Legal Disclaimer

*Cognizant Technology Solutions India Private Limited, with its principal office located at Ground floor, SDB 1, Plot No. H-4, SIPCOT IT Park, Padur Post, Siruseri, Chengalpattu District 603103, Tamil Nadu, India ("Supplier" or "Cognizant") welcomes the opportunity to provide the services (the "Services") identified in the ITSM Automation – Direct channel (Website and App) Incident management for technical support (the "RFP") issued by InterGlobe Aviation Limited ("Client" or "*IndiGo*"). Client and Cognizant have entered into a Master Services Agreement dated 14th December, 2022 (along with any amendments, the "Agreement") defining each party's rights and obligations with respect to provision of services by Cognizant to Client. Notwithstanding any other terms set forth in the RFP or Cognizant's response, any Services awarded to Cognizant would be provided in accordance with, and subject to, the terms and conditions of the Agreement and one or more project-level documents entered into pursuant to the Agreement (collectively, the "Binding Agreements"). In the event that the Services merit modification of any terms and conditions of the Agreement, Cognizant is prepared to quickly finalize discussions with Client regarding such modifications. Cognizant hereby further clarifies that, notwithstanding any other term contained in the RFP or Cognizant's response to the contrary, (i) the parties' confidentiality obligations with respect to the RFP as well as the information contained in Cognizant's response shall be subject to the confidentiality obligations set forth under Clause 7 (Confidential Information)] of the Agreement, (ii) all confidential or proprietary information contained in Cognizant's response shall at all times remain the sole and exclusive property of Cognizant and may be used by Client solely for purposes of evaluation of Cognizant's response, (iii) other than the confidentiality terms set forth above, no term of the RFP or Cognizant's response is binding or intended to reflect a commitment by either party and (iv) Cognizant disclaims any representation, warranty, covenant or condition of any kind in connection with this RFP and/or the Services except as may be subsequently agreed as part of the express terms of the Binding Agreements.*

Executive Summary

Cognizant wants to thank IndiGo to provide an opportunity to respond to this opportunity for ITSM Automation – Direct channel (Website and App) Incident management for Technical support, Triage and Root cause Analysis.

Cognizant has more than 25+ years of specialized experience in Application managed services engagement across the globe and have successfully helped setup future proof delivery models incorporating GenAI for many of our esteemed customers worldwide.

Executive Summary : Our Solution aligned to IndiGo's Objectives

IndiGo 's Objectives

1. Improved Production Stability & Availability

2. Reduction in Incident Resolution Time (MTTR)

3. 24×7 Operational Coverage

4. Proactive Incident Prevention

5. Enhanced Transparency & Stakeholder Communication

6. Standardisation of Incident & Problem Management

7. Reduced Recurrence of Production Issues

8. Operational Efficiency Through Automation

9. Support for Business Growth & Digital Initiatives

10. Alignment with Deliveries & Sprint Cycles

11. Improved Business Continuity & Customer Experience

12. Observability for Web & Mobile Performance

13. NPS Analysis & CX-driven Incident Correlation

14. Code-Level Debugging & Deep RCA

Our Solution Levers — Aligned to IndiGo 's Objectives

Transition & Onboarding

Risk-mitigated onboarding via ADAPT framework — structured KT, hypercare & SLA baselining

JIRA + ServiceNow bidirectional integration — automated defect creation, status sync & closure tracking

AIOps & Full-Stack Observability

AIOps: Alert rationalization, event correlation & noise reduction across Datadog, AEM, Firebase

Real-time observability of website, mobile app, APIs & middleware — proactive degradation detection

Hourly smoke tests published; performance baselines & regression detection per release cycle

3S Framework — ZeroOps Delivery Model

Self-Service: AI chatbot , Workflow based automatic Incident handling

Self-Heal: real-time anomaly detection, circuit breakers, auto-RCA & autonomous remediation

Self-Adapt: certificate management, vulnerability remediation, proactive config adaptation

Agentic AI — Intelligent Operations

Agentified triage (<2s classification), Auto RCA (<30s), automated JIRA defect creation

AI assisted code analysis. Code-level debugging across .NET, React, React Native, iOS & Android to identify root cause.

Problem Management, NPS & Governance

Permanent root-cause fixes via problem management — KEDB, CAPA and Recurrence reduction

NPS-incident correlation: map low scores to production incidents, outages & performance issues. Implement Permanent fixes and Proactive monitoring to reduce impact

SLA-based governance: steering committee, weekly ops reviews, stakeholder reporting & audit trail

24×7 Coverage & Stakeholder Communication

24×7 support across P1–P4 with on-demand P1 mobilization within 30 minutes

Structured stakeholder updates: estimated timelines, immediate impact reports & exec dashboards

Outcomes · 5 Years

40%+
MTTR Reduction
RFP target: 40% improvement

99.9%

Cognizant's Capability Assessment based on RFP inputs

Requirement Title	Description	Comments / RFP Response Requirements	Compliant	Partially Compliant	Not Compliant	Provider Comments
Domain Experience – ITSM Automation	Vendor must have delivered ITSM day to day task and automation solutions for large-scale enterprises in regulated industries.	Minimum 3 case studies of ITSM exposure to BAU issues and automation with triage, RCA, and SLA-backed operations.	Yes	-	-	ITSM Case Studies
AI/ML Expertise	Vendor must demonstrate hands-on experience of production support and AI-driven incident classification and RCA prediction.	Provide details of AI frameworks, algorithms, and at least 2 successful implementations.	Yes	-	-	RCA Case Studies
AIOps Platform Integration	Vendor must have experience integrating AIOps tools (Moogsoft, BigPanda, Dynatrace, ServiceNow AIOps).	Minimum 1 case study showing AIOps integration and RCA automation.	Yes	-	-	Covered under NeuroITOps & AIOPs based solution
Service Delivery Model	Describe end-to-end delivery approach including onboarding, implementation, and steady-state support.	Required	Yes	-	-	Covered Steady state BAU operating model
Team Structure & Roles	Provide proposed team structure including roles for AI engineers, integration specialists, and support.	Required	Yes	-	-	Covered under team structure
Workflow & SLA Management	Explain how workflows (triage, RCA, ticket lifecycle) are managed and monitored under SLAs.	Required	Yes	-	-	SLA Monitoring
Security & Data Privacy	Detailed approach for secure operations including RBAC, encryption, and compliance certifications.	Required	Yes	-	-	To be owned by as part of Security & Data privacy. Cognizant will adhere to the Security compliance requirements
Scalability & Flexibility	Explain how solution scales with incident volume, user concurrency, and new integrations.	Required	Yes	-	-	Covered under BAU solution scaling
Training & Enablement	Outline training approach for IT Ops, business stakeholders, and admin users.	Required	Yes	-	-	Covered under BAU training
Reporting & Analytics	Describe reporting capabilities for SLA adherence, RCA accuracy, and automation success metrics.	Required	Yes	-	-	Covered under Governance section

Our Understanding of the Scope

© 2026 Cognizant

Our Understanding of the Scope

Scope of work

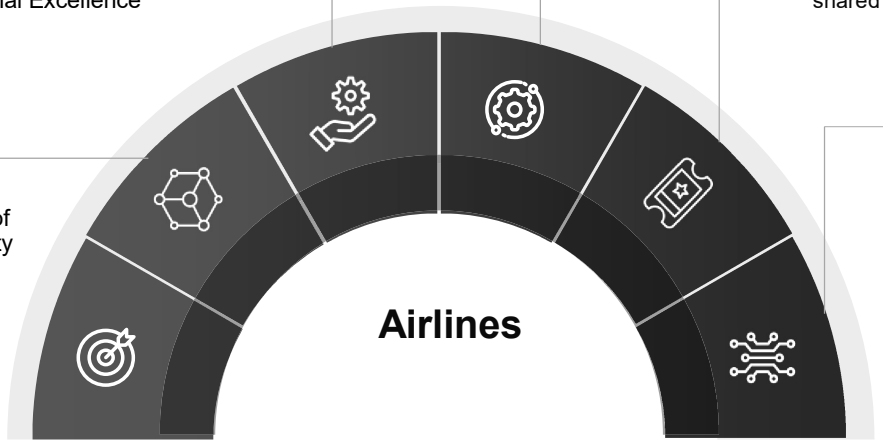

- Application Production Support (L2, L3)
- Incident Management & SLA Adherence
- 24x7 Support & Operational Coverage
- Ticketing, Tracking & Workflow Management
- Delivery Team Collaboration & Defect Management
- Stakeholder Communication & Reporting
- Proactive Monitoring & Incident Prevention
- Problem Management & Root Cause Analysis
- Continuous Service Improvement & Operational Excellence
- Business Continuity & Service Reliability
- Customer Experience & NPS Analysis
- Governance, Documentation & Compliance

Delivery Model

- Fixed Price Managed Services Model
- Contract duration of 3+1+1 years (3 months of KT + 36 months of Steady State with possibility to expand by 2years

Apps in Scope

- IndiGo website – micro-frontend React on Adobe AEM
- IndiGo mobile apps – React Native on Firebase, iOS & Android

Support Coverage

24x7x365 of Support Operations

24x7 – L1.5 , 16x5 – L2 +Oncall , 8x5 – L3 team +Oncall

Volumetric

6234 tickets for 12 months.(Mar 2025 – Feb 2026),

~500 tickets per month

Note : This is an indicative volume considered from Ticket dump shared for estimation now and this will be revisited post transition

Technology Skillset

- Support applications built on .NET, React, iOS, and Android.
- Web: Micro front-end architecture in React hosted on Adobe AEM. Front end architecture
- Mobile: React Native apps hosted on Firebase.
- ServiceNow(ITSM) configuration & scripting
- JIRA integrations & workflow configuration
- (Datadog): Monitoring/APM/logs/observability stack
- CI/CD (Jenkins)

Out Of Scope

- L1- User-facing help desk support
- DR, Security baselines, Patching and Infra (Servers, DB, Network) are managed by the IMS partner. L2 vendor aligns to existing policies and participates in DR/BCP tests; Firebase/mobile backend ops align with platform owners.
- New feature development for website or app (beyond minor bug-fix / hotfix associated with incidents)
- Minor Enhancements : will be managed by IndiGo Product team scope
- Day-to-day ServiceNow platform support (platform admin and upgrades)

© 2026 Cognizant

Our Solution Approach

© 2026 Cognizant

Our solution approach is based on a 3-horizon road map for Direct channel AMS support aligned with IndiGo's vision

Horizon 1 (Transition)

- **Deploy a Risk-Mitigated Transition Framework:** Launch Cognizant's ADAPT methodology for a structured, phased transition covering analysis, due diligence, acclimatisation, process/infrastructure setup, and formal transition management.
- **Document Management :** Identify documentation gaps and knowledge gaps as part of transition and upliftment of the Knowledge artifacts.
- **SOP Genius:** Implement Agentic AI based SOP Genies tool that can review the historical tickets and create SOP documentation

Horizon 2 (BAU delivery)

- **Steady state Target Operating model :** Implement steady state Target Operating model.
- **Observability improvement :** Observability implementation in data dog for false alert reduction.
- **Debt Management** : Identification and fixing of debt in the systems Application landscape using AppLens™
- **AIOps based Automation using NeuroITOps :** Leverage AIOPs based model for event correlation, noise reduction , de-duplication & end to end deterministic automation
- **SLA Improvement** : Tracking of SLAs through Performance governance dashboard
- **Synergy with build teams** : Perform periodic reviews with build teams, knowledge transfer post new feature introduction.

Horizon 3 (Transformation)

- **Deploy Agentic AI & Autonomous Operations :** Fully implement Agentic AI for multi-step ticket resolution, workflow orchestration, enable self-adapting operations using Neuro AI and integrate AI-driven metrics into business KPIs and governance dashboards.
- **Scale GenAI & Agentic AI Use Cases** : Broaden GenAI and Agentic AI to handle complex incidents and service requests and escalations, driving automation and intelligent decision-making across the enterprise.
- **3S implementation** : Identify use cases to implement Self-Service, Self Heal and Self Adapt use cases to improve the overall AMS delivery model.

