Executive Summary

IndiGo

Engagement Scope

- Provide Triage & RCA Support for Website and Mobile Applications
- 24 x 7 Support Coverage for Triage and RCA
- Managed Services for a 3-Year Engagement with the service delivery team operating in an onsite – offshore model

IndiGo Key Objectives

- Consolidate Triage & RCA Services with a single vendor
- Increase Operational Efficiency for Triage & RCA using Agentic AI
- Cost Optimization, YoY Savings
- Scalability & Flexibility

Solution Levers

- AI First Application Support
- Faster Onboarding (Mobile and Adobe)
- Integrated and Business Aligned
- Strengthen Foundation

Accelerators

- **Tensai Triage Assist Agent**
- tensai® for GenAI
- Echo Docs
- Knowledge Base (KB) System

Benefits

- Improved Production Stability and Availability
- Reduction in Incident Resolution Time and Proactive Incident Prevention
- Improved Business Continuity and Customer Experience
- 26% of cost reduction from year 1 to year 3

Timelines

- **Service Transition for additional MF, Adobe & Mobile Scope (4 weeks)**
- **Service Stabilization for additional MF, Adobe & Mobile scope (2 months)**
- **Service Operations & Continuous Improvement** (till the end of 3 Years)

IndiGo

Our Understanding of Scope

HEXAWARE

www.hexaware.com | © Hexaware Technologies. All rights reserved.

Engagement Scope

Applications	goIndiGo.in Website (B2C & B2B) IndiGo Flight Booking Mobile App (B2C & B2B)
Technology Stack	• Website: Adobe AEM, React JS • Mobile app: React Native, Firebase • APIs: .NET Core • 3rd party integrations (payment gateways, airline systems, GDS)
Support Coverage	• 24x 7
Monthly Avg. Support Workload	• Approx. 250 tickets per month for the Triage Team, of which 50 tickets will be assigned to the RCA Team to identify the root cause. • Appx. 370 alerts per month to be handled as part of application monitoring
Environment to support	• PROD environment
AI Automation	• Agentic AI solutions
Engagement Model & Duration	• Fixed-Price Managed Applications Support Services for WnM Apps • Engagement for 3 years duration

In-scope Services Activities

Triage Team Activities

- Acknowledge assigned tickets and conduct initial triage, including validation, diagnostic analysis, and documenting results.
- Create, update, and assign Jira tickets to appropriate teams, placing original requests on hold where applicable.
- Engage Product teams for clarification when required, upon receiving their acknowledgment, provide details and resolve ticket accordingly.
- Resolve incidents in line with established SOPs when no code changes are required; escalate code-related issues to Delivery teams.
- Initiate and manage Priority-1 (P1) incident bridges/calls
- Analyze NPS reports and provide actionable recommendations to improve user experience and service quality.
- Proactively act on app availability and performance monitoring alerts and system-generated incidents to prevent production impact

RCA Team Activities

- Perform root cause analysis for assigned incidents through issue reproduction, debugging, and code analysis.
- Collaborate with cross-functional teams to gather inputs and resolve dependencies.
- Prepare, review, and attach RCA documentation to Jira, and route tickets to the Delivery Release Manager.
- If RCA cannot be determined, attach the analysis performed to Jira and involve the delivery team for further investigation.
- Perform hot debugging and manage major incident handling for Priority 1 (P1) incidents.
- Performance management for IndiGo's digital channels, including website and mobile apps
- Maintain and update knowledge assets, including SOPs, FAQs, and etc.

