Notice and Disclaimer

Restriction on disclosure and use of data

This non-binding proposal is made by **KPMG India Services LLP**, an Indian Limited Liability Partnership and a member firm of the KPMG global organization of independent firms affiliated with KPMG International Limited ("KPMG International"), a private English company limited by guarantee.

This proposal is in all respects subject to the negotiation, agreement, and signing of a specific engagement letter or contract including agreement of the scope of services and to the satisfactory completion by **KPMG India Services LLP** of applicable client and engagement acceptance procedures, including independence and conflict of interest checks and, where applicable, audit committee/board of directors' approval.

KPMG International and its related entities provide no services to clients. No member firm has any authority to obligate or bind KPMG International, any of its related entities or any other member firm vis-à-vis third parties, nor does KPMG International or any of its related entities have any such authority to obligate or bind any member firm.

© 2026 **KPMG India Services LLP**, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Engagement acceptance

This proposal shall be subject to satisfactory completion of KPMG India Services LLP's internal risk management procedures and subject to definitive services contract to be signed by parties. KPMG India Services LLP's appointment for services shall be subject to successful negotiations and agreement on contractual terms between KPMG India Services LLP and Interglobe Aviation Limited.

Engagement contract

This technical proposal is proposed by KPMG to provide the proposed services and is in all respects subject to further finalizing of scope, final submission of proposal, commercial, negotiation, agreement and signing of a specific engagement contract.

Validity

This technical proposal is valid for a period of 30 days commencing the date of the budgetary proposal.

Executive Summary

The overall objective is to **modernize and transform** the current incident management approach into an **intelligent, proactive, and highly efficient system –** ITSM Automation for IndiGo Direct Channel (Website & App) to bring in efficiency

Overall Objective

- Deliver comprehensive production support for IndiGo's Direct Channel (Website + Mobile App) covering:
- Incident management, triage, code-level debugging, and Root Cause Analysis (RCA) under priority-based SLAs.
- Enable automated incident triage & classification, Automated RCA , End to end workflow automation
- Reporting & analytics dashboards for SLA compliance, MTTR/MTTD, incident trends, RCA effectiveness, and automation success rates.

In-scope

- 24x7 production support coverage
- Incident lifecycle management
- Problem and Defect Management
- Stakeholder communication & reporting
- Proactive monitoring & incident prevention
- Agentic AI / ITSM Automation for efficiency
- Integration with tools like ServiceNow, JIRA and Datadog for Agentic AI automation
- Digital Observability & Performance Management (Direct Channel)
- Customer experience & NPS analysis
- Reduction in resolution time

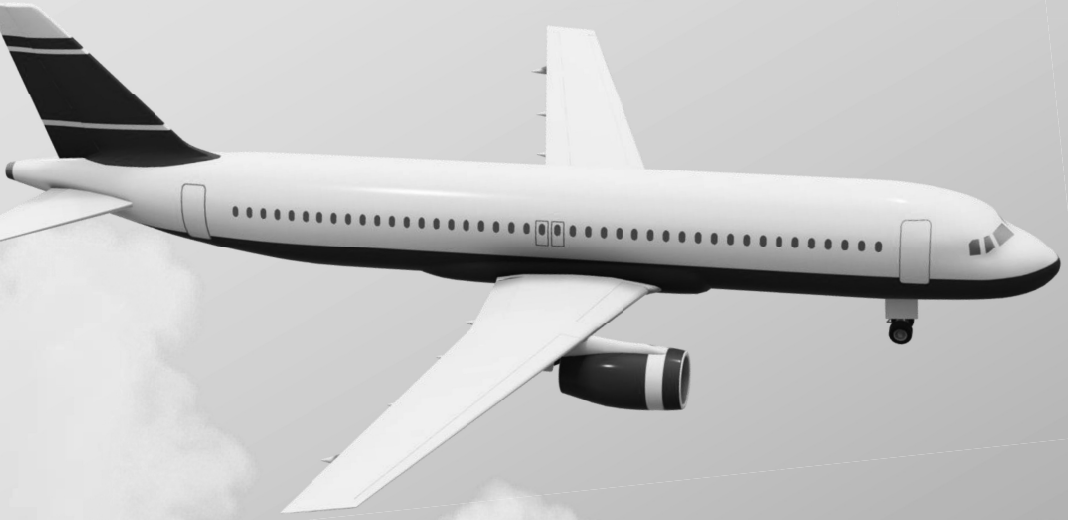

Expected Outcome

- Efficiency Gains using Agentic AI
- Improved customer experience
- Cost optimization through process improvement and automation
- Enhanced SLA Compliance
- Faster identification of RCA, cognitive smart assistant, automation, self-healing
- Enhanced transparency and governance via real-time dashboards, audit trails, explainable AI