Transition

© 2026 Cognizant

Our proven Transition Methodology – ADAPT Framework

RFP Phase	Post Contract Award	Planning Phase		Transition Phase
A Analysis	**D Due Diligence**	**A Acclimatization**	**P Process Alignment, Planning & Governance**	**T Transition**
• Scientific model for application analysis of the application data to understand ticket types, derive pattern, and gain a level of understanding of support needs	• First-hand information gathering • Finalize solution • Validate the initial assumptions to refine the high-level transition plan	• Resource on-boarding • Overview of the Platform, Application landscape, Domain specific boot camps • Team building exercises	• People & Process alignment • Obtaining the required access • Detailed transition plan & Block SME Calendars • Templates & Processes	• Risk mitigated transition -> KA, Shadow and Reverse Shadow • Conduct hand off protocols • sign off for support ownership

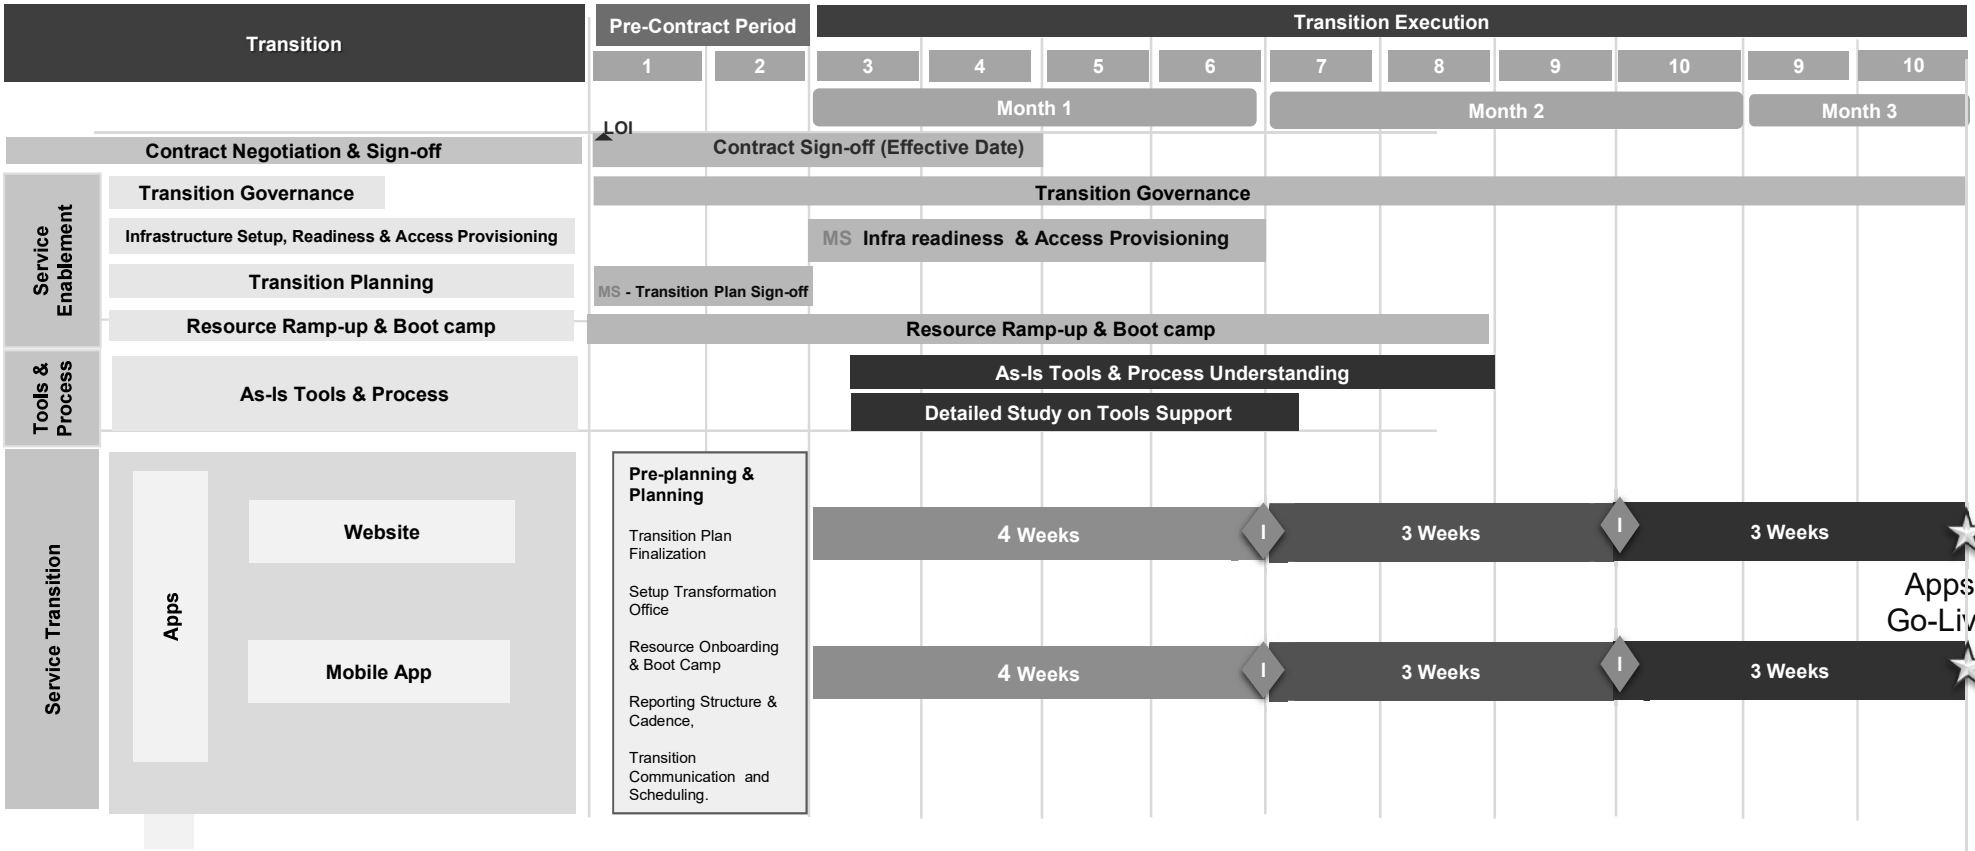

Transition Phase

	Planning	Knowledge Acquisition	Shadow Support	Reverse Shadow	Stabilization	Steady State
Phase Activities	• Confirm Scope • Prepare KT Plans with the help of / incumbent SMEs • Finalize KT document templates • Block SME calendars for KT • Agree on Transition scoring & acceptance criteria • Finalize the process to acquire knowledge and required access • Asynchronous KT where applicable • Access to existing Documentation and gap analysis	• Self study through current documents (SOP/Runbooks etc.,) • Acquire knowledge from incumbent teams. • Gather Workplace, Messaging & technology landscape, vendor mgmt., Support process • Create/ Update KT documentation • Understand SLA/ KPI & discuss • Update the Knowledge Repository	• Observe incumbent support team • Work on tickets with assistance from each service area SMEs • MIM process flow • Provide support on non-ticketing BAU activities • Refine Runbooks & SOP documentation	• Assume primary responsibility with mentoring by incumbent SME's • Resolve high priority tickets & Critical tasks alongside incumbent SME's • Capture current SLAs • Milestone completion approval from	• Complete end-2-end ownership for all in-scope support activities • Measure & baseline SLAs/KPIs (during stabilization phase) • Achieved performance of all Service Levels and KPIs over a period • Completion of milestone • Continous improvements	
Deliverables	• Detailed Transition Project Plan • Risks log (RAID Log) • Gating/Acceptance Criteria sign-off • KT Readiness Checklist • KT Performance tracker/ Report	• KT Documents (Runbooks ,SOPs) • Updated Transition plan • KT Playback (PPT) Session • KT Effectiveness scorecard • KT phase exit sign-off • Shadow Phase Plan	• Updated 2nd version KT Documents • Transition status report • Finalized SLAs/KPI Shadow Phase exit sign-off	• Final KT Documents • Transition status report • Signed-off Service Readiness • Signed-off Go-live checklist • Service Delivery reports	• Signed-off Acceptance per Service Area • Completion of all the agreed deliverables • Service Delivery Reports– Weekly & Monthly (SLA/KPIs)	
	Planning Exit Sign-off	**KT Exit Sign-off**	**Shadow Exit Sign-off**	**Rev. Shadow Exit Sign-off**

Transition plan for IndiGo Website and Mobile Applications

Legend : **Planning -** |Knowledge Transition | Shadow Support | Reverse Shadow |Toll-Gate/ Phase Exit | Go-live | Milestones- MS

© 2026 Cognizant

cognizant | IndiGo

Enabled by Cognizant Accelerators

Transition Effectiveness

- **Boot Camps –** Training to ensure common understanding of the Transition process and Client's business operation
- **Transition Toolkit –** Compilation of transition templates to be used during transition. Serves as source of truth during program lifecycle
- **Play Back sessions –**Weekly demonstration of understanding of topics to the client
- **Gate reviews –** Go-No/Go meetings conducted at the end of each phase

Transition Tracking and Progress

- **Status Reviews –** Conducted weekly to review the progress, risks and issues
- **Phase Exit checklists –** Exhaustive checklists for tracking the completion of each Transition phase
- **Metrics and SLAs** -tracked and published from the time Cognizant starts handling tickets

Transition Tools & Accelerators

Knowledge Management

- **GenAI-Based Transition Assist * -** IndiGo knowledge mining from tickets, SOPs, and documentation, generation of SOPs, runbooks, onboarding packs, Summaries KT sessions, SME walkthroughs, and code analysis. SME bandwidth savings by 30–50%. Accelerates readiness for steady state.
- **Knowledge Database –** Reuse and enhance the knowledge repository. Validate the article currency and create new articles as required
- **Cognizant CoE –** Leverage Standard Operating Procedures (SOP) with Cognizant Centers of excellence (CoE) teams for additional documentation as required

Knowledge Capture

- **Video and Audio –** Record KT sessions and training enabling playback for future reference, Gen-AI assisted transcripts
- **In-Person KT –** For critical areas facilitate face to face KT sessions
- **SOPs/Run Book – Gen-AI assisted *** creation of SOPs/Runbooks to enable documented evidences on process and procedures, further validated by SME's
- **Detailed Topic Books –** Customized Topic workbooks for each service line

Monitoring and Metrics are key to measuring Transition success

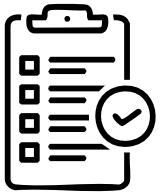

Transition Monitoring Process

Transition Scorecard

Transition checklist

Type	Metrics	Description
Session Completion	% of sessions completed	% of No. of Sessions completed vs. No. of sessions planned
Independent Resolution	% Assigned of Tasks	% of tasks completed without SME support during KT Phase (Shadow and Reverse Shadow)
Resolution Handling Efficiency	% Requests handled within the SLA	No. of tasks that met SLA / (Total tasks received*100)
Play back Presentations (KT Playback)	Min score of 3 on a scale of 5	• KT Playback on the complex /core functionalities • Score card on correctness & completeness of presentation on a scale of 5
Documentation	Number of KT(KA + SS + RSH) deliverables	Application handbook, SOP Doc (Functional/Technical/Architecture etc.) RAID Logs closure
KT Effectiveness	Overarching KT progress, Transition scorecard / SME feedback	Measure the effectiveness of transition of Cognizant's in-scope services
Resource Onboarding	Planned vs. Actual	This indicator tracks the planned versus the actual resource onboarding status, week over week, during the transition period

Key inferences from the IndiGo ticket data provided

We have reviewed 6229 incidents from Mar 2025 to Feb 2026 and below are the key inferences from the data