Service Management Activities

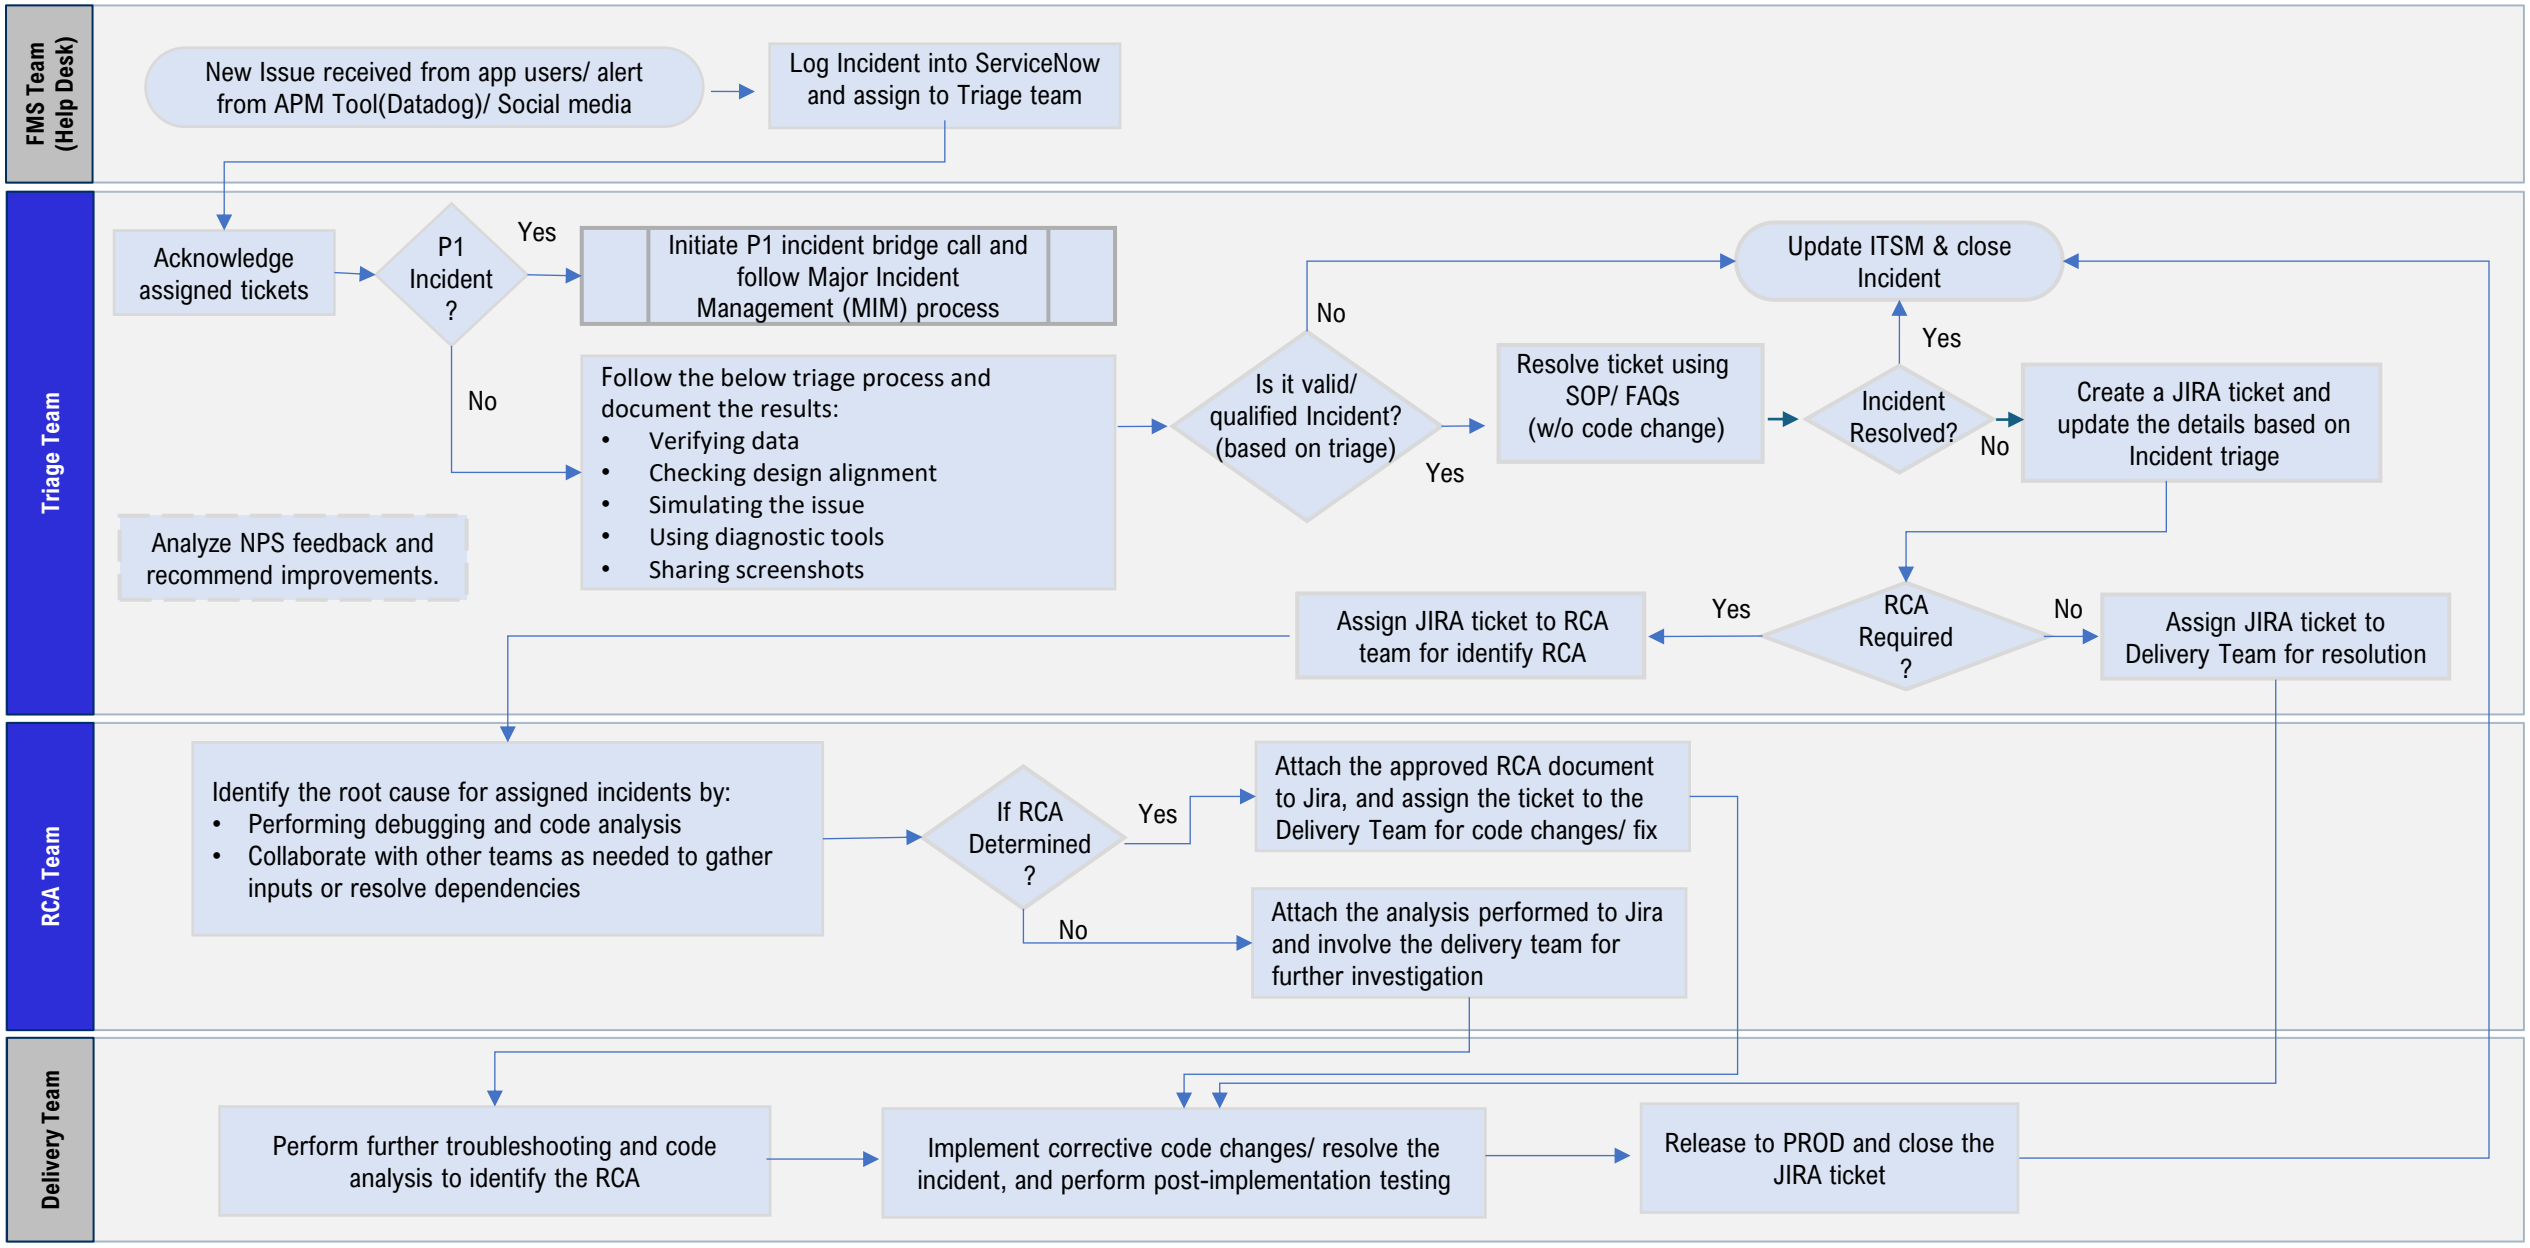

- Monitoring of tickets & their trends, enabling measures to reduce incident volume
- Participate in Daily Stand-up Meeting (DSM) with Delivery Teams to review open incidents, provide resolution inputs, get the expected resolution timelines (ETAs) from the Delivery Teams, and update the corresponding ServiceNow tickets
- Provide regular status updates to business stakeholders on ongoing issues and ETAs, based on inputs from the Delivery teams
- Delivering immediate response and investigation reports for P1 incidents
- SLA Tracking, Service Performance Reporting, Review Project Metrics/ SLAs, take corrective action
- Escalation & Coordination with 3rd party & internal teams
- Continual Service Improvements through Productivity Efficiency

Scope Exclusions

- IndiGo retained functions such as –
  - Service Desk Support / Help Desk Support
  - Level 3 support that includes Incident resolution that requires code changes and enhancements / CRs
  - Application Development
  - Infrastructure Support (for any Technology Upgrade, Server OS & Database upgrade and patching, and Database Administration)
  - Database administration
- Licenses, procurement, and management of the tools for ITSM, PM, ALM, Collaboration, Development IDEs, Code Version Control, Testing, Automation, Monitoring and Reporting
- Evolution / Transformation / Migration Project-related services.
- Test automation, performance & load testing, 3rd party system integration testing
- Support and maintenance, troubleshooting of devices such as Mosambee mPOS devices and SDKs.
- End user training and learning content creation for Mobile applications

