillion data points processed monthly, 4B+ messages/day, across 40+ countries - this isn't a greenfield architecture claim, it's the current production footprint</li> <li>Six-region AWS footprint including a dedicated India data center (Mumbai), giving IndiGo an in-country option without a bespoke build</li> <li><a href="https://trust.moengage.com/">https://trust.moengage.com/</a></li> <li><a href="https://www.moengage.com/service-availability/">https://www.moengage.com/service-availability/</a></li> <li><a href="https://moengage.com/docs/api/introduction">https://moengage.com/docs/api/introduction</a></li> <li><a href="https://moengage.com/docs/developer-guide/introduction">https://moengage.com/docs/developer-guide/introduction</a></li> </ul> |
| 2      | Platform Architecture & Scalability | The solution shall support horizontal and vertical scalability to handle large-scale campaign execution, high communication                                                            | C |    |     | <ul style="list-style-type: none"> <li><b>Horizontal scaling mechanism:</b> stateless microservices sit behind Elastic Load Balancers inside AWS Auto Scaling Groups that react to real-time load metrics (CPU, queue depth). New</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|  |  |                                        |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--|--|----------------------------------------|--|--|--|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  |  | volumes and multiple concurrent users. |  |  |  | <p>instances provision within seconds of a detected spike, before burst traffic actually lands</p> <ul style="list-style-type: none"> <li>• <b>Vertical scaling:</b> individual service tiers (e.g., the segmentation/data-store layer) scale by node class upsizing in addition to node addition - used where per-node performance matters more than raw node count</li> <li>• <b>Planned vs. unplanned demand:</b> capacity is pre-warmed ahead of known peaks (IndiGo's festive-season fare sales, schedule-change notification bursts) and scales reactively for unplanned spikes (flash sales, weather-disruption alert floods), governed by defined autoscaling SLAs rather than best-effort</li> <li>• <b>Large-scale campaign execution:</b> 100+ campaigns executing simultaneously trigger automatic compute provisioning with distributed parallel processing - no scheduled-time backlog. Concurrent active journey orchestration is proven at 800+ in production for the largest tenants, well above a typical single-airline requirement</li> <li>• <b>High communication volumes:</b> push scales to 10M+/minute (200K/min default), email to 1M+/minute (220K/min soft default), SMS to 60K/minute - each channel is an independently scaling microservice, so a peak email blast for a fare sale never degrades push delivery, SMS, or dashboard responsiveness</li> <li>• <b>Multiple concurrent users:</b> unlimited concurrent platform users with no performance degradation or per-seat cost penalty; proven at 500+ concurrent users for large global marketing teams, with analytics queries architecturally isolated from campaign-authoring operations so heavy reporting load doesn't slow down someone building a journey</li> </ul> |

Changelogs provided for SDK releases.</li> <li>• <b>Administrator Training:</b> Full platform training provided post-launch at no additional cost, available anytime during contract length. New team members receive access to training with each product release.</li> <li>• <b>Knowledge Transfer:</b> Onboarding, workshops, and post-implementation sessions included to ensure full solution management capability.</li> <li>• <b>Technical Documentation:</b> Interactive API/SDK/Partner Integration documentation publicly available, including authentication, endpoints, and data models.</li> <li>• - <a href="https://www.moengage.com/whats-new/#all-updates">Product Updates:</a></li> <li>• <a href="https://www.moengage.com/whats-new/#all-updates">https://www.moengage.com/whats-new/#all-updates</a></li> <li>• - <a href="https://moengage.com/docs/developer-guide/release-notes/subscribe-to-moengage-sdk-releases/subscribe-to-moengage-sdk-releases">Release Notes:</a></li> <li>• <a href="https://moengage.com/docs/developer-guide/release-notes/subscribe-to-moengage-sdk-releases/subscribe-to-moengage-sdk-releases">https://moengage.com/docs/developer-guide/release-notes/subscribe-to-moengage-sdk-releases/subscribe-to-moengage-sdk-releases</a></li> <li>• - <a href="https://moengage.com/docs/api/introduction">API Documentation:</a></li> <li>• <a href="https://moengage.com/docs/api/introduction">https://moengage.com/docs/api/introduction</a></li> <li>• - <a href="https://status.MoEngage.com/">Platform Status:</a></li> <li>• <a href="https://status.MoEngage.com/">https://status.MoEngage.com/</a></li> </ul> |
| 18 | Data Residency | All IndiGo customer and business data shall be stored and processed within India, unless explicitly approved by IndiGo in writing. | C |  | <ul style="list-style-type: none"> <li>• MoEngage provides contractually committed data residency within India for IndiGo's production environment, aligned with the requirements of the Digital Personal Data Protection (DPDP) Act 2023 and IndiGo's data sovereignty mandate.</li> <li>• <a href="https://www.moengage.com/docs/user-guide/data/key-concepts/data-centers-in-moengage">https://www.moengage.com/docs/user-guide/data/key-concepts/data-centers-in-moengage</a></li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

### III. Vendor Capability and Information solicited.

All the below mentioned requirements have been covered in the deck attached [here](#).

Vendors to provide their organization capabilities & services specifically in Airlines.

#### **Non-Commercial**

Vendors shall provide details on the proposed platform architecture, deployment model, security controls, scalability, integration approach, product capabilities, assumptions, exclusions and dependencies. Vendors should also highlight any additional features or recommendations beyond the RFP scope that may add value to IndiGo's customer engagement, retention, lifecycle marketing and revenue objectives.

#### **Project Governance and Methodology**

Vendors shall share the proposed project governance structure, execution methodology, team structure, roles and responsibilities, project management tools, risk / issue / dependency management approach, escalation mechanism and reporting cadence.

#### **Implementation Plan**

Vendors are required to provide a clear phase-wise implementation plan for the proposed Marketing Automation / CRM platform. IndiGo expects the implementation to be completed within **12 to 16 weeks from the date of contract award / project kick-off**, unless otherwise mutually agreed on the basis of solution complexity, integration dependencies and migration scope.

#### **References and Proven Scale**

Vendors shall provide top enterprise customer references, preferably from airline, travel, hospitality, OTA, retail or high-volume digital businesses, along with implementation timelines, largest deployment supported, communication volumes, customer profile scale and measurable business outcomes delivered.

#### **Annexure – Architecture Checklist**

To be filled once shared with us as per the Query resolution.

#### **Annexure – Info Sec requirement**

[Here](#) is the Completely answered Cloud Evaluation Checklist.