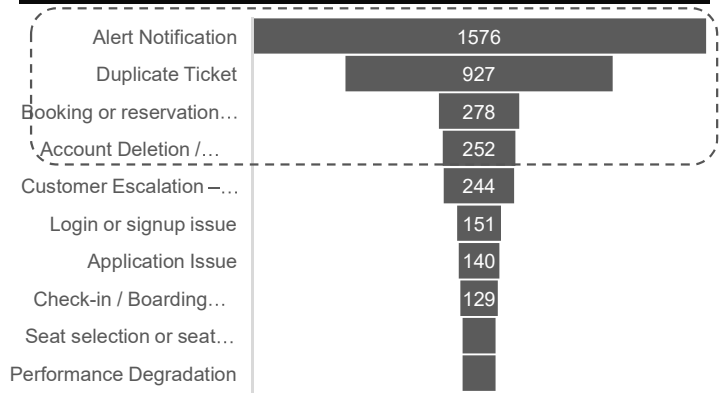

Monthly Incident Ticket Trend

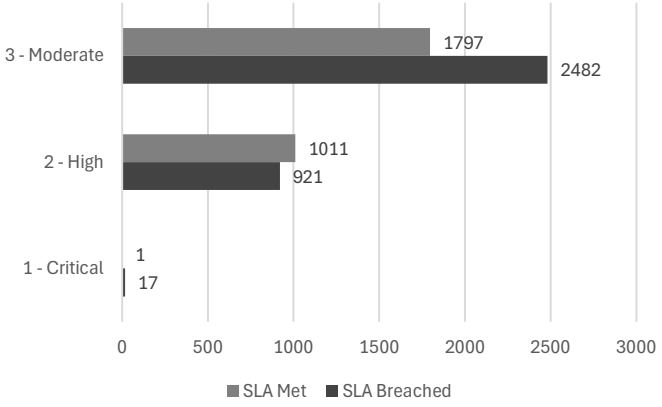

Priority wise ticket split

Ticket Distribution by Top Sub Category

Priority vs SLA Breach

Key Observations and Inferences

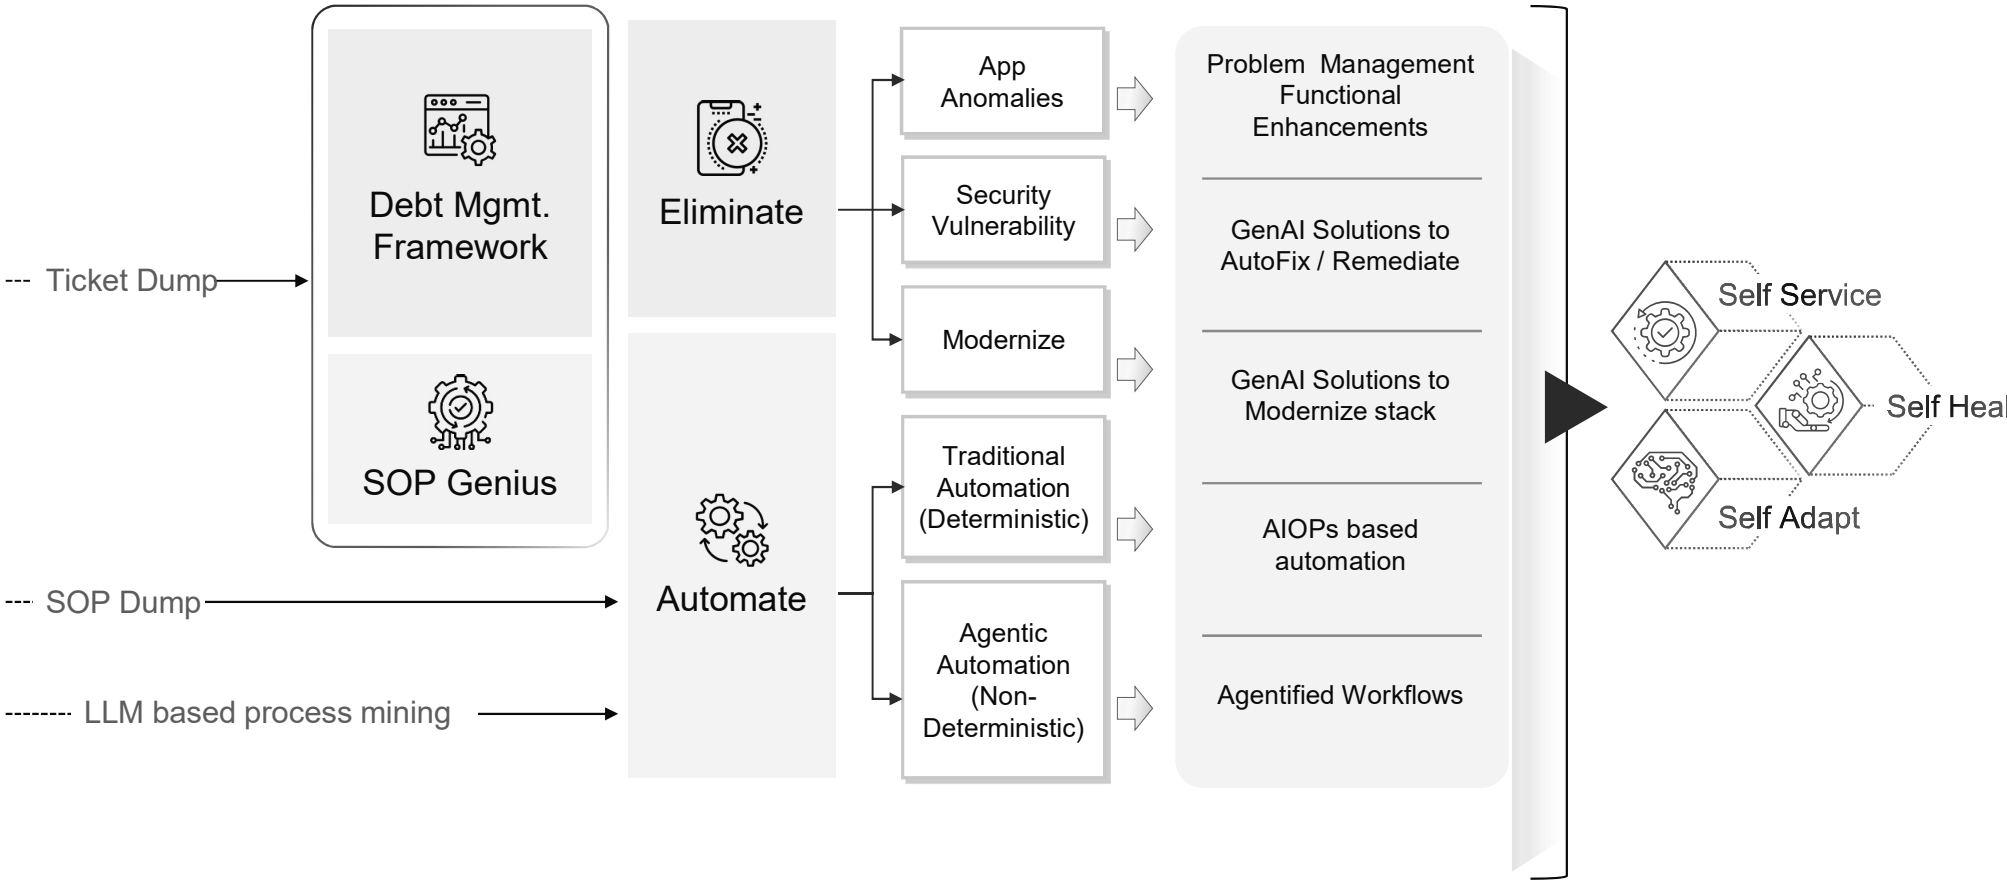

Key Observations

- Feb month peak is observed due to surge in Datadog, Alerts could be due to release activity or SN & Datadog integration

- Alert Notification alone is 25.3% of all tickets, entirely L1.5, driven by IBC Failure Alerts and Datadog Latency — every single one auto-resolves but is still manually closed, this is the top candidate for automation.
- Duplicate Ticket (14.9%)
- Booking/Reservation (4.5%) = 1,205 L2 tickets respectively are top eliminable candidates
- 68% are moderate tickets, 31% high and 1% critical tickets
- **55% tickets – SLA Breached 45 %- SLA Met**

Top Use cases

ELIMINATABLE USE CASES

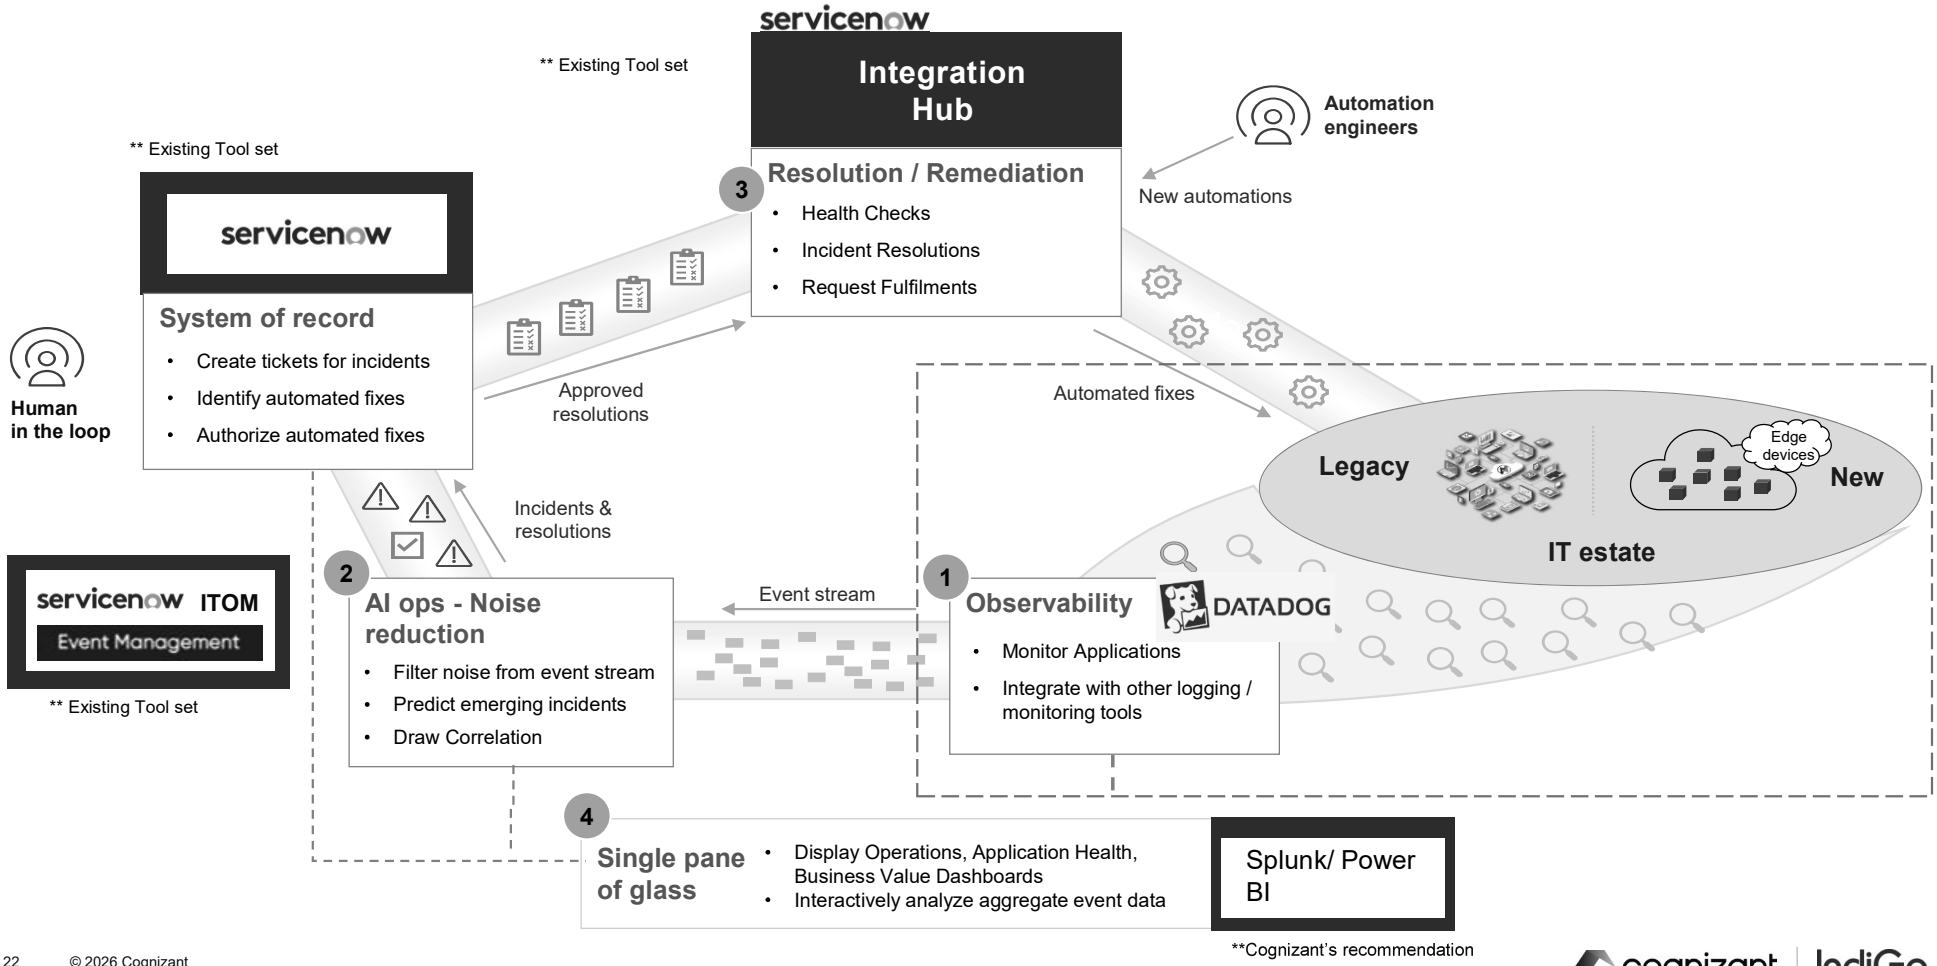

Usecase / Subgroup	Ticket %	Sample Scenarios (from Subgroup1 data)
Booking or reservation issue	**4.5%**	Incorrect change/cancellation fees shown at booking · Confirmation email not sent · Fare pricing mismatch between SRP and checkout · Meal/add-on not reflecting post-booking
Application Issue (5xx / 4xx)	**2.2%**	500 error on itinerary page · 504 Gateway Timeout on SSO signup · 4xx client errors on Travel Agent portal · Delayed flight info sync between Skyspeed and website
Check-in / Boarding Pass Issue	**2.1%**	Boarding pass not received after web check-in · Partial check-in allowed without clear UX indication · Scheduler-triggered BP generation not communicated to customer
Loyalty / IBC Issue	**0.9%**	BluChip points not reversed on Prime Pass cancellation · Promo codes applied incorrectly on redemption PNRs · Loyalty B2B service returning 500 errors
Seat Selection / Pricing Issue	**0.9%**	Seat fee discrepancy between seat map and final price page · Prime Pass charges applied incorrectly · LITE fare seat selection dropdown error
Baggage Allowance Issue	**0.9%**	Krabi sector showing 30kg instead of 20kg · Rescheduled Student Fare showing incorrect allowance · Email itinerary baggage field mismatched with check-in system
Fare / Pricing Issue	**0.9%**	Fare lock IT FOP mapping change · Mixed-fare itinerary (STRETCH + international) baggage confusion · SRP fare strip display alignment bug · Amount debited but booking pending
Payment / Refund Issue	**0.9%**	FLYMORE coupon not applying for international routes · Zero Cancellation Fee insurance not refunded on cancellation · Credit card auto-selected as default payment method