As-Is understanding of Ticket Flow: Triage, RCA, and Resolution

IndiGo

Volumetric Analysis

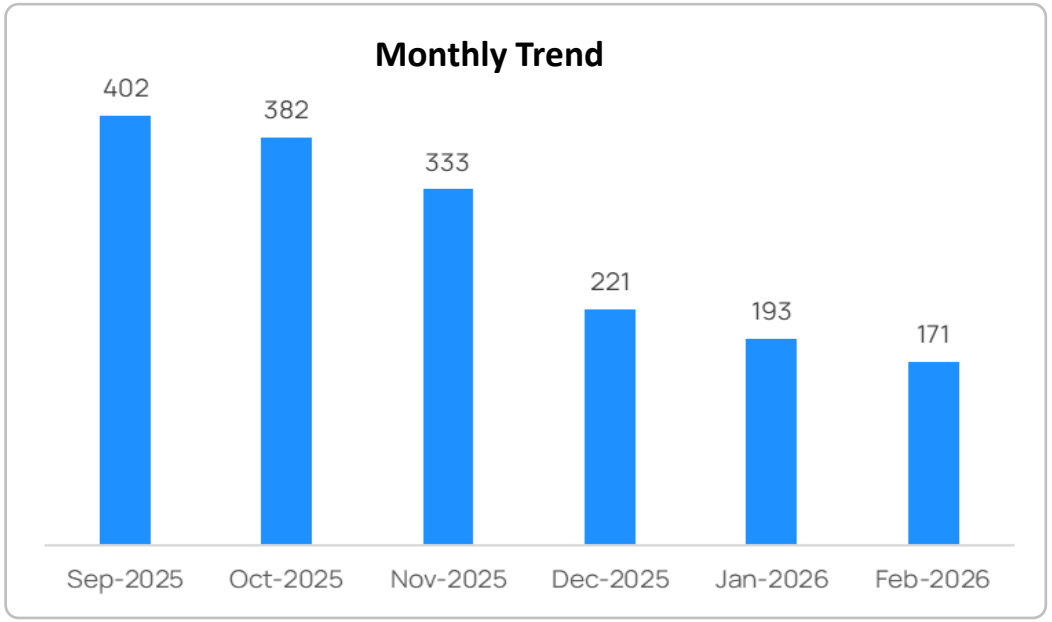

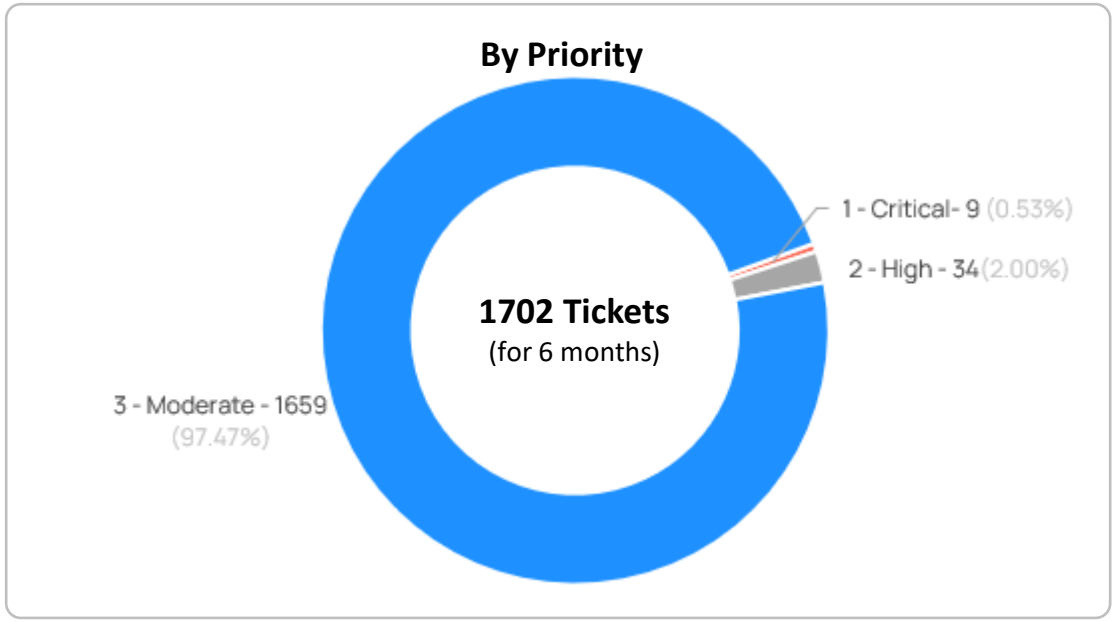

HEXAWARE

www.hexaware.com | © Hexaware Technologies. All rights reserved.

Volumetric Analysis

We have analyzed Triage and RCA teams support ticket data for the six-month period from 1st Sep 2025 to 28th Feb 2026 for both Web and Mobile apps.

- Ticket volume decreased by approximately 57.5% from 402 in Sep 2025 to 171 in Feb 2026, demonstrating enhanced application stability and effective issue mitigation.
- 97% of tickets were moderate priority (1,659 out of 1,702 total tickets), with only 0.5% critical (9 tickets) and 2% high priority (34 tickets), indicating minimal severe disruptions.
- A significant 34% reduction in tickets occurred between Nov (333 tickets) and Dec 2025 (221 tickets), likely reflecting major fixes or preventive interventions.

 | © Hexaware Technologies. All rights reserved.

Trend Analysis

Elapsed Time Distribution

Elapsed Time (Updated - Opened)	Tickets	%
1. < 1 Hour	2	0.1%
2. <2 Hours	1	0.1%
3. < 4 Hours	3	0.2%
4. < 8 Hours	2	0.1%
5. < 1 Day	4	0.2%
6. < 2 Days	2	0.1%
7. < 5 Days	765	47.4%
8. < 7 Days/ 1 Week	255	15.8%
9. < 14 Days / 2 Weeks	243	15.1%
10. < 28 Days/ 1 Month	155	9.6%
11. ≥ 1 Month	181	11.2%
	1613	

64% of tickets are addressed within one week, but with 79% of workload concentrated in the 5–14 day window, there is a clear opportunity to reduce ticket aging

Top 5 Departments by Incident Volume

Department	Tickets	%
Customer Experience	790	49.0%
Digital	404	25.0%
Sales	235	14.6%
Loyalty	80	5.0%
Airport Operations & Customer Services	35	2.2%

Customer Experience and **Digital** together account for 74% of app support tickets, and this concentration increases to 88.6% with **Sales**, highlighting where the majority of app impacts are being experienced

Time of day analysis of Tickets

IST	Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Total	%
00	3	5	4	4	3	7	6	32	2.0%

%	8.3%	17.1%	17.7%	17.7%	15.6%	15.1%	8.4%		

83% of tickets were raised on weekdays, with the remaining ~17% raised during weekends.

~81% of tickets are raised between 9 am and 10 pm (13 hrs.)

Monday, Tuesday, and Wednesday have the highest ticket counts, together representing 53% of the weekly ticket volume.

★ icon indicates the day and hour of Priority 1 (Critical) incidents in 6 months duration (10 P1 / Critical Incidents)

IndiGo

Solution Approach

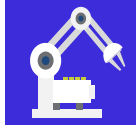

HEXAWARE

www.hexaware.com | © Hexaware Technologies. All rights reserved.