Agenda

01

Our Understanding of Scope

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

We understand your Current Challenges & Expectations

Highly distributed IT landscape spanning D2C Applications (Web, Mobile etc.), Infrastructure, Security and Digital Platforms

High operational intensity with lack of modern AI tech stack infusion, leading to large annual incident volumes (approx. 500 per month for L2 support)

Current 18x7 support model unable to manage operational intensity, with frequent outages

Lack of consistent measurement and enforcement across SLA adherence, CSAT outcomes, system adoption, and resource productivity.

ITSM-centric service execution, expecting end-to-end visibility from ticket creation to resolution and value realization

Expectation of stability without disruption, leveraging existing as well as new tools, processes and teams while systematically improving efficiency and resilience

Multiple sources of data for monitoring and observability across diverse functions

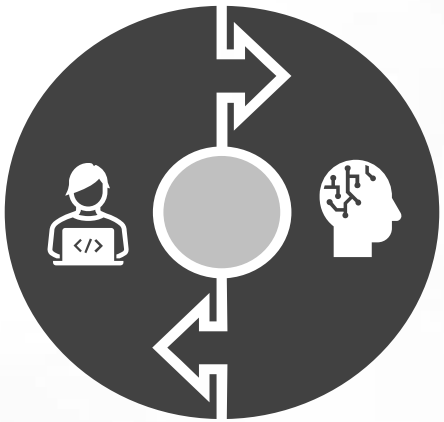

Intermittent outage frequency for D2C channels, leading to business disruption and financial impact

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Our understanding of the scope

Managed ITSM Operations

- End-to-end Incident Management & SLA adherence for L2 support, RCA and code debugging
- 24x7 Coverage
- Reporting & governance
- Proactive monitoring / prevention & problem management
- Stakeholder communication & reporting
- Customer Experience linkage, NPS analysis
- Web & mobile apps built on .NET, React, iOS, Android
- Monitoring and triage across APIs, middleware, databases, and third-party integrations
- Delivery team collaboration
- Continuous service improvement and operational excellence

Agentic AI Automation

- Implement Agentic AI solution to enhance the efficiency, drive better customer experience, NPS score and optimize the processes.
  - **Auto Diagnose incidents** , correlate alerts, trigger remediations playbooks, and close tickets autonomously
  - **Agents interpret user intent**, retrieve configuration data, provision access
  - **Automate entire flows across** IT, cloud, security, and business systems
  - **Faster Incident Resolution & Lower MTTR-** Agents reason within workflows and trigger governed actions automatically , reducing overall cycle time

Proactive Monitoring & Digital Performance Management

Metrics | Page load time | API response time | App launch time | Crash frequency | Performance post incident closures

Agenda

02

Our Approach to enhance Service Experience

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

We have created a program itinerary that ensures risk mitigated transition and future ready IT operations

1. Transition & stabilization

Support Initiation (Primary & Secondary), Stabilization, SLA Observation, SLA Enforcement

01. Plan Support, KT

- Planning & Strategy
- Auditing existing systems & Baselining
- Identify use Case for Automation

02. Stabilize Support, Observe

- Clearing backlogs, Set KPI & SLAs
- Knowledge transfer
- SLA and KPI identification and baselining

03. Enforce SLA

- Discovery
- Detailed KT Sessions & Documentation of Processes
- Planning
- Shadow
- Platform assessment
- Walkthrough of different systems
- Providing Documentation & Access
- Final Handover to initiate the work

2. Execution & Optimization

Execution, AI & Maker-Checker

01. Operations & improvement

- In-Scope Operational Services (Run / BAU)
- 24x7 production support coverage
- Problem management & RCA
- Customer Experience Linkage
- Triage & RCA
- RCA Governance
- End-to-end workflow monitoring
- Incident lifecycle management