TOP AUTOMATABLE USE CASES

Usecase / Subgroup	Ticket %	Sample Scenarios (from Subgroup1 data)
Alert Notification	**25.3%**	IBC Failure Alert (kotak/sbi/idfc bank customers) · Datadog Latency Alert — API latency > 150ms · Datadog High Error Rate > 0.05% · Proactive threshold-going-to-be-breached alert · High 5xx Error Count spike
Account Deletion / Deactivation	**4.0%**	Customer requests account deletion for personal reasons · Agent workflow: disable account linked to email · Customer has duplicate accounts — disable one
Login or Signup Issue	**2.4%**	Authentication failure on agent login (STAW0003) · Customer unable to sign into account · OTP not received at login · Loyalty account not found — needs creation via Salesforce
Performance Degradation	**1.8%**	High response on apporiginbase microservice (9:22–9:32 AM) · High response across all App Gateways · Degradation on fetch-addons and checkin microservices
Performance Monitoring	**1.7%**	High response times on INT-1 apporiginbase · Traffic drop on INT1 cluster · High 4xx errors on b2c-hotel-prod · Latency observation on booking microservice
Spike Alert	**1.8%**	Intermittent spike on fetch-addons (11:17–11:27 AM) · Latency spike on fetch-addons at 2:45 AM · Ancillary failure during add-on processing · Response time spike on booking service

Integrated with IndiGo's existing tools, Cognizant Neuro® IT Operations Framework providing Full Stack Observability to enable Self-Healing, Automation and Remediation

** Tools applicability to be decided during Tools assessment phase*

© 2026 Cognizant

cognizant | IndiGo

Transition | BAU | Transformation

Scaling of Solution for Incident Volume spikes, User concurrency and Integration failures

Our role is to detect, predict, respond and autonomously remediate. Scaling and integration solutions are owned by IndiGo's team. We own the operations layer: AIOps, full-stack observability, Agentic AI triage, and Self-Heal automation.

01 Incident Volume Spikes
AIOps - Noise Control - Self-Heal

AIOps Noise Suppression
› Correlates alerts across Datadog, AEM & Firebase
› Deduplicates false positives in real time
› Actionable incidents only reach the queue

Full-Stack Observability
› Real-time health visibility across website & app
› Flags degradation before customers are impacted

Self-Heal — Auto Remediation
› Auto-retries, rebounces & connection flushes
› Incident closed without ticket if resolved
› Escalates with full context if auto-heal fails

Escalation to Delivery
› Structured JIRA with RCA, logs & impact raised
› Volume evidence documented for SLA arbitration

02 User Concurrency Issues
Observability - Agentified - Self-Heal

Observability — Instant Pinpointing
› Traces slowness to API, DB, AEM or network layer
› Sub-second root cause identification
› No manual log-digging during war-room

Agentified Triage — Zero Manual Start
› Auto-detects concurrency degradation patterns
› Opens bridge, notifies stakeholders, routes to resolver
› No human needed to initiate the response

Self-Heal — Thread & Cache Recovery
› Clears hung threads, flushes cache automatically
› Restarts affected service component if safe
› Applies workaround while delivery team fixes root

Track to Closure
› Owns JIRA to delivery team — no drop-off
› Validates against observability baseline before close

03 Integration Failures
Agentified - Self-Heal - RCA Auto

Agentified Detection — Before Users Notice
› Monitors all integration endpoints continuously
› API timeouts, auth failures, payload mismatches auto-detected
› Alert raised before tickets or complaints arrive

Self-Heal — Known Pattern Auto-Fix
› GDS drops, IBC failures resolved via ITPA rebounce
› Auto-retry and reconnect workflows execute instantly
› Incident closed without raising a ticket if resolved

Auto RCA — Ready for Delivery Team
› Correlates API logs, trace IDs & deploy history
› Structured RCA packaged at incident declaration
› No back-and-forth — delivery team gets full context

3rd Party & Post-Deploy Hypercare
› We own vendor coordination & resolution tracking
› Observability + Self-Heal rules configured on go-live

AIOps Noise Reduction Alert Correlation

SOPGenius: Accelerating IT Efficiency with AI-Generated SOPs

SOPGenius: Revolutionizing IT Ticket Resolution with AI-Generated SOPs. It follows below steps

Learn from Resolutions: SOPGenius analyses resolved IT tickets, extracting step-by-step procedures documented by your experts.

Train the Model: Our cutting-edge LLM model learns from these real-world resolutions, capturing domain-specific knowledge.

Instant SOPs: When a similar ticket arises, SOPGenius suggests the best approach, ensuring consistency and efficiency.

	Pre-Transition	Transition	Steady State	Incremental
Current State – Human Driven User Support	• No visibility on SOP counts • Complete reliance on ticket data for estimate • Reliance on existing L2 (If any) for SOPs	• SOP generation based on input from incumbent, L2, KT recordings	• Left shift through Debt Assessment • Discussion with L2 on SOP creation • Slow left shift and SOP count = heavy L2 team • Special effort for problem ticket elimination	• Max. 10%* YoY left shift • Additional automation need, lower SOP execution • Delayed margin optimization, cost reduction
Future State – AI Driven User Support	• SOP generation tool to scan ticket dump • Initial SOP count numbers available • Identified areas for SOP review and targets • Better control on scope & bid vs deed	• L1 & L2 both working on SOPs • More SOP# created, focus on monitoring	• Tool to generate SOP from ticket dump • Reduced TAT for left shift/SOP creation • Strong SOP model, robust problem elimination	• Improved ticket quality = accurate SOPs • Strong SOP base, reduced automation need for SOP • Faster left shift, better margins

Key Benefits

Quality Assurance

Maintain high-quality documentation across your organization.

Effort Reduction

Say goodbye to manual SOP creation - SOPGenius does the heavy lifting!

Value

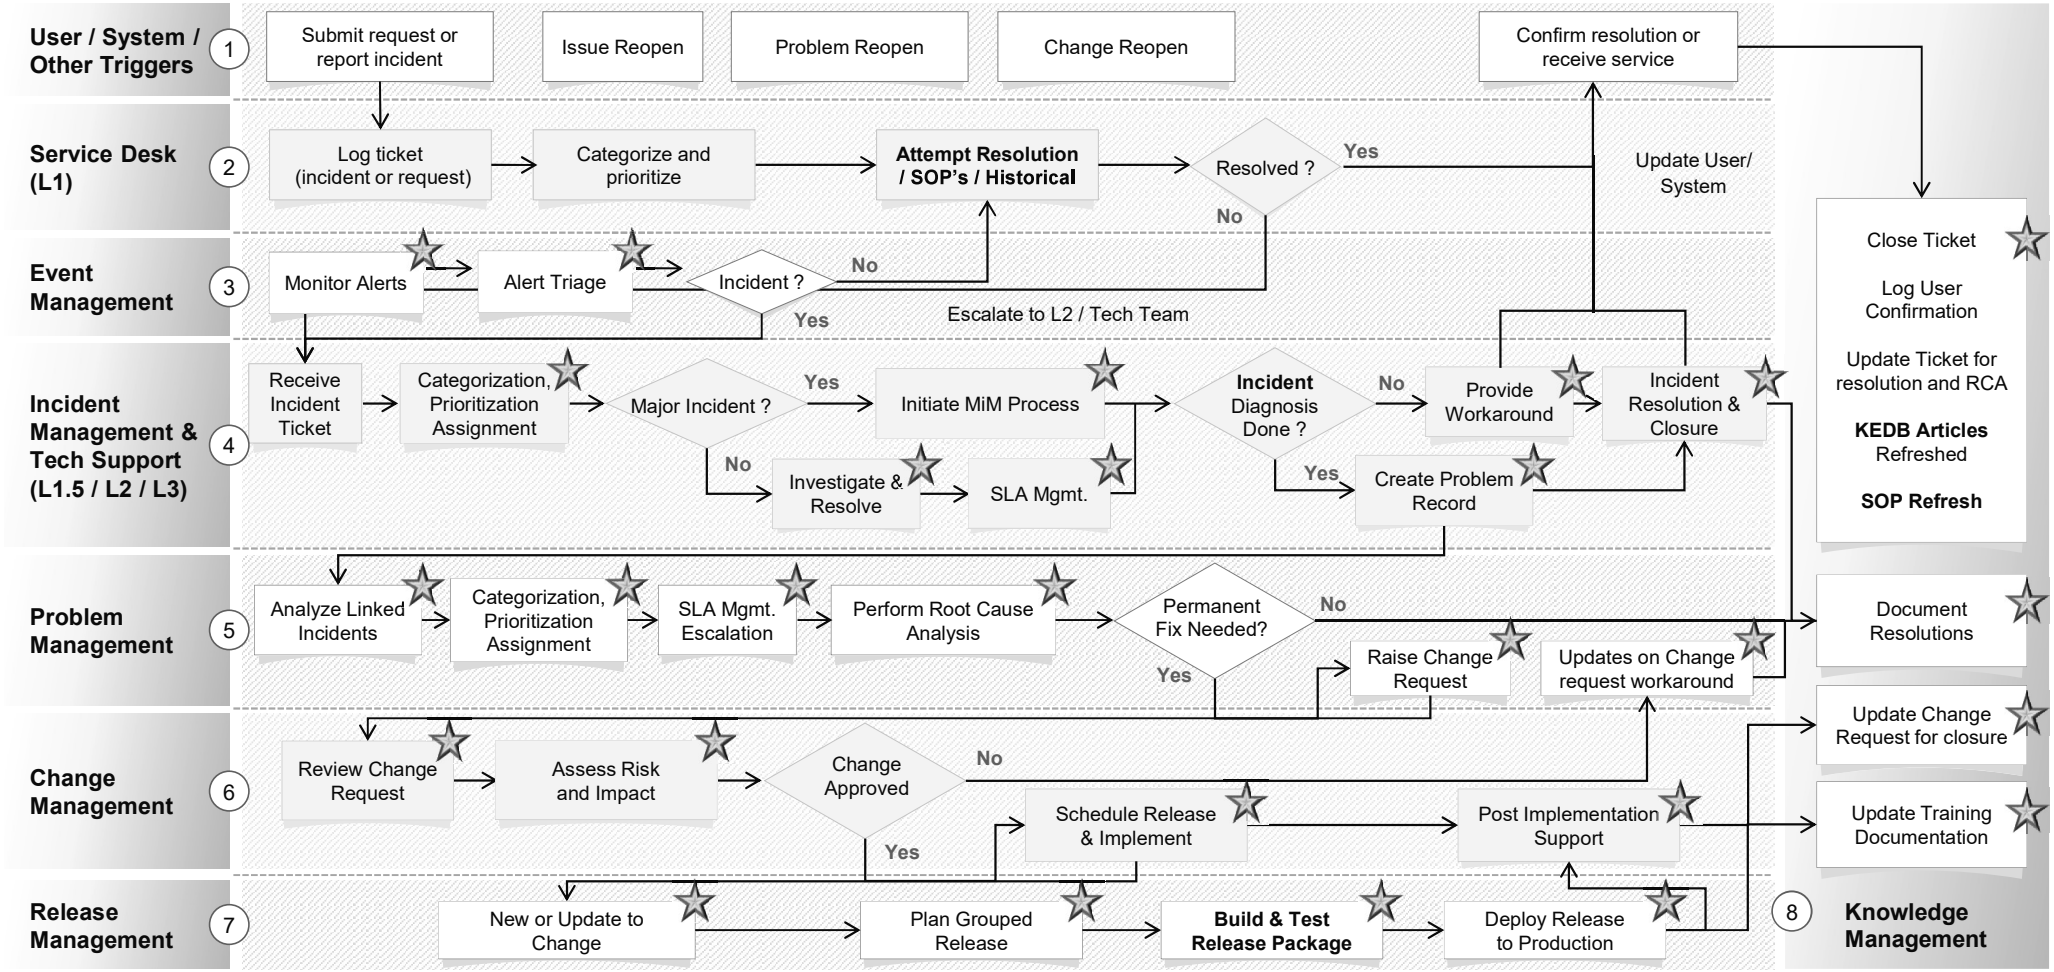

Deliver value to Discover by streamlining processes and reducing costs.