Our Solution Tenets

01

AI First Application Support

- **Tensai Agentic AI** solutions for triaging function
- **Reduce ticket handling time** for SMEs by leveraging agent-recommended next best actions, curated from intelligence derived from knowledge bases, SOPs, runbooks, and previously resolved incidents.
- Complex **event processing, correlation** by leveraging current Datadog observability tool

02

Faster Onboarding (Mobile and Adobe)

- Hexaware has 80% of apps knowledge (mainly on MS & APIs)
- **Onboarding in 4 weeks** of additional team members for the Micro Frontend scope (Mobile and Adobe) by leveraging the existing team's app knowledge
- Leverage **GenAI accelerators** for faster onboarding

03

Integrated and Business Aligned

- Dedicated triage and RCA teams across technologies seamlessly working together to provide 24x7 support coverage
- Focus on **shift left to Agentic AI solutions** with Human in the Loop (HTL) operating model
- Cross train team and train AI agents to enable support coverage
- Reduce **incident recurrence rate** in collaboration with Code fix team

04

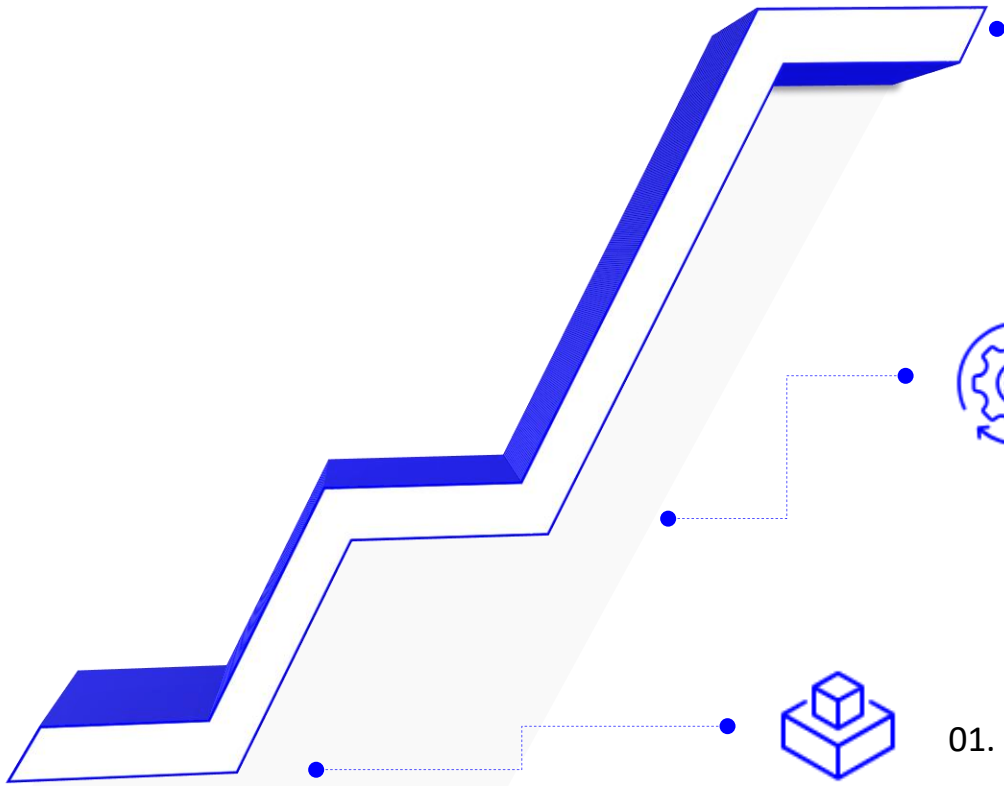

Strengthen Foundation

- Tensai **GenAI platforms** (Echo Docs and KB System) for rapid knowledge enrichment and update in SharePoint
- Strengthen current Service Now ITSM and integrated with Datadog for auto ticket creation, assignation to triage team

 | © Hexaware Technologies. All rights reserved.

AI First Application Support

Progressing to Agentic AI solutions

03. Progress to Autonomous Ops with Agentic AI Solutions

- Define the outcome & decisions that AI can own
- Design Agent architecture & develop AI system
- Implement guardrails & human oversight
- Learn, measure & expand autonomy to other activities like RCA

02. Automate Routine Tasks, Build Triage Assist Agent

- Periodically review ticket data, logs for automation scenarios.
- Implement jointly-prioritized Agentic AI use cases to reduce manual efforts.
- Shift Left activities / recurring tasks by creating Agents.

01. Strengthen Service Management

- Converts resolved incidents, chats, and RCA notes into structured knowledge bases, SOPs, FAQ and runbooks
- Create application knowledge artifacts to accelerate triage and RCA operations
- Establish end-to-end service maps for better visibility and impact analysis
- Enable event correlation to reduce noise and accelerate issue resolution

 | © Hexaware Technologies. All rights reserved.

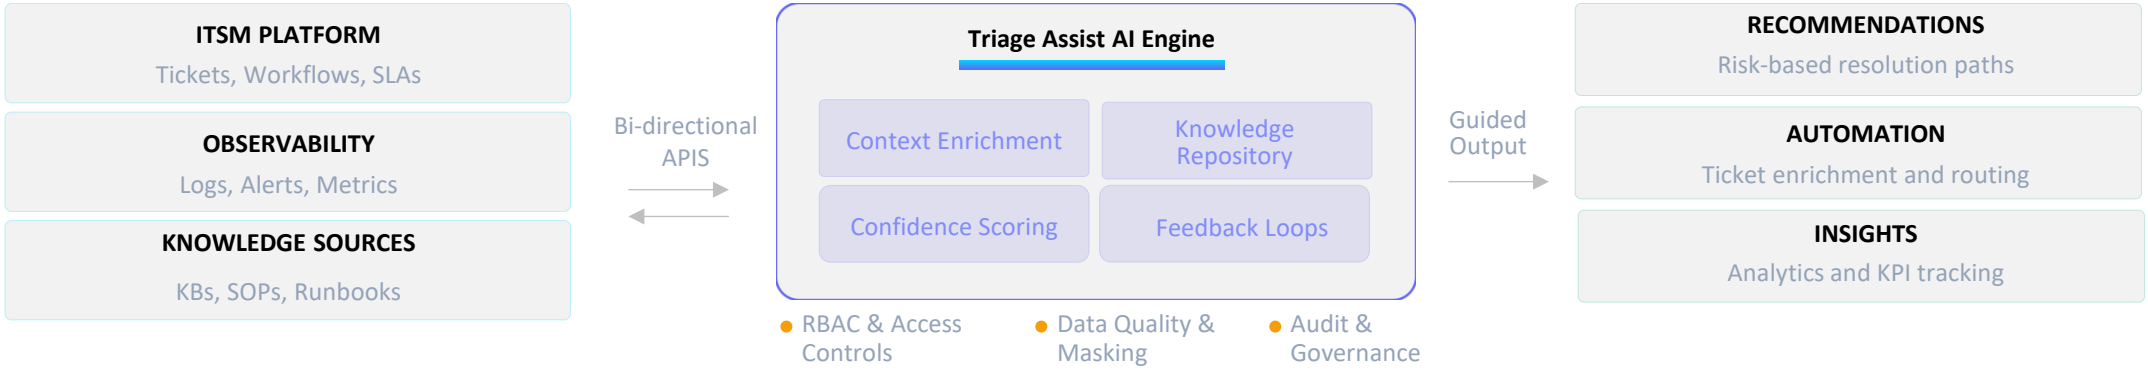

Hexaware's Tensai Triage Assist AI Agent

Tensai Triage Assist Agent is a core capability within Hexaware's agentic AI Ops ecosystem that moves organizations from manual, experience-driven troubleshooting to AI-guided, context-aware triage workflows. It delivers AI-powered intelligence to accelerate incident triage process and scale IndiGo's IT operations through:

- Hexaware will leverage the correlation and noise reduction capability of the observability platform
- Converts static KBs into executable triage playbooks
- Acts as a real-time AI copilot for support engineers
- Builds the foundation for autonomous, self-healing operations

Integration & Data Architecture

End-to-end system context connecting data sources, the AI engine, and operational workflows

 | © Hexaware Technologies. All rights reserved.