02. Agentic AI Solution

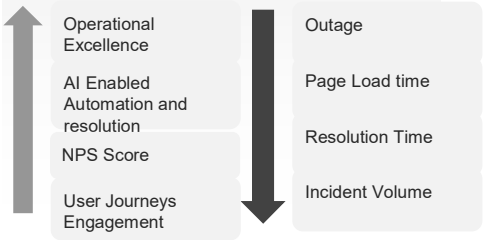

- Build and configure the Agentic AI layer
- Integrate observability and monitoring signals
- Configure ITSM automation workflows
- Set up human-in-the-loop controls and governance
- MVP
- Agentic AI Implementation
- Deployment, Hypercare
- Maker-checker enabled ITSM, Transition to Autonomous ITSM

3. Continuous improvement

Performance Optimization
Enterprise AI Enablement

01. Evolve – Drive KPIs

- Stakeholder Trust & Transparency
- Knowledge base Management
- Executive Dashboard
- Automation & Integrations with different systems
- Quarterly Executive Meets
- KPMG Performance Audits and Suggestions
- Industry Best Practices & Solutions
- AI Driving Insights & Reporting

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Transition phase will focus on seamless transition from incumbent team to KPMG team

1. Transition & stabilization

Support Initiation (Primary & Secondary), Stabilization, SLA Observation, SLA Enforcement

01. Plan Support, KT | **02. Stabilize Support, Observe** | **03. Enforce SLA**

- Planning & Strategy
- Auditing existing systems & Baselining
- Identify use Case for Automation
- Clearing backlogs, Set KPI & SLAs
- Knowledge transfer
- SLA and KPI identification and baselining

Discovery	Platform assessment
Detailed KT Sessions & Documentation of Processes	Walkthrough of different systems
Planning	Providing Documentation & Access
Shadow	Final Handover to initiate the work

2. Execution & Optimization

Execution, AI & Maker-Checker

01. Operations & improvement

- In-Scope Operational Services (Run / BAU)
- 24x7 production support coverage
- Problem management & RCA
- Customer Experience Linkage

Triage & RCA
RCA Governance
End-to-end workflow monitoring
Incident lifecycle management

02. Agentic AI Solution

- Build and configure the Agentic AI layer
- Integrate observability and monitoring signals
- Configure ITSM automation workflows
- Set up human-in-the-loop controls and governance

MVP
Agentic AI Implementation
Deployment, Hypercare
Maker-checker enabled ITSM, Transition to Autonomous ITSM