Operational Autonomy Maturity: Self-Service → Self-Heal → Self-Adapt

The 3S ways of working will progressively mature 's AMS landscape and move towards autonomous ways of working. It will enable to evolve from manual service interactions to intelligent, adaptive systems that learn and improve over time while maintaining human governance and compliance.

Self-Service

User resolves without agent

Enable end users and technical teams to directly access the resources and tools they need, reducing reliance on support channels and improving agility.

- Empower users with intuitive, AI-enhanced interfaces.
- Enable access to knowledge bases, virtual agents, and guided workflows.
- Reduce dependency on service desks and manual interventions.

Self-Heal

System detects and heals itself

Automatically detect and resolve incidents proactively, minimizing downtime and improving system resilience.

- Automate resolution of known issues using AI Ops and GenAI.
- Trigger remediation scripts and workflows based on telemetry and incident patterns.
- Integrate with observability platforms for real-time healing.

Self-Adapt

System learns and adjusts proactively

Continuously optimize performance based on usage patterns to enhance speed, quality, and cost-efficiency.

- Systems learn from operational data and user behavior.
- Dynamic adjustment of thresholds, rules, and workflows.
- Continuous improvement through feedback loops and GenAI insights.

Cognizant's inhouse Agents will be customized to accelerate Agentic AI adoption for IndiGo

PLATFORM AI AGENTS Cognizant NeuroITOps				
Category	**Agent**	**What it does**	**Impact**	**Relevance**
Orchestration	**SOPGenius** *SOP & Incident Automation*	Automates SOP creation and incident management for consistent, efficient IT operations.	Consistency ↑ Compliance ↑ Risk ↓	Auto-generate runbooks and SOPs for P1/P2 incidents; enforce ITIL-aligned resolution steps.
Incident Mgmt	**MiM** *Major Incident Management*	Orchestrates proactive response and resolution for major IT incidents, ensuring rapid recovery.	MTTR ↓ Escalation speed ↑ Manual effort ↓	Drive war-room coordination for booking/payment outages; auto-notify stakeholders via ServiceNow.
Root Cause	**Auto RCA** *Automated Root Cause Analysis*	Automatically identifies root causes of IT incidents to accelerate resolution and reduce manual effort.	Resolution time ↓ Accuracy ↑ Recurrence ↓	Correlate logs, APM alerts & deployment history for web/app incidents; push RCA to ServiceNow.

Support Specific AI Agents				
Category	**Agent**	**What it does**	**Impact**	**Relevance**
Monitoring	**Monitoring Agent** *Performance & Availability*	Monitors critical applications and services to ensure performance, availability, and timely issue detection.	Uptime ↑ Detection speed ↑ MTTD ↓	24x7 monitoring of website, app, APIs & AEM; proactive alert before customer impact.
Log Analysis	**Log Analysis Agent** *Insight & Troubleshooting*	Analyzes logs for insights and troubleshooting across application and infrastructure layers.	Debug time ↓ Accuracy ↑ Manual effort ↓	Parse Datadog/AEM/Firebase logs for crash reports, error spikes & latency patterns.
Impact Analysis	**Impact Analysis Agent** *Change Risk Assessment*	Analyzes the impact of changes or incidents on downstream services before and after deployment.	Change risk ↓ Release confidence ↑	Assess deployment impact on booking funnel, payment gateway & loyalty integrations.
Resolution	**Resolution Recommendation Agent** *Incident Fix Suggestions*	Recommends resolutions for incidents and problems based on historical patterns and KEDB.	MTTR ↓ First-time fix rate ↑	Suggest fixes for recurring incidents; feed recommendations into ServiceNow resolution notes.
Database	**DB Intelligence Agent** *Database Insights*	Provides intelligence and insights for database management, query performance, and anomaly detection.	Query perf ↑ DB incidents ↓	Monitor booking DB, identify slow queries & auto-raise JIRA for DBA team.
Reporting	**Report Generation** *Operational Dashboards*	Generates business reports and builds ad-hoc SQL queries based on user-defined criteria.	Reporting time ↓ Stakeholder visibility ↑	Auto-generate weekly SLA, MTTR & NPS-incident correlation reports for Digital leadership.

Target Efficiency Gain

Transition | BAU | Transformation

The AMS efficiency gain targets ~28% FTE reduction over 5 years, driven by ticket reduction through Problem remediation, automation via Neuro® IT Ops and AI agents-based Automation

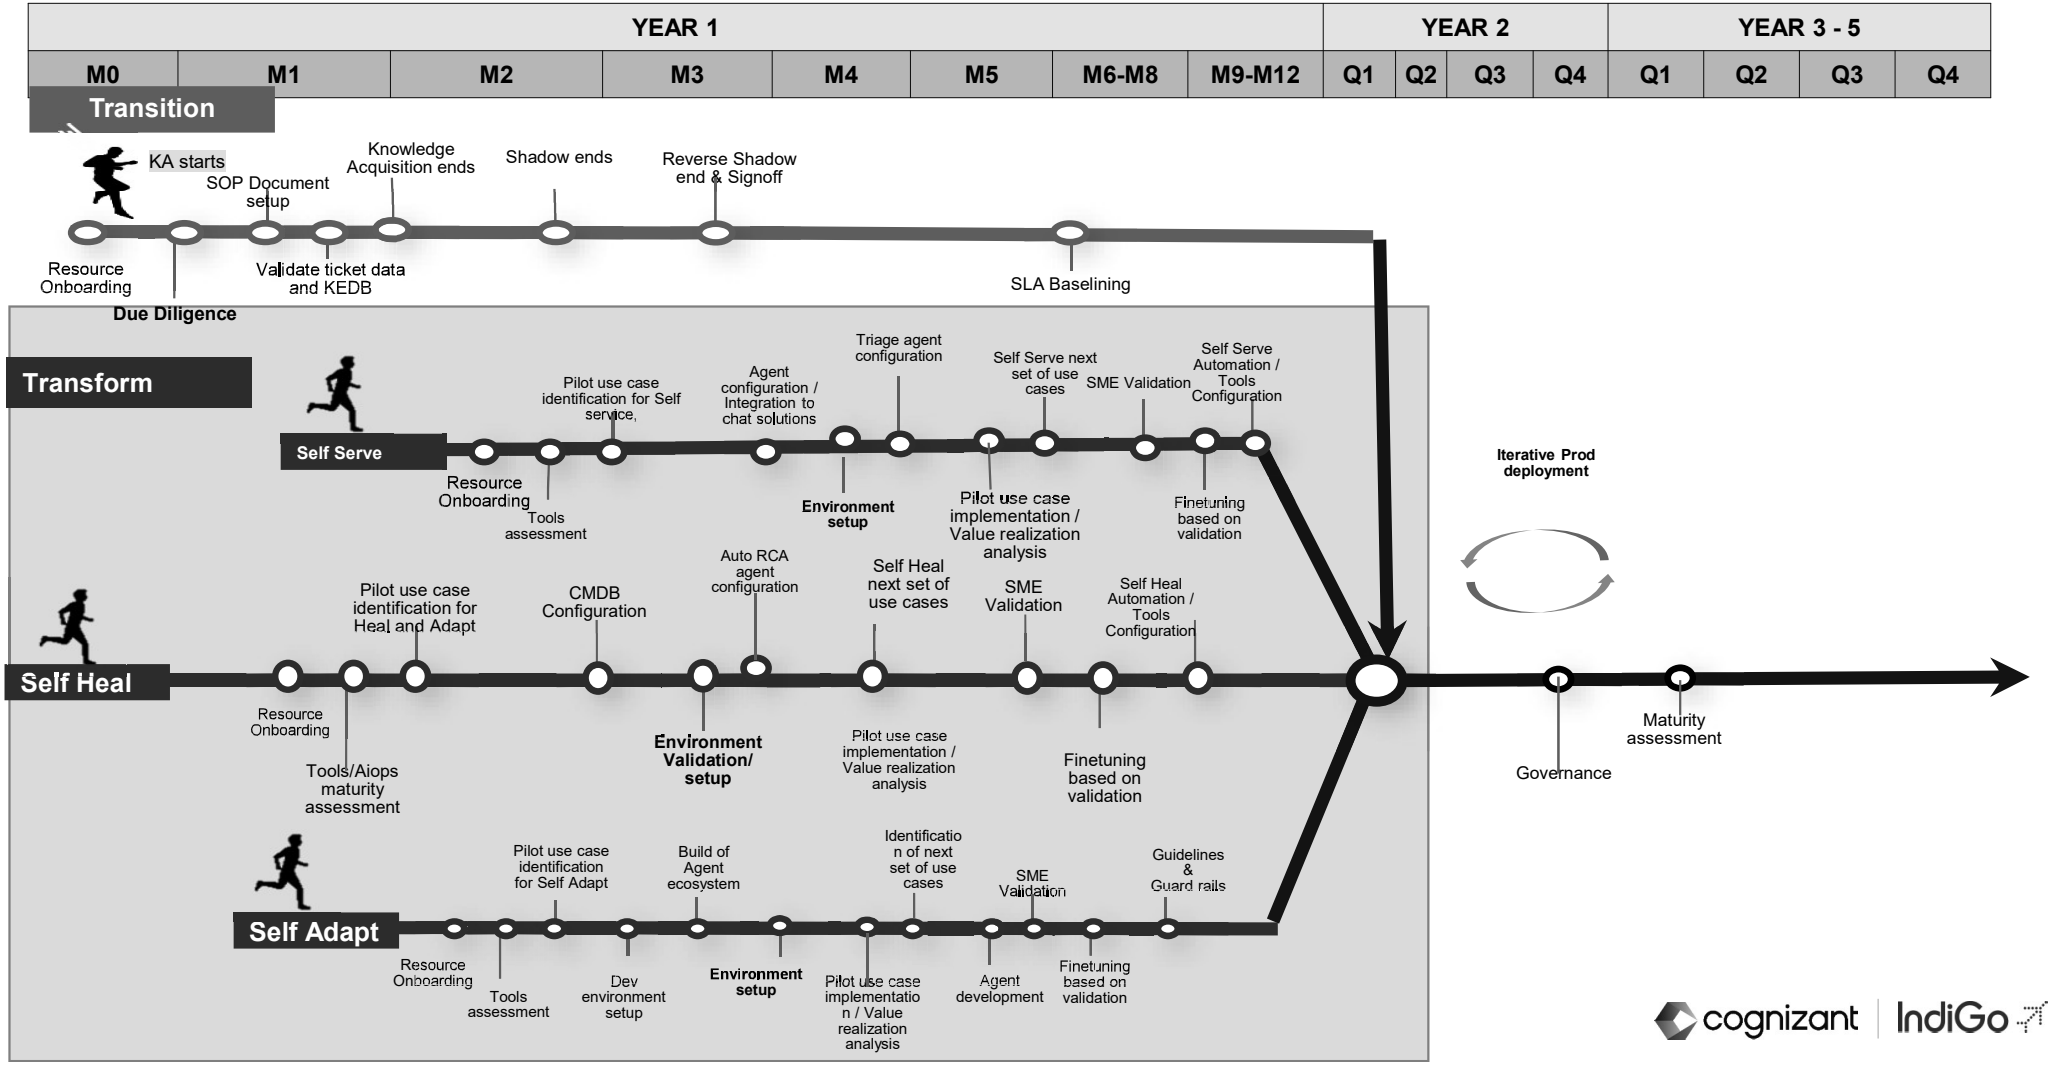

Levers For Efficiency Gains	Key Tenets	Efficiency Gains
Elimination	Eliminating tickets through bug fixes and problem remediation	5%
Neuro IT Ops™ - Self Healing/ AIOps/ Automation	IT Process Automation including AIOps based Automation for event de-duplication, noise reduction, event correlation and Automation using Cognizant's Neuro® IT Ops framework	9%
Agentic AI – 3S based delivery model	Agentification for 3S based delivery model	8%
Industrialisation and Improved Utilisation	Left shift / Operational Efficiency	5%
	Regular review of volumes and to drive utilisation improvement	
Ticketing Standardisation	Ticketing standardisation into Service Now for all applications; Implementation of Auto ticketing , CMDB and integration of Monitoring tools (Splunk, Datadog)	1%
Total		**28%**