AI-assisted Faster Onboarding

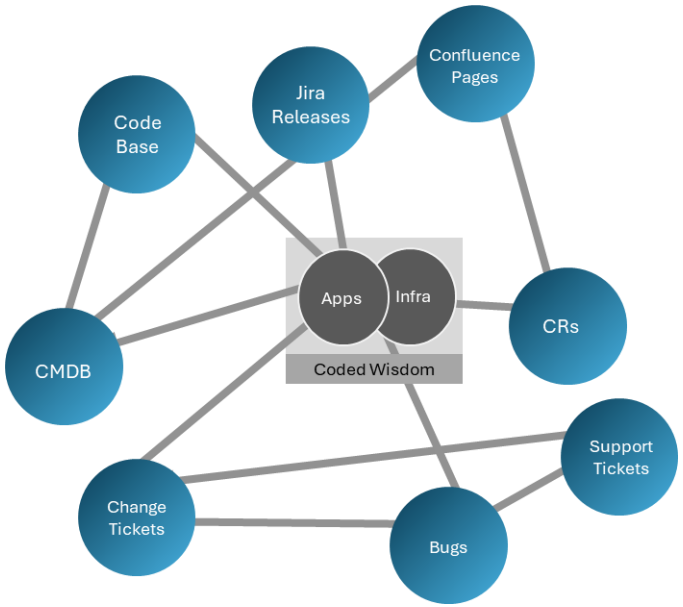

We already support 80% environment

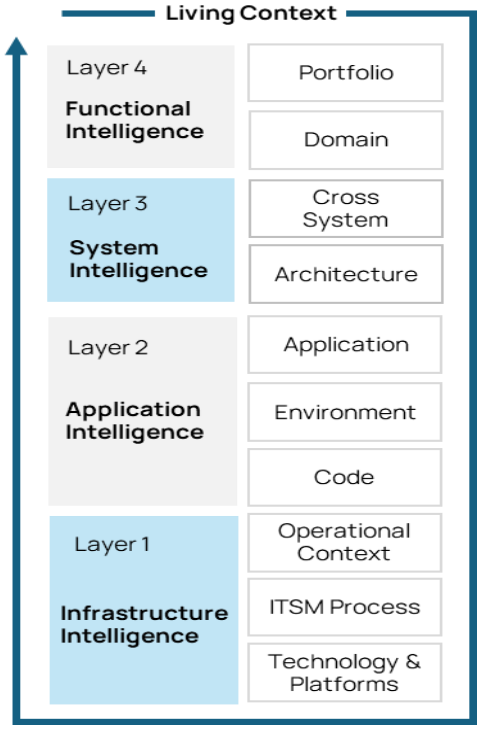

IndiGo

01 Ingest from multiple Data Sources

02 Establish a Living Context

03 Create an AI Digital SME Twin *that provides*

- New/Enriched Knowledge Articles
- People Criticality Index
- Transition Plan
- Recurring issues / tickets by track
- Knowledge Gaps
- Lower SME Dependency

 | © Hexaware Technologies. All rights reserved.

Engagement Timeline

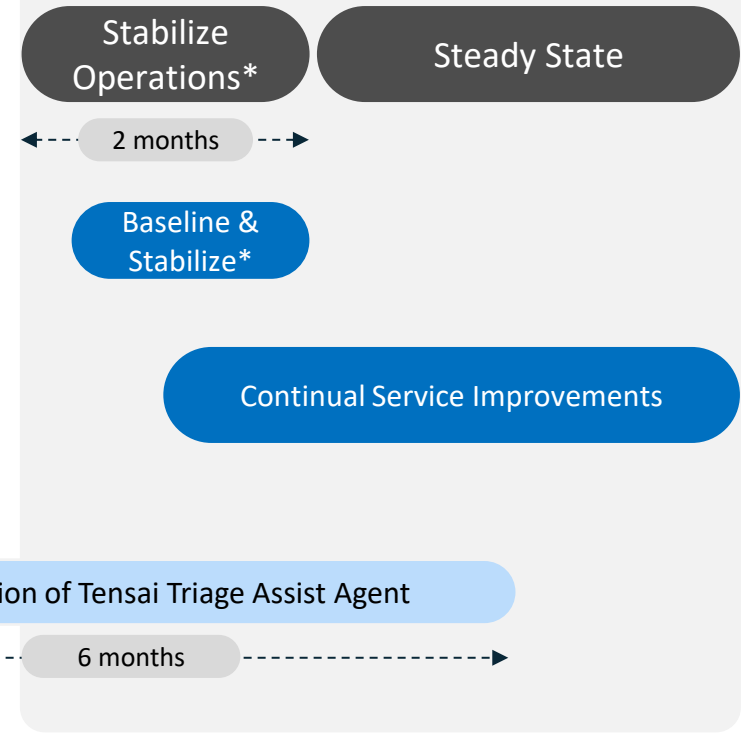

Planning Phase* (1 Week)

- Prepare detail Transition Plan
- Team Identification & Onboarding
- Validate Scope, Assumptions, Dependencies & Toolset
- IDs & Access for new team members
- Conduct Knowledge sharing sessions from Hexaware's existing Triage & RCA support team
- Finalize R&R, RACI, QG, KPIs, Risk & KM Plan
- Initiation Meeting

Knowledge Transfer* (4 Weeks)

Service Operations (till the end of 3 Years)

** Planning, Knowledge Transfer and Stabilization phases are for the expanded scope of MF, Adobe & Mobile*

 | © Hexaware Technologies. All rights reserved.

Proposed Quality Gates to de-risk transition

Quality gate is a collection of completion criteria and sufficiency checks representing satisfactory execution of a phase. They ensure transition team focuses on finishing first things first and don't go too far ahead in transition execution and thereby put the transition in jeopardy.

	(QG1)	(QG2)	(QG3)	(QG4)	(QG5)
	QUALITY GATE 1	**QUALITY GATE 2**	**QUALITY GATE 3**	**QUALITY GATE 4**	**QUALITY GATE 5**
	Signifies completion of Preparation Phase and start of Service Transition	Signifies completion of Knowledge Transfer phase	Signifies completion of Forward Shadow Phase	Signifies completion of Reverse Shadow Phase & also end of Service Transition	Signifies completion of Stabilization phase of Service Operations
Applies to	**Preparation Phase**	**Knowledge Transfer Phase**	**Forward Shadow Phase**	**Reverse Shadow Phase**	**Stabilization Phase**
Entry Criteria	Letter of Intent / Formal approval to start	Successful completion of QG1	Successful completion of QG2	Successful completion of QG3	Successful completion of QG4
Key Checks	✓ Executed SoW ✓ Finalized Transition Plan & Team for Level 1 app support ✓ IDs & Access ✓ Conduct internal knowledge sharing from existing triage & RCA app support team ✓ Finalized Templates & Tools	✓ Application-wise KADs ✓ AV recorded SME sessions ✓ Has Knowledge Repository been setup & all KB artefacts consolidated there? ✓ Has Hexaware Team done playback sessions for SMEs to assess their understanding?	✓ Observe SME & understand day-in-life ✓ Fix understanding gaps & update KAD(s) ✓ Start resolving simple app support tickets	✓ Hexaware Team independently resolve tickets using SOPs and KEDB ✓ Fix understanding gaps & update KAD(s) ✓ Transition Sign-Off ✓ Transition Lessons Learnt	✓ Baselined Service Level & KPI Targets ✓ Updated KADs
Exit Criteria	Successful completion of QG1 must-complete checks	Successful completion of QG2 must-complete checks	Successful completion of QG3 must-complete checks	Successful completion of QG4 must-complete checks	Successful completion of QG5 must-complete checks
When	**Last day of Preparation Phase**	**Last day of Knowledge Transfer Phase**	**Last day of Forward Shadow Phase**	**Last day of Reverse Shadow Phase**	**Last day of Stabilization Phase**

