Adobe x IndiGo

Amplifying Agentic Brand Visibility for IndiGo with Adobe

A value summary for IndiGo for Adobe Brand Visibility (ABV) and Adobe Sites Optimizer (ASO)

Executive summary

IndiGo already runs the Adobe Customer Experience stack including key solutions like AEM, Analytics, and Target, across its B2C site, B2B channels, and mobile app and is already on path to modernize and elevate the customer experience.

Two shifts now decide how much value that foundation delivers. Travellers are moving from search engines to AI assistants when they research flights, fares, and destinations, and those assistants decide which airlines get seen and recommended. At the same time, once a traveller reaches goindigo.in, the speed, relevance, and reliability of the experience decides who completes a booking and who leaves.

Two Adobe solutions extend IndiGo's existing investment to meet both shifts. Adobe Brand Visibility (ABV), with AI visibility powered by Semrush, makes IndiGo visible, recommended, and chosen inside AI answers and search. Adobe Sites Optimizer (ASO) continuously improves the website so more of that demand converts into bookings. Together they let IndiGo win the moment of discovery and deliver a better experience end to end, on the platform IndiGo already operates.

> **The opportunity for IndiGo is to be recommended by AI assistants and to convert that demand on a high-performing site. ABV and ASO make both possible, building on the Adobe stack IndiGo already owns**

Adobe Brand Visibility (ABV)

Travelers increasingly begin trip planning by asking ChatGPT, Gemini, Copilot, Perplexity, or Google AI which airline to fly, where to find the best fare, or what IndiGo's baggage rules are. These models choose which brands to cite. Adobe Brand Visibility, with AI and search visibility data powered by Semrush, shows exactly how IndiGo appears and is recommended across these engines, then gives IndiGo the actions to become the airline they cite and choose.

> **Brand Discovery is moving to AI. Gartner projects a 50% decline in organic search traffic by 2028, and 80% of consumers already rely on AI-written summaries for at least 40% of their searches (Bain & Co). Being cited in those answers is now a direct growth lever.**

Business value for IndiGo	What ABV delivers
Capture demand as discovery shifts to AI	Appear and get recommended across all major AI engines, reaching travellers at the moment they choose an airline.
Win share of voice against competitors	Semrush-powered AI and search visibility data shows where IndiGo leads or trails, by route, fare type, and region, so teams act on the right gaps.
Turn visibility into bookings	Connect agentic and referral traffic to real user clicks and revenue, proving the ROI of AI-driven discovery.
Lower cost of acquisition	Grow organic and AI-sourced demand to reduce reliance on paid channels.

Customer experience unlocked: when a traveller asks an assistant about fares, baggage, or routes, they receive accurate and current IndiGo information rather than stale or competitor content, so the journey begins with trust and the right answer. In Adobe's own deployment, this approach drove a 200% lift in AI visibility versus competitors, a 41% rise in AI referral traffic, and 5x more citations within one week of making pages readable to AI.

Adobe Sites Optimizer (ASO)

An Agentic way for faster, more relevant, self-optimizing website.

Winning the discovery moment only pays off if the visit converts. Today, improving goindigo.in means stitching together audit, SEO, performance, developer, and optimization tools and coordinating across marketing, web operations, developers, and IT. That is slow and costly, and the booking funnel keeps leaking at fare selection, consent, forms, and payment. Adobe Sites Optimizer finds and fixes these issues continuously, so the site keeps improving on its own.

> **ASO powered by Adobe Agentic capability runs a continuous loop, Auto Identify, Auto Suggest, and Auto Optimize, so goindigo.in gets faster, more relevant, and more accessible without heavy manual effort or long developer cycles.**

Business value for IndiGo	What ASO delivers
Acquire more high-quality organic traffic	Technical SEO, site speed, Core Web Vitals, schema, and indexability lift ranking and load times for fare and destination pages.
Keep travellers engaged	Relevant, accessible, and readable content reduces bounce and keeps visitors moving toward a booking.
Convert more visits into bookings	Booking form and CTA optimization plus stronger security reduce abandonment at the final step of the funnel.
Do more with less effort	Prescriptive, one-click fixes free the marketing team from tool and team orchestration to focus on growth.

Customer experience unlocked: pages that load fast, read clearly, work for every traveller including those using assistive technology, and complete a booking without friction or errors. For a high-volume, direct-booking airline, these gains compound quickly into recovered bookings and higher conversion.

Why Adobe for IndiGo

IndiGo does not need another point tool or a parallel platform. It needs more value from the Adobe stack it already trusts. ABV and ASO are built to easily integrate with AEM and share data and content with Analytics and Target, so they extend the current investment rather than compete with it. Together they cover the full journey, from AI-driven discovery off-site to engagement and conversion on-site, across B2C, B2B, and the mobile app, and they raise the quality of every experience along the way.

> **One connected platform, from the AI answer that starts the trip to the booking that completes it. Better experiences for travellers, and a clear line from visibility to revenue for IndiGo.**

✓ Extends IndiGo's existing investments in AEM & Adobe, with no new platform to buy or integrate.

✓ Covers the whole journey: AI-driven discovery with ABV, then engagement and conversion with ASO.

✓ Native AEM deployment turns insights into live changes with one click, without long developer cycles.

✓ One connected view of data and content, so decisions stay consistent across teams, B2C, B2B, and the app.

✓ One vendor and one roadmap, for faster and more measurable impact on revenue and customer experience.