- *Efficiency Gains are based on current details in RFP, will need to be validated / baselined during due diligence.*
- *These are already factored in the solution and pricing. Cognizant will revalidate these efficiencies during the Solution Refinement phase.*

Cognizant Team Structure & Escalation Matrix

APPROACH

- 4-Tier governance model
- Flexibility to change - course correction & demand management
- Active executive sponsorship
- Transparent reporting hierarchy

ORGANIZATIONAL ELEMENTS

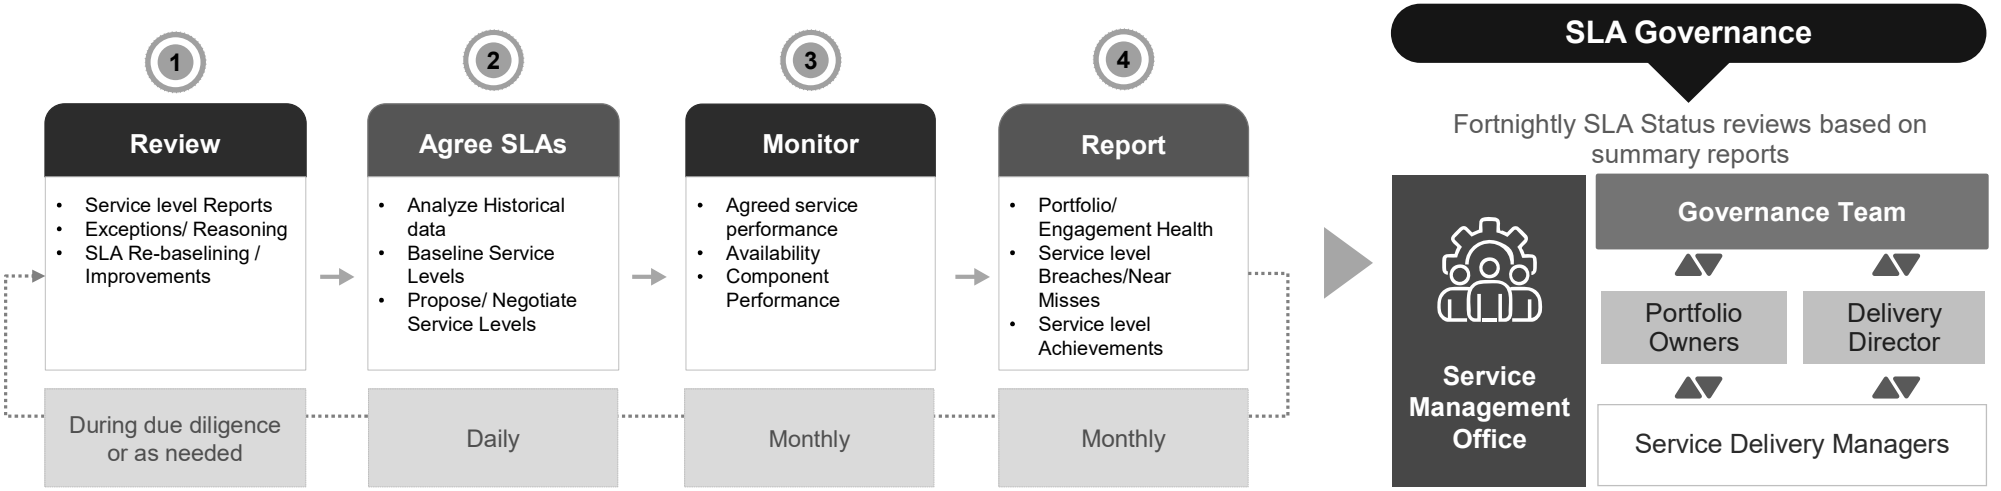

- Defined participants
- Well defined roles & responsibilities at both region and program level
- Properly staffed

INTEGRATED PROCESSES

- Well defined processes
- Specifies interactions within & between regions
- Process Guides agendas, planning & escalations

Service Level methodology

Below are list of SLAs Cognizant will track as part of this Scope

SLA Metrics	Response Target
Service Availability	≥99.9%
Incident Classification Speed	≤2 seconds (95% cases)
RCA Generation Time	≤30 seconds (standard incidents)Within 2 hours
Schedule Variance	≤5%
MTTR Reduction	≥40% vs. baseline

Priority	Definition	Response Target	RCA Submission
P1	Booking/payment outage, critical business impact	Immediate (war-room within 15 min)	Initial within 2 hrs; Full within 4 hrs
P2	Partial service degradation, high business impact	Within 30 minutes	Within 6 hrs
P3	Medium impact, limited user effect	Within 2 hours	Within 20 hrs
P4	Low impact, cosmetic or minor issues	Within 4 hours	Within 20 hrs

* Cognizant will baseline the metrics for 90 days. Following that, Cognizant will evaluate and mutually agree with and finalize.

© 2026 Cognizant

Proposed SLA's (1/2)

Cognizant will baseline the metrics for 90 days. Following that, Cognizant will evaluate and mutually agree with and finalize.

S. No	Measurement	Metric Type	Definition	Target	Severity Level
1.	ITSM Automation Service Availability	Availability	Metric: % of Uptime Formula: Uptime % = {1- [(Total Downtime) / (Total Time – Planned Downtime)]} *100 Services must be available 24x7 for triage, RCA, and ticket automation operations. Total Downtime: Cumulative time services are unavailable for use by IT Ops teams. Planned Downtime: Scheduled maintenance time agreed upon by and the service provider. Total Time – 24 X 7 measured over a period of month. Period of Measurement: Monthly Penalty Clause: For each additional drop of 1% in performance below 98%, an additional 0.5% of the Quarterly Payment shall be levied as Liquidated Damages.	>= 99.9%	0
				<99.9% and >= 99.5%	4
				<99.5% and >= 99.0%	5
				<99.0% and >= 98.5%	6
				<98.5% and >= 98.0%	7
				<98.0%	8

S. No	Measurement	Metric Type	Definition	Target	Severity Level
1.	Project Management	Schedule Variance (SV)	Metric: % Variance between allotted time for development / change and estimated time Formula: SV = (Actual Elapsed Time – Estimated Elapsed Time) /Estimated Elapsed Time Period of Measurement: Quarterly	<= 5%	0
				>5%	4

© 2026 Cognizant

Proposed SLA's (2/2)

Cognizant will baseline the metrics for 90 days. Following that, Cognizant will evaluate and mutually agree with and finalize.

S. No	Category/ Component	Metric Type	Definition	Target	Severity Level
1.	Average RCA Generation Time	In seconds	Time taken to generate RCA reports after incident detection is not required.	≤ 30 seconds for standard incidents	2
2.	Incident Classification Speed	In seconds	Time taken to classify and route incident after detection.	≤ 2 seconds for 95% cases	2

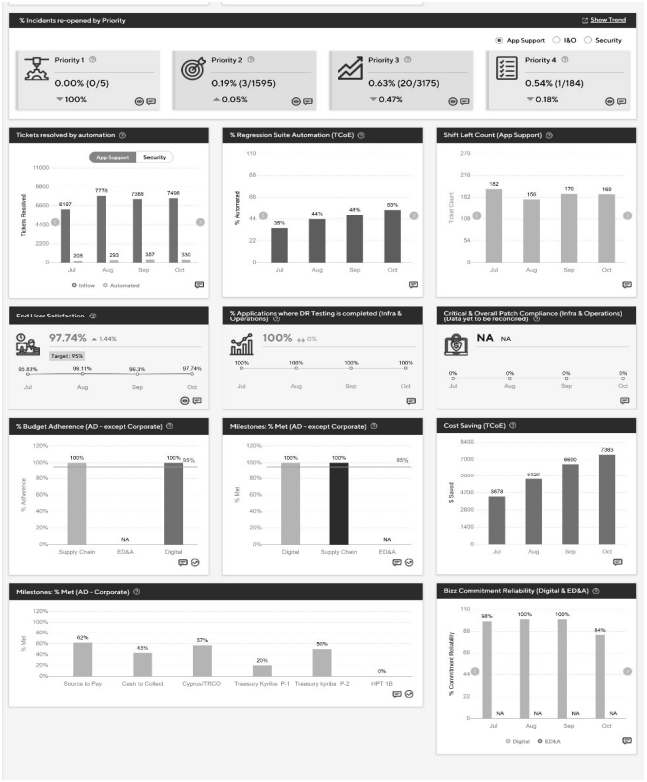

S. No	Measurement	Definition	Target	Severity Level
1.	Time to submit RCA to relevant POD – High Priority	Time taken to resolve / reassign to relevant tickets classified as High Priority (impacting critical IT services). Target: 100% resolution within (2 Hrs.) of reporting. Below 97%: 1% liquidated damages per 1% drop	100% within the defined target	0
			>=99% and <100%	5
			>=98% and <99%	6
			>=97% and <98%	6
2.	Time to submit RCA / ownership to get it Resolve by relevant POD – Medium Priority	Time taken to resolve tickets classified as Medium Priority workflow automation issues. Target: 100% resolution within (6 Hrs. Below 97%: 1% liquidated damages per 1% drop	100% within the defined target	0
			>=99% and <100%	3
			>=98% and <99%	4
			>=97% and <98%	5
3.	Time to submit RCA / ownership to get it Resolve by relevant POD – Low Priority	Time taken to resolve tickets classified as Low Priority (cosmetic or minor issues). Target: 100% resolution within (20 Hrs. Priority Level as defined in scope of work. Below 97%: 1% liquidated damages per 1% drop	100% within the defined target	0
			>=99% and <100%	2
			>=98% and <99%	3
			>=97% and <98%	4

CSAT – Survey process

We will administer, analyse and derive insights from CSAT survey for IndiGo's relevant stakeholders.

Key topics to be covered as part of Survey are Time to resolution, availability, latency, Customer Experience, Capacity etc.

- This is an iterative process and will be conducted periodically based on the frequency decided with IndiGo.
- Cognizant will share the findings with IndiGo's executives for remedial actions to be performed.
- Cognizant shall work with IndiGo to increase the satisfaction of IndiGo's employees.

© 2026 Cognizant

Assumptions & Dependencies

© 2026 Cognizant

Assumptions

1. Scope Assumptions

- The scope of services is limited to **direct digital channels** (website and mobile app – iOS & Android) as described in the RFP. Support for internal enterprise IT applications, airport systems, or back-office tools is **out of scope** unless explicitly agreed in writing.
- Technology stack covered is limited to **.NET, React (web/ micro frontend on Adobe AEM), React Native (Firebase), associated APIs, middleware, and integrated third-party systems** (payment gateways, GDS, airline systems) as listed in the RFP.
- Vendor scope covers **incident triage, RCA, problem management, stakeholder communication, and delivery coordination**. Actual code fixes, deployments, and release approvals remain the **responsibility of 's delivery teams**. Vendor will raise JIRA tickets and coordinate, not own code deployment.
- Deployment approvals (including rollback plans) will be taken by **'s Digital Leadership and/or CAB authority**. Vendor is not accountable for delays in approvals impacting resolution timelines.
- RCA approval authority rests with **Digital Leadership**. In case of disputes, Delivery team's decision is final. Vendor's SLA clock for RCA submission will stop upon submission of the RCA draft and not be impacted by internal review/approval timelines.
- Vendor will work on **'s existing ServiceNow instance**. Any licensing, configuration access, or admin rights required for the vendor team will be provisioned by within agreed timelines.
- **NPS analysis** is assumed to be an advisory/correlation exercise using data shared by . Vendor is not responsible for NPS improvement targets directly.
- Agentic AI adoption in incident management workflows is assumed to be a **phased implementation**, with scope, tooling, and integration points mutually agreed during the Transition phase.
- Performance management coverage (AEM, API, Security, etc.) will be scoped based on **access granted to monitoring tools and observability platforms** by . Vendor cannot be held responsible for blind spots in areas where access is not provided.
- Hourly smoke testing and health publishing will be performed for **mutually agreed critical user journeys only**, defined during the onboarding/transition phase.
- No UI changes are expected; any changes will require a plan and schedule revision., Testing schedules rely on all pre-test criteria being met on time—delays will impact timelines.
- 50 pages to be validates across desktop (Windows/Chrome/Edge), iOS (Safari), and Android (Chrome), Testing will follow WCAG 2.2 Level AA Guidelines, Page complexity is estimated as Simple:Medium:Complex at a 30:50:10 ratio.
- One round of testing and one round regression testing with one round defect retesting will be performed.
- Up to 300 defects will be included for retesting, Only English screens and content are in scope. Estimations are based on using open-source tools; commercial tools or device procurement must be managed by the customer.