Incident Manager

Triage & RCA Teams for Website and Mobile (WnM) App Support Team

Triage Team Lead

RCA Team Lead

Monitoring & Triage Team

RCA Team

Enabling Team

Agentic AI / Automation Experts

Gen AI Experts

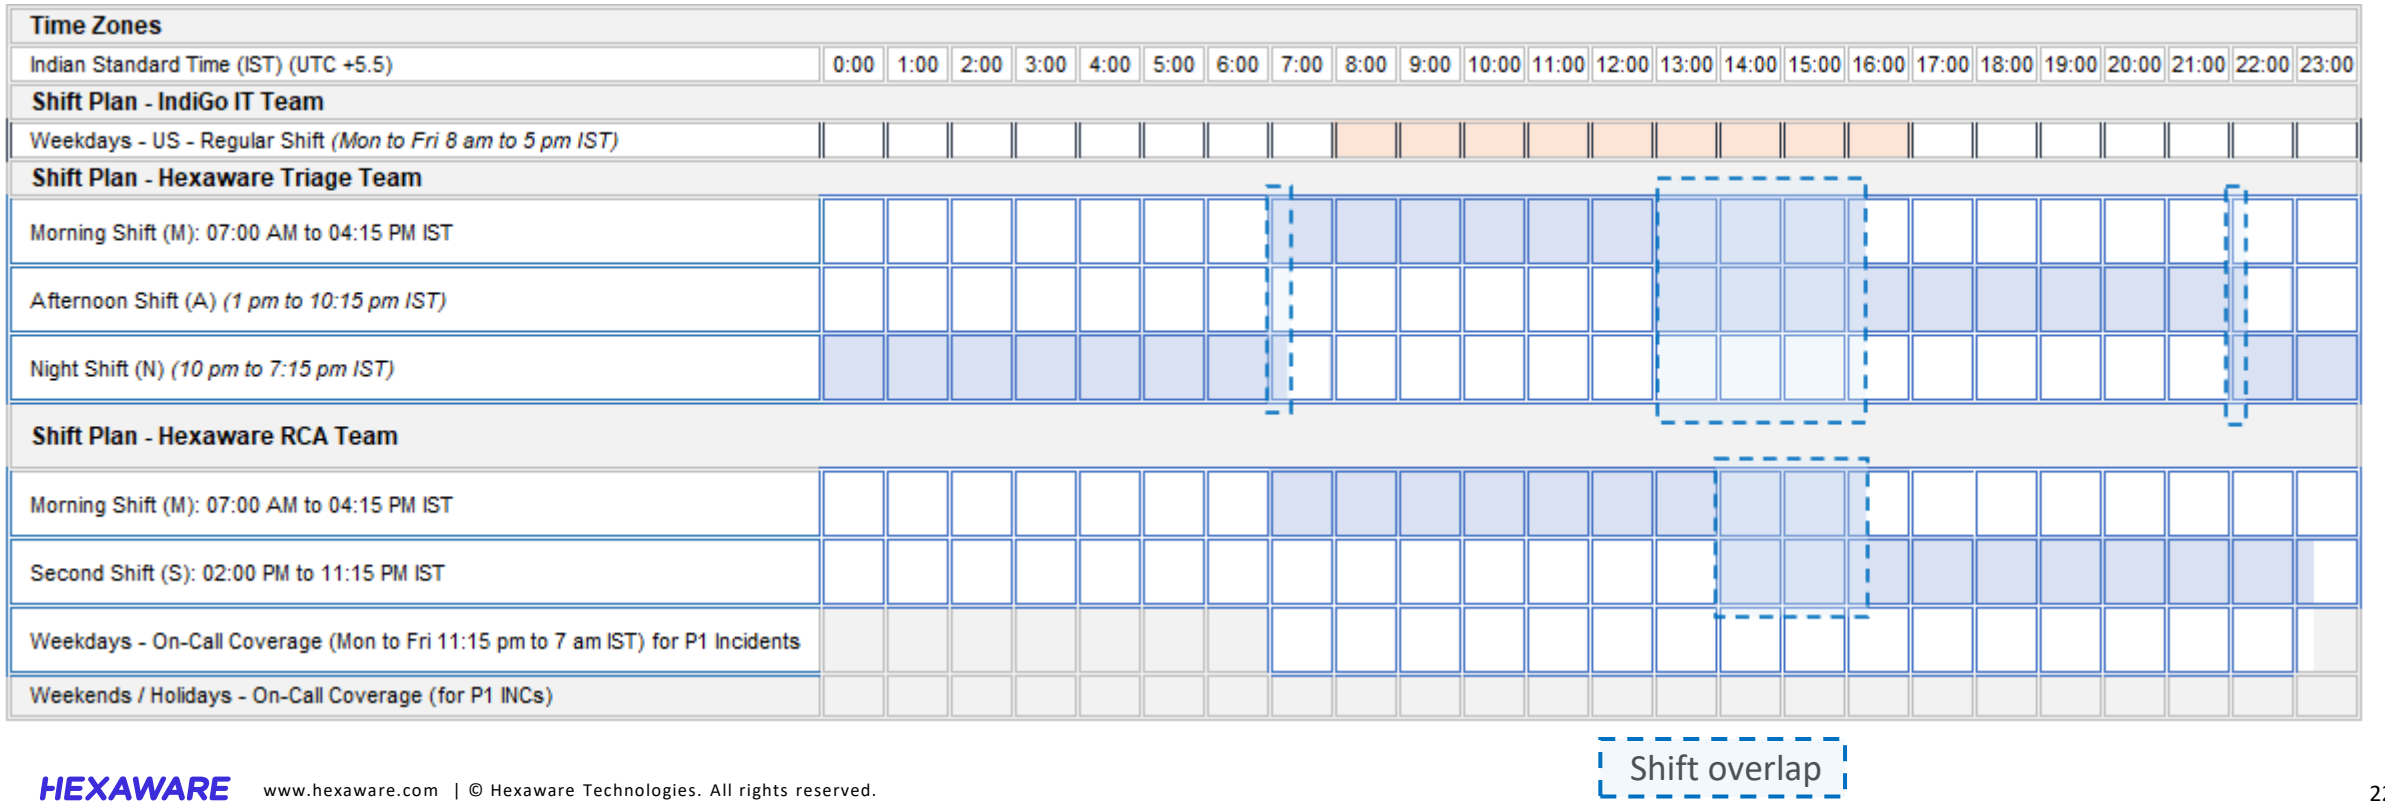

Hexaware will position ***an Incident Manager*** *in the* ***IndiGo Office*** who will liaise with IndiGo Business continuously.

 | © Hexaware Technologies. All rights reserved.

Proposed Service Coverage and Shift Plan

Hexaware will provide application support coverage as follows:

- The Monitoring and Triage Team will provide 24 × 7 support.
- RCA team will provide 16 x 5 support from 7 am to 11 pm IST, Monday to Friday + On-call support for P1 Incidents during outside shift hours, weekends, and holidays
- Team will operate onsite - offshore model. On-site at IndiGo's office. The offshore location will be Hexaware Delivery Centers in India.
- Night shift coverage will be delivered remotely (work-from-home) in line with IndiGo's security and access policies.

 | © Hexaware Technologies. All rights reserved.

IndiGo Knowledge Academy

We will enrich IndiGo's existing Knowledge management platform-related processes, tools, and documentation by leveraging our Gen AI tools and our experiences from similar managed services programs and industry best practices

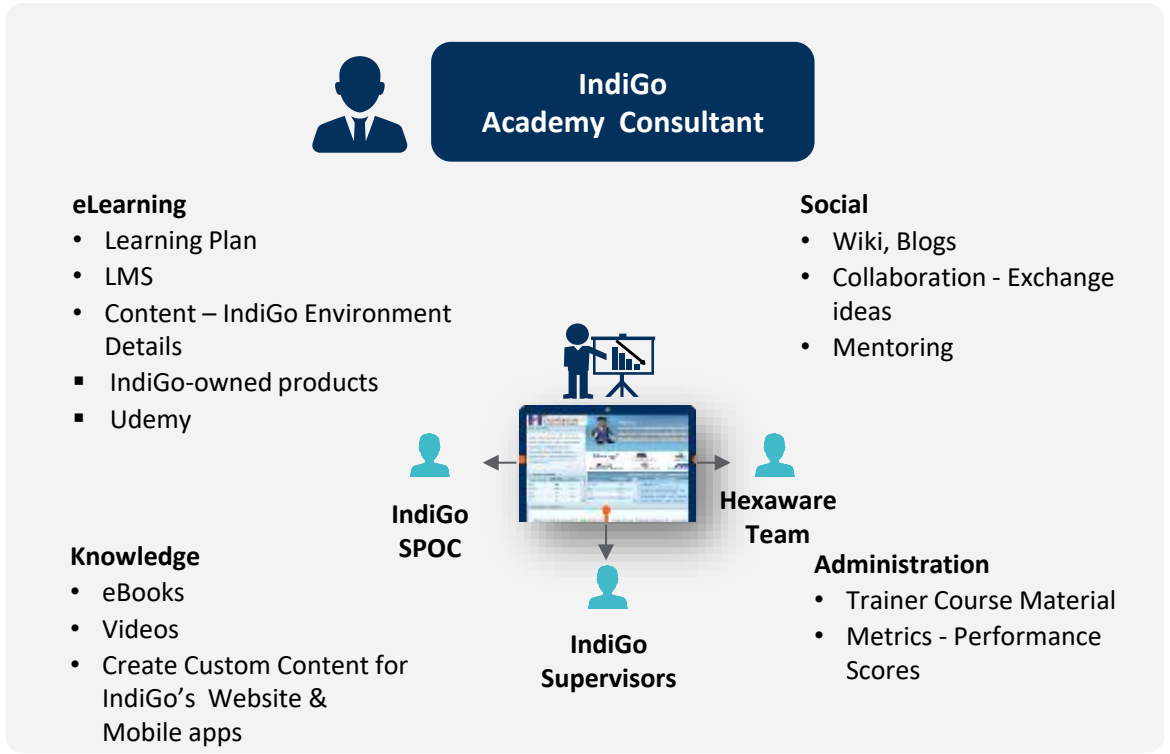

tensai / Echo Docs

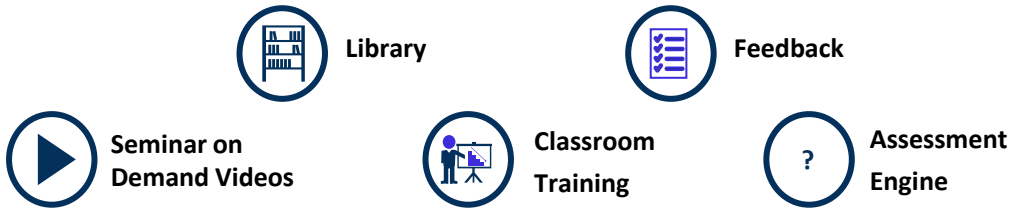

Echo Docs is a Generative AI-driven web application designed to enhance document management and data interaction within organizations.

.

tensai / KB System

Generate industry-leading knowledge base articles securely and efficiently. Empower your IT Ops team with accurate and reliable information.

Proposed SLAs and KPIs

SLAs (covering both Triage & RCA)

Priority	Response Time	Technical Triaging Time	Service levels (in %)	Measurement Frequency
Priority 1 (Critical)	Within 10 minutes	Within 4 Hours	95%	Monthly
Priority 2 (High)	Within 15 minutes	Within 8 hours	95%	
Priority 3 (Moderate)	Within 30 minutes	Within 16 hours	90%	

KPI

Area	KPI	Description	Service Level Target	Measurement Frequency
Knowledge Management	Number of KM documents created / updated	The total number of KM documents in the engagement will grow over time; however, older KM documents may gradually get outdated unless regularly updated. Monitor the number of newly created documents to determine the optimal rate of growth over time.	10	Quarterly

Assumptions

- It is assumed that up to 250 incidents per month will be assigned to the Triage Team, of which 50 incidents will be assigned to the RCA team for detailed Root Cause Analysis. The technology-wise distribution of incidents handled by the RCA team is assumed as follows:
  - .NET & MS / APIs: 25 incidents
  - Micro Frontend (MF): 15 incidents
  - Adobe AEM: 5 incidents
  - Mobile: 5 incidents
- Appx. 370 alerts per month to be handled by Hexaware team as part of application monitoring
- IndiGo IT will arrange the requisite IDs, access, documentation, hardware, tools, and software licenses for Hexaware's new team members onboarding.
- IndiGo will provide Hexaware's new team members with access to all in-scope applications, environments, and servers within two weeks of the preparation phase.
- Hexaware App Support Team will continue to use IndiGo's existing ITSM tool (i.e. ServiceNow) for ticket management and SLA monitoring
- SLAs & KPIs for this engagement will be tracked & measured in IndiGo’s ITSM/ALM tool.
- SLAs & KPIs will only be applicable to the PROD environment.
- Any changes/ modifications in the ServiceNow ITSM and JIRA fields and routing logic will be in collaboration with IndiGo ServiceNow ITSM and JIRA team
- Hexaware will provide SaaS-based agentic AI solutions for IndiGo’s WnM applications
- Hexaware will leverage IndiGo's existing Datadog observability tool for WnM apps’ availability and performance monitoring.
- Based on a rolling three-month analysis, support workload deviations beyond ±5% will trigger the ARC and RRC processes.

IndiGo

Case Studies

HEXAWARE

www.hexaware.com | © Hexaware Technologies. All rights reserved.