2. Volume Assumptions

- Vendor's pricing and team sizing is based on an **estimated incident volume of [X tickets/month]** across P1–P4 categories. Actual baseline volumes will be shared by during onboarding. Significant variance (>20%) may require commercial re-evaluation.
- **P1 incident volume** is assumed not to exceed an average of [X P1s/month]. Sustained spike in P1 volumes beyond this threshold may require additional resource augmentation, subject to separate commercial discussion.
- Ticket inflow baseline for **MTTR measurement** will be established in the **first full quarter of operations** and reviewed quarterly thereafter as per the RFP. No penalties will apply during the baseline establishment period.
- Volume assumptions include incidents originating from **ServiceNow, monitoring tools, application logs, and end-user reporting** only. Any new incident sources introduced post go-live will require scope reassessment.
- The **agentic AI and automation components** are sized based on current incident patterns. If onboards new applications or channels into scope, volumes and automation effort will be re-scoped accordingly.

3. SLA Assumptions

- SLA measurement clocks will **exclude time** attributed to:
    - Awaiting SME inputs, approvals, or access provisioning
    - Third-party vendor delays (payment gateways, GDS, etc.) outside vendor's control
    - Planned maintenance windows mutually agreed in advance
    - -side deployment or CAB approval delays
- **SLA priority classification** (P1–P4) will follow 's defined priority matrix. In the event of a dispute, Digital Leadership's classification will prevail. Vendor's SLA performance will be measured against the **finally agreed priority**, not the initial classification.
- The **2-hour RCA SLA for High Priority** incidents refers to submission of the RCA draft to the team. Final RCA approval timelines are outside vendor control and will not impact SLA measurement.
- **Availability SLA of ≥99.9%** applies to the ITSM automation service layer managed by the vendor. It does not cover downtime of 's own infrastructure, third-party tools, or ServiceNow/JIRA platform outages.
- Liquidated Damages will be calculated on **quarterly invoiced fees** as described in the RFP. No LDs will apply during the **hypercare/stabilization period** (first 60–90 days post go-live), to be mutually agreed. no AI SLA till agreed
- Incident Classification Speed SLA (≤2 seconds for 95% of cases) is subject to **network latency and API response times** from 's ServiceNow environment. Vendor will not be penalized for latency originating outside the vendor's managed systems.
- . No SLA penalties will apply during the baseline establishment period

© 2026 Cognizant

Assumption

4. AEM Assumption

- Based on given 27 AEM L2 tickets/ year, we are proposing 2 FTEs from AEM to cover the skill sets (Front end and Back end). If tickets volume exceeds the capacity of these two resources, we will work with to add the required capacity for the required skills set.
- After KT, we will re-validate the ticket volume and complexity and accordingly we will revise the team construct and size.
- Desk support is recommended only for weekdays.
- Weekend on call support will be provided only for P1 category of tickets.
- For ticket needing code deployment resolution time will be dependent on Cloud Manager Schedule of .
- We have considered Adobe team covering 16x5 model on desk support and on call support only for P1

© 2026 Cognizant

Dependencies

Transition & Transformation Dependencies

- IndiGo will provide a **dedicated Transition Manager or SPOC** for the onboarding phase to facilitate knowledge transfer, access provisioning, and stakeholder introductions.
- Vendor assumes a **transition period of [8–12 weeks]** from contract signing to full go-live. Final timelines to be agreed in the Implementation Plan. SLA penalties will not apply during this period.
- Comprehensive **knowledge transfer** including runbooks, incident history, known error database, RCA repository, and architecture documentation will be provided by or its incumbent vendor within the first 2 weeks of transition.
- IndiGo 's **incumbent vendor or internal team** will support a parallel run / shadow period of [2–4 weeks] to ensure continuity and complete handover. If the incumbent is unavailable, transition timelines will be revised accordingly.
- During the transformation phase, **agentic AI and automation workflows** will be implemented iteratively. Vendor assumes 's IT and delivery teams will actively participate in design reviews, UAT, and sign-offs at each milestone.
- All transition activities are contingent on executing the **NDA and contract** in a timely manner to enable access to systems, documentation, and source code repositories.

SME Availability Dependencies

- IndiGo will make **relevant SMEs available** (Technology, Digital, Business) during the transition phase for knowledge transfer sessions, with a minimum committed availability of [X hours/week] to be agreed upfront.
- During **P1 war-room situations**, 's Digital Leadership and relevant technical SMEs will be available within **15–30 minutes of being paged** to participate in bridge calls. Delays in SME availability will be excluded from vendor SLA measurement.
- For regular operations, will designate **named POCs** per technology domain (AEM, API, Mobile, Infra, Security) who will be reachable during business hours and on-call for P1/P2 scenarios.
- Vendor's ability to perform **code-level debugging** is dependent on timely guidance from 's delivery/platform team on architecture, deployment configurations, and environment specifics. Delays will be logged and excluded from SLA timers.
- IndiGo will ensure **stakeholder participation** in monthly/quarterly governance reviews as outlined in the RFP governance model.

Access to Systems Dependencies

- IndiGo will provide **access to production source code and GitHub repositories** (as stated in the RFP) within [2 weeks] of contract execution, subject to OCP/Security/Delivery approvals. Vendor's go-live timelines are contingent on this access being granted.
- Vendor personnel will be granted **role-based, audited access** to: ServiceNow (incident management), JIRA (defect tracking), application monitoring/APM tools, log management platforms, and relevant dashboards.
- Access to **production environments** will be provided through -approved secure channels (VPN/bastion host). Vendor will comply with all 's InfoSec and access control policies.
- **Third-party system access** (payment gateways, GDS, airline systems) for RCA and debugging will be facilitated by . Vendor cannot be held responsible for RCA delays where third-party access is restricted or unavailable.
- IndiGo will ensure that **monitoring and observability tools** (APM, log aggregators, alert platforms) are configured to provide vendor with required read/triage access. Gaps in tooling coverage are 's responsibility to remediate.
- Any **new access requirements** identified post go-live will be actioned by within a mutually agreed SLA. Delays in access provisioning will be documented and excluded from SLA measurement.

Penalty & Liquidated Damages Assumptions

- **Liquidated Damages (LDs) :** will be as per MSA.
- LDs will **not apply** during:
    - The transition/stabilization period (first 60–90 days post go-live)
    - Force majeure events
    - Incidents caused by 's infrastructure, third-party outages, or access delays
    - Periods where SME non-availability directly caused resolution delays
- **MTTR baseline** will be established during the first full quarter of operations. No LD penalties related to MTTR will be levied until the baseline is formally agreed and documented by both parties.
- In the event of **SLA disputes**, the parties will follow a structured escalation: operational review → management review → formal dispute resolution as per the Agreement. LDs will be held in abeyance during the dispute resolution process.
- For Accessibility testing key customer-facing journeys of the website such as booking, payment, manage booking, and check-in flows will be identified and provided by project team or customer.

Commercials

© 2026 Cognizant

Pricing

- No subcontracting of any part of the scope to any third party will be allowed.
- Supplier is expected to propose penalties or suitable service credits in case of failure in providing services as per agreed SLA.
- Payment Term will be 60 days after receipt of the invoice. No upfront payment.
- All civil / implementation contracts will require a Performance Bank Guarantee (PBG) with a value equal to the cost of civil work/implementation which shall be valid for 3 months after work completion/go-live date.
- Commercial Response Format-Table
- Please submit your proposal exclusive of Taxes. The applicable taxes to be defined separately by Supplier.

S. No.	Header	Cost (3 years, in INR)
1	License Subscription Cost	
2	Implementation Cost	
3	Managed Support Cost	[redacted]
4	Customization Cost	
5	Agentic AI Implementation and Customization	[redacted]
	Total Cost	[redacted]

Year Wise Pricing

Year 1	Year2	Year3	Year 4	Year5	Total
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

© 2026 Cognizant

Commercial Terms and Conditions

Commercial Assumptions:

- Please note that the amounts quoted are in Indian Rupees (INR)
- Payment terms: 30 days from the Invoice due date. All invoices would need to be paid within 30 days of the receipt of the invoice by IndiGo. Payment terms would be discussed and finalized during the finalization of the contract.
- Pricing is valid for 60 days from the date of submission of response to IndiGo.
- Any travel to other locations outside the locations in scope will require prior approval from IndiGo. Travel and living expenses for such approved travel will be invoiced to IndiGo or IndiGo is expected to arrange for the same. It is not included in the price provided.
- Travel & Accommodation charges will be billed to IndiGo on actuals.
- Any change to those assumptions causing an impact to the Cognizant proposed assessment proposal thus impacting commercials, will need to be agreed via the Change Request process.
- Late payment charges, if any, will be computed at 1.5% of the overall invoice.

Taxes:

The price stated excludes taxes on invoices such as local, sales, service, value added tax and any other transaction related taxes payable on services received by IndiGo. These taxes will be billed at the time of Invoicing.

Driving Transformation with Observability & AIOps: Caselets

AI-Driven Stability for a US-Based Bank	Intelligent Automation for Business Transaction Monitoring	Insights-Driven Delivery for a UK Insurance Leader	AI-Based Observability for a US Insurance Major	Intelligent Automation for a Global Restaurant Chain
Challenge				
The client faced instability due to inefficient, customized processes, limited documentation, and a surge in high-priority tickets across 300+ applications.	The client, a leading American insurer, sought to enhance end-user experience through resilient applications and proactive business transaction monitoring.	Siloed operations and multi-vendor support led to low visibility and high delivery costs. The client aimed to establish integrated service delivery (L1.5–L3) with strong transition governance and OCM support.	The client faced high effort in error monitoring and resolution due to lack of application logging and sync issues between policy systems and downstream apps.	Delays in payroll processing due to multiple batch checkpoints, late data feeds, and high time-card rejections. The client also sought automation and alerting solutions.
Solution Highlights				
• **29% boost** in app stability • **27% FTE reduction** • **25% fewer tickets, 20% lower MTTR** • **82 automation use cases** (30 implemented) • **$1.05M savings** over 9 years	• **73%** fewer outages, **24%** fewer incidents • MTTR reduced by **45%** • Availability improved to **99.99%** • SLA adherence up from **87%** to **98%** (2,300 incidents/month) • **23.7%** productivity gain, **30.5 FTE** savings over 3 years	• **99.9% app availability** (up from 99.05%) • **50%** first-level resolution, **8 FTEs** shifted to L1 • **100+ KEDB activities,** consistent **4.0+ CSAT** • **9% YoY productivity gain,** soft dollar savings	• **20% reduction** in manual effort for issue tracing • **Improved resolution time** via AI insights • **Real-time alerts** and **on-time batch completion** • **Reduced downtime** in downstream applications	• **10% manual effort reduction** (~100 hrs/month saved) • **20% ticket reduction,** improving customer experience • **Timely payroll disbursement** and **accurate paychecks**
Impact				
• AI insights via **AppLens** & **Debt Management Framework** • **REXX-based regression scripts** for mainframe • **Scripted automation** & **Integrated Cloud Ops** • ITIL-aligned, catalog-based delivery	• AI insights via **AppLens** & **Debt Management Framework** • **REXX-based regression scripts** for mainframe • **Scripted automation** & **Integrated Cloud Ops** • ITIL-aligned, catalog-based delivery	• **Debt insights**, app hardening, job optimization • **Eliminate-Automate-Optimize** strategy • ITIL-aligned delivery with focus on low-ticket apps • **UiPath-led automation**, standardized comms, and alert dashboards	• Enabled **tool-based monitoring** and **application logging** • Set up **alerts** for job success/failure/long runs • Handled **policy mismatches**, **duplicate data**, and **critical step alerts**	• **Preventive monitoring** and alerting for business transactions • **Unified dashboard** for batch processes • **Proactive data sync** and **predictive payroll monitoring**

© 2026 Cognizant

Improved root cause prediction and rapid build through automated triage

Business Challenge

The Client, an American multinational food, snack, and beverage corporation, was looking for standardization of root cause to avoid manual assignments.

The Client was spending significant effort to triage defect and identify the root cause. There was inconsistency in root cause assignment which was done manually in ALM. This led to high defect turnaround time impacting the overall sprint timelines. Thus, the releases were impacted and delayed.