Case Study: Enabling very high RoI through Automation driven savings

Client: A leading global investment bank and financial services firm founded and headquartered in Zürich, Switzerland

Challenges
- Reluctance from teams; job security
- Disparate geographic processes; impacting efficiencies
- Redundant ownership of processes; influencing the direction
- Agility to adopt new, enhanced processes
- Multi-sourced environment; diffusion of responsibility

Automation Fabric
- Active Directory, Office 365, Servers & Patching, Middleware, AppOps, Cloud, Backup, Collaboration

Solution
- Service transformation and design
- Integrated automation charter
- Outcome-based automation solution; driving cross-functional efficiencies
- 3-Step approach: (i) Discovery and prioritization of high-ROI use cases, (ii) Establish agile bot-factory model, (iii) Enterprise-level awareness; governance

Outcomes
- Frequent & compliance-driven patching
- Streamlined automation and process optimization
- Increased efficiencies; surplus productivity repurposed
- Top-down integration approach for process automation

Benefits

348 bots	$13 M	$2.5M	400%+
Automating 500K transactions, saving 255K hours in an effort	Contract/work elimination, and license cost avoidance	Spend associated with enabling automation objectives	Return on Investment (ROI) achieved across 3 years

 | © Hexaware Technologies. All rights reserved.

Case Study: Streamlined automation showcasing a portfolio of 1500+ applications for disaster recovery (DR) and failover

Client: A major global investment bank and financial services firm based in US that advises clients in all aspects of finance

Challenges

- The intricacies of managing failover procedures for vital systems result in prolonged service interruptions during datacenter rotations, potentially affecting customer access to accounts and financial transactions.
- Relying on manual processes for failover / stay decisions and datacenter rotations extends the time required to complete these critical activities punctually.

Automation Fabric

- App Scaling, Database, Load Balance Failover, NAS Volume Failover, Failover, DR, Control Interface Script, Queue Failover

Solution

- Automated Failover and Rotations: We designed and optimized failover/stay procedures and datacenter rotation workflows to ensure smooth transition with minimal disruption to critical banking services.
- End-to-End automation of the entire failover/stay datacenter rotation process. This eliminates manual steps, reduces risks of errors and improves efficiency.

Outcomes

- Increased efficiency and effectiveness by utilizing robust automation
- Reduced Downtime and manual efforts
- Facilitating business continuity through resilient disaster recovery automation.
- Designed and created more than 120 SOPs for automation

Benefits

Automated Provisioning	98%	80%	75%
of 1500+ application DC rotations per annum	Success rate in 120+ Automation Use Cases	Reduction in DC Rotation Time	Reduction in Manual Efforts

 | © Hexaware Technologies. All rights reserved.

Case Study: AIOps Integration & RCA Automation

Client: A Large Financial Institution

Challenges

- Fragmented Monitoring — Splunk, Elastic and Dynatrace operating in silos with no centralized event correlation
- ~15,000+ Alerts/Day — Overwhelming alert noise with no automated deduplication or grouping
- MTTR > 2 Hours — Manual triaging across tools slowed root cause identification significantly
- No ITSM Integration — Delayed ticket creation and fragmented incident response workflows

Solution - BigPanda AIOps Platform

Unified Correlation: Splunk + Elastic + Dynatrace telemetry into one ML-powered correlation layer
Automated RCA: Cross-domain signal correlation for topology-aware root cause identification
Closed-Loop ITSM: ServiceNow auto-ticket creation & PagerDuty real-time critical alerting

Outcomes

By unifying fragmented observability tools under a single AIOps correlation layer, this institution transformed reactive, manual operations into a proactive, automated incident management capability — delivering measurable resilience improvements at enterprise scale.

Benefits

85%	60%	70%	90%	35%
Alert Noise Reduction: 15,000 → ~2,200 actionable alerts/day	Faster MTTR: 2 hours → under 45 minutes average resolution	RCA Accuracy Gain: Correlated cross-domain insights drive precise root cause	Auto Ticket Creation: Enriched context routed to ServiceNow automatically	L1/L2 Effort Saved: Operational efficiency gains across front-line support

 | © Hexaware Technologies. All rights reserved.

Case Study: Enhanced Operations enabled by Automation & Standardization

Client: A leading wholesaler and hardware store brand in America

- End to End Services spanning DC & Cloud Infrastructure Support, Network and Security Services, Application Managed Services and ITSM Implementation.
- Strengthen data quality for effective RCA , issue identification and automation.
- Committed Cost reduction while improving the quality of services, leveraging automation, AI, and ML.
- Transform the ITSM landscape with a feature-rich current Dedicated ServiceNow instance.
- Deploy Hexaware Tensai Monitoring platform as a unified observability solution replacing multiple incumbent tools.
- Defined a roadmap to enable near-term transformations, including tools consolidation, legacy platform modernization, accelerated cloud migration, and DevSecOps adoption.
- Set up a consistent operating model for ASM services by consolidating vendors across 250 custom applications, Oracle EBS, Portals & Integration platforms.

Benefits

~23%
Committed Reduction in Support Cost

16%
Tickets Avoided through effective Event Correlation and Problem Management

2000+
Estimated Man Hours Saved

 | © Hexaware Technologies. All rights reserved.

Case Study: AI-Driven Observability Transformation

Client: A Leading Global Investment Firm

Business Challenges

- High volume of alerts leading to noise and analyst fatigue
- Prolonged incident resolution timelines due to manual RCA efforts
- Limited visibility across distributed infrastructure and hybrid workloads
- No unified observability platform for logs, metrics, and traces

Solution

- Implemented a full-stack observability solution using Dynatrace
- Enabled real-time telemetry ingestion from infrastructure, applications, and cloud environments
- Designed the solution to operate seamlessly within highly isolated private network environments with complete self-sufficient observability.
- Integrated Machine Learning for anomaly detection with adaptive dynamic thresholding to reduce false positives
- Leveraged Davis AI-based Root Cause Analysis (RCA) to automate triage and improve incident resolution speed
- Introduced rule-based alert enrichment and ticket classification aligned to CI context and priority for routing to resolver teams

Benefits

43%	70%	60%
MTTR reduced through ML driven insights	Alert Noise reduction via ML clustering and correlation	Reduction in manual troubleshooting effort

 | © Hexaware Technologies. All rights reserved.

Case Study: Enabling Unified Monitoring and Predictive Insights

Client: A leading engineering and construction company serving the offshore energy industry

Business Challenges

- IT infrastructure was intricate, featuring numerous vessels, servers, and network devices distributed globally.
- Multiple teams were required to monitor alerts across various tools, making the process time-consuming and inefficient for managing operations effectively
- Lack of unified monitoring platform across infrastructure, application and critical services.
- No dedicated monitoring in place for key element tools such as backup, storage and related components.

Solution

- Deployed an Elasticsearch based monitoring solution, offering a unified view by integrating with existing monitoring platforms
- Implemented ServiceNow for auto-ticketing of all incidents with rule-based alert categorization and routing
- Additionally, machine learning-based predictive insights and forecasting were introduced, enabling the operations team to anticipate potential issues in advance
- Enabled intelligent automation solutions to validate and auto resolve routine issues, supported by tool native AI-assisted RCA capabilities
- Applied ML driven baselining and dynamic thresholding to improve signal quality and reduce alert noise across the environment

Benefits

75%	40%	45%
Improvised visibility % by bringing single pane of glass	Significant cost savings by eliminating redundant tools	MTTR reduced through ML driven insights

 | © Hexaware Technologies. All rights reserved.

Case Study: Elevating Business Performance through Advanced Application Support & Management

Client: A leading Airline in Middle East that operates 45+ fleets for both Passenger and Cargo

- Deliver Level 2 and Level 3 Application Managed Services for over 20 mission-critical applications across four core business domains: Aviation Services, Cargo, Catering, and Engineering & Ground Handling
- Involves diverse technology stack, including Java, J2EE, SharePoint, D2K, Oracle R12, MS SQL, and MySQL
- Establish a robust operating model for ASM services, providing 9x5 manned coverage from Sunday to Thursday, with dedicated on-call support for P1 INC.