Solution Highlights

- Triage bot solution (POC) supported in defect management, thus reducing the product build time
- The AI BOT helped to find duplicate/similar defects within a release and recurring defects in the past release
- Leveraged AI to standardize the root cause categorization within application landscape

Results

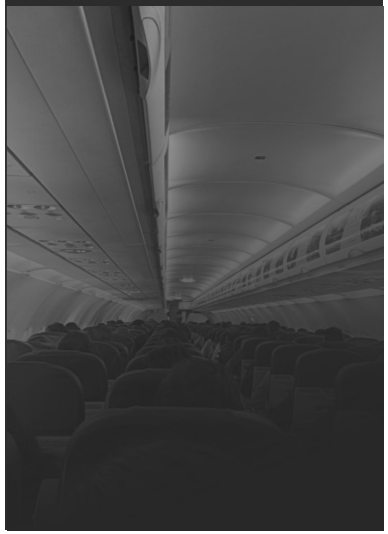

- ~20% turnaround time was improved on defect fixes by identifying the root cause of the defects and by assigning the defect to a right developer at the earliest
- MTTR reduction resulted in ~$140K cost avoidance
- 1500 person hours in triage effort was saved

Flagship carrier airline of United Kingdom

Summary

Multi tower, cross technology integrated support delivery for flagship carrier of United Kingdom

Business Challenge

- Client's Applications Support department maintains and supports 200 applications and services across a number of business and technical domain areas, augmented by multiple IT suppliers.
- Client is looking to partner with organization that will help it to reduce cost and gain business process and operational efficiencies.
- Client wants to consolidate IT suppliers for application support

Solution Highlights

- Established a multi-tower, cross-technology, dedicated maintenance & support team to deliver the objectives backed by best-in-class metrics based Knowledge Transition, Steady State service stabilization riding on strong governance, engagement with business, continuous improvements and transformational agenda.
- Established 3-tier Governance structure, spanning across Executive Steering Committee, Service Operations Committee and Service Delivery Management Committee
- Rich reporting and dashboard, providing multi-faceted view of service performance, to aid management decision
- Integrated Service Delivery across L2 and L3 teams

Scale & Complexity

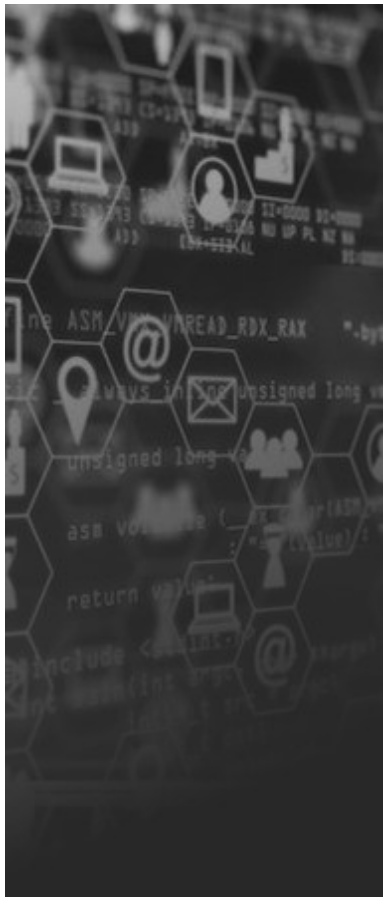

- ~100 FTEs, 200+ Applications; Geo – UK, Spain, Ireland, India
- **Scope of Services:** 24X7 support for Application Maintenance, Service Operations Processes, Operational Change Management etc
- **Technologies –** Weblogic, iLog Jrules, Trillium, Informatica, Siebel, Salesforce, Business Objects, J2EE, Mainframe, SAP, ETL, Adobe, .Net, CRM, Adobe LiveCycle, Liferay , VC++

Impact /Benefits

- Continuous Service Improvements and Innovative solutions leading to savings of around 650K USD for customer
- Reduced monthly run duration to 1.5 days from 4-5 days and displayed near real time
- Opportunity for the creation of additional projects worth £200M/year
- Improved performance and near 100% app availability
- Cost avoidance (approx. £100K) – recruitment of additional 5 IT Service Desk staff avoided
- 30% reduction in incidents
- ~35% reduction in support costs
- Significant reduction in error percentage leading to the creation of additional revenue opportunities worth approx. £88K/year
- High business satisfaction – average business review score of 9 out of 10.

Driving increase in digital revenue, customer satisfaction website revamp with a fresh user experience

The Story

Client is the global airline leader in products, services, innovation, reliability and customer experience.

This engagement primary focus was on collaborating with clients Business to replace the legacy dot com with a fresh user experience with a latest decoupled, customizable tech stack.

Few of the primary objectives client was envisioning for the digital transformation journey

- Improve customer satisfaction score (CSAT)
- Quickly customize the content based on targeted customer (Test and target)
- Replace legacy mobile web app which was just a web scraping with few of the features, so that customer reach can be extended through these additional channels.
- Decoupled architecture, so backend and frontend deployment/release can work parallelly without affecting each other and thus creating a regular update/release to improve the experience.

We Delivered

Cognizant build a foundation we divided the initial phase into 3 Primary stages

- Provide Architectural solution with emphasis to performance, Decoupled and Customizable/reusable solution.
- Deliver a complete project supporting this architecture.
  - ✓ We were engaged in clients .com's shopping lite project supporting our architecture solution.
- Use the learnings from the initial engagement and fine tune the solution to a rock-solid base for the other primary projects.

In-tune with the clients vision of fast, scalable, high performant and highly scalable solution, we delivered a SPA for a seamless end to end journey coupled with AEM for a customizable and content author able solution.

Catering to the clients customer needs of high performance SEO, we added further power to Angular by adding Angular universal which is isomorphic approach to help the app render on the server.

The complete development was automated using Jenkins and ansible.

Benefits Realized

80% CSAT score

Best score the client ever had in the history

Dynatrace Weekly Industrial Report -Top Performer In Airlines Website Performance

© 2026 Cognizant

cognizant | IndiGo

Digital transformation of a leading US airline to provide better user experience to the employees and enhance smooth operation of the airlines

Business Challenge

- Some of client's applications were unreliable, unable to handle huge loads of traffic, having downtime issues
- Client faced challenges while performing maintenance activities using the applications built on legacy platform which were inflexible and challenged client's merger with other airline carrier
- Corporate employee internal travel applications were inefficient, incompatible with organization's security & performance standards, thus resulting in poor user experience

Solution

- Refactored the code to remove technical debts and deployed traffic manager to improve the reliability, availability and performance of Inflight and Crew management applications
- Enabled the integration of another airline carrier that had different fleet of aircrafts by modernizing the legacy maintenance applications and hosted them in Azure
- Modernized the non revenue travel booking portal using cloud native microservices and achieved high scalability, availability and enhanced better user experience

Outcome

- Off-air work requests of crew-members are now processed in 5 minutes, which earlier took 1 day
- 50% improvement in the reliability of Inflight & Pilot applications that can now handle peak traffic of 3000 users compared to 1500 in the past
- 80% reduction in the response time of Inflight and crew management applications which provided a seamless experience for their employees and made them more productive
- Modernized the legacy Maintenance applications to support the merger of other airline carrier with different fleet and onboarded the supply chain process of the merging airline which resulted in savings of $400K per month to the combined entity

Technology Stack

- MVC (Razor View), HTML5, CSS3, Bootstrap, JQuery, JavaScript, Typescript, Angular, React
- C#, Classic ASP
- ASP.Net WebAPI, .Net Core API, WCF

Multinational Bakery Product Manufacturing Company

Summary

24X7 Application Support And Implementation for a Major Multinational Bakery Product Manufacturing Company

Business Challenge

- Looking for a strategic partner who could provide 24/7 application support services for its primary application (Plataforma Commercial) for managing the sales cycle & support the sales centers distributed across the geography
- Bring in industry best practices for IT service delivery and improve application reliability and performance thereby improving the business outcomes from support services while having a transparent and predictive cost and consumption model

Solution Highlights

- A managed services model was executed by Cognizant to improve services through multiple levers like CII, Transformation, Business SLAs,
- Cognizant's solution included Transformation services such as Automation, Portfolio rationalization/Tech modernization, Continuous improvement to increase application reliability and implementation of Business process focused solutions and service levels
- KEDB Enrichment & CMDB onboarding for all CI's in Client landscape.
- Introduction of L1.5 layer with Command Center Execution & ZM framework for Problem Management activities
- Automation through Service Now Orchestrator
- Multi Supplier Integration & Dev Ops Model implemented for onboarding new scope of work from development into maintenance
- Cognizant adhered to 4 Business SLAs, 6 IT SLAs

Scale & Complexity

- 38 FTEs; Apps: 7 Geos: LATAM, Canada & India, Languages: Spanish, Portuguese, English
- Scope of Services: L1.5, L2, L3 support in managed service model
- Technologies: .NET, Java, Sybase, SOA, Mobile Technology

Impact / Beniefits

- 10% savings on Y-o-Y IT Cost given to Client
- 10% incidents automated using SNOW Orchestrator
- $271K savings delivered via various CII Opportunities in 2019
- 35% reduction in BR incidents through Problem Management
- 4 New Projects won during 2019 for 1 Million MXN Peso
- 99.5 % Business SLA adherence
- 60% reduction in P2 incidents
- 50% reduction in MTTR for SOP based incidents by Left Shifting to SD team

AI based observability and application monitoring solution for an American Multi-national Pharmaceutical & Biomedical Corp

SUMMARY

Managed Services model (L1.5, L2, L3) for their App Support & Observability at global user base

- Commercial
- Data & Analytics
- Corporate
- Quality
- Supply Chain
- MLL
- Manufacturing
- Labs
- Digital Workplace

BUSINESS CHALLENGE

- Unplanned Outages resulting in delayed/lost sales orders
- Sub-optimal customer experience and employee experience
- No visibility of application status & it's components

SOLUTION HIGHLIGHTS

- Analyzed data to understand current state, automation potential, ticket reduction potential, observability of MELT (metrics, events, logs, and traces) components and more.
- Proposed Grafana enterprise cloud solutioning to build the Observability as a Service (OaaS) framework & built a Center of Excellence Observability model called "SPOGgle"
- SPOGgle - Single Pane of Glass presents data from multiple sources in a unified display - Intuitive graphical user interface to present data easier to read and interpret
- Observability platform that integrated the application metrics, errors, and traces into anear real-time dashboard, thereby improving the Reliability, Availability, and Serviceability
- Seamless Integration between ITSM Platform (ServiceNow) and AIOps platform (Moogsoft) for auto-ticketing (Actionable alerts) led to Automated incident generation
- Cognizant's EA IT and Digital Engineering teams worked in unison with the client, employing the agile Kanban framework to deliver the expected outcome

SCALE & COMPLEXITY

- 100+ FTEs, 200+ Apps; Geographies supported - APAC, EMEA, LATAM, NA
- Scope - (L1.5, L2, L3) and Minor Enhancement
- Technologies – Salesforce, Hybris, .NET, Java, Labware, LSMG, AIOPS Moogsoft, Grafana , Dynatrace etc.,

IMPACT/BENEFITS

- Eliminated unplanned outages by at least 50% to 70%
- Capture real-time and near real-time business events from multiple integrated components.
- 70+ BOTs across Business process & IT operations
- One Click" Automation framework to support deployment of entire stack in less than 5 mins.
- 40K+ of tickets eliminated/automated since AMS inception.
- Reduced MTTD & MTTR
- 20% AMS cost reduction in 2024
- 4.6/5 High Satisfaction based on survey after every project
- 85% Automation penetration in testing
- ~ $800K cost saving per year by increasing productivity

© 2026 Cognizant

AI based observability and application monitoring solution for an American Multi-national Pharmaceutical & Biomedical Corp

Challenge

According to data, Client's Customer Connect processes approximately $2 billion worth of orders per year, generating a revenue of about ~$700,000 per business hour. However, in the past year, Client's Customer Connect suffered four unplanned outages, lasting an average of 20 business hours. This means that Client's Customer Connect Portal lost or delayed 100s of thousands worth of sales due to these outages, not to mention the sub-optimal customer experience and employee experience that resulted from them. The client had no visibility into the status of the application and its components.

Recognizing the urgency of the situation, Cognizant stepped in with a comprehensive Neuro IT Operations Solution. Cognizant's distinct capabilities in Observability and AIOps delivery through the NeuroIT platform, coupled with their prior delivery experience with the client on similar engagements, positioned us as the ideal partner for this project

Our Solution

- End-to-End Observability: The team built an observability platform that integrated the application metrics, errors, and traces into a near real-time dashboard, thereby improving the Reliability, Availability, and Serviceability (RAS) of the application
- Integration between ITSM Platform (ServiceNow) and AIOps platform (Moogsoft) for auto-ticketing (Actionable alerts) led to Automated incident generation.
- Agile Approach and Team Collaboration: Cognizant's EA IT and Digital Engineering teams worked in unison with the client, employing the agile Kanban framework to deliver the expected outcome.

Results

- **Improved Availability & Reliability :** Eliminate unplanned outages by at least 50% to 70% using telemetry, observability, predictive analysis, and automation to identify and resolve issues before they impact the business.
- **Reduce MTTD & MTTR** : Increase the efficiency and productivity of the IT team by reducing the time required to troubleshoot and fix problems, and by enabling faster and more accurate RCA and remediation.
- **Enhance CX** : Improve the customer experience and satisfaction by ensuring consistent and reliable service delivery and reducing the number of incidents and complaints