3. Continuous improvement

Performance Optimization
Enterprise AI Enablement

01. Evolve – Drive KPIs

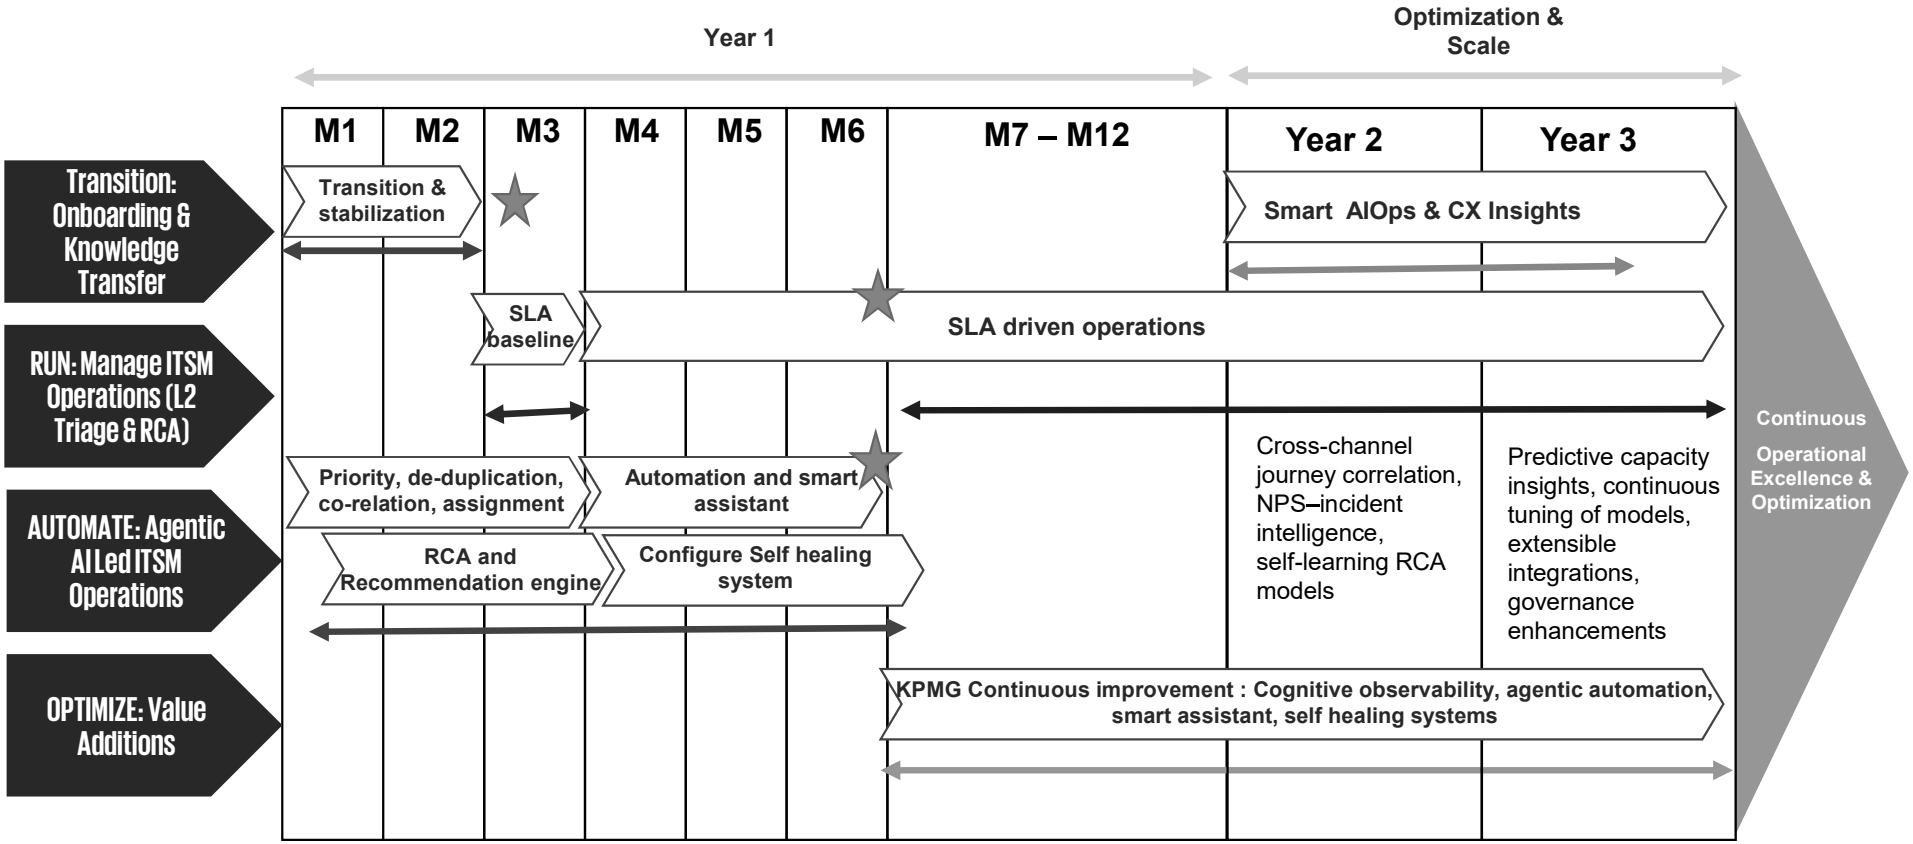

- Stakeholder Trust & Transparency
- Knowledge base Management
- Executive Dashboard
- Automation & Integrations with different systems
- Quarterly Executive Meets
- KPMG Performance Audits and Suggestions
- Industry Best Practices & Solutions
- AI Driving Insights & Reporting

Operational Excellence	Outage
AI Enabled Automation and resolution	Page Load time
NPS Score	Resolution Time
User Journeys Engagement	Incident Volume

Transition – Key activities

DISCOVERY & PLATFORM ASSESSMENT

Key Areas Reviewed
- Micro front-end architecture
- Micro services architecture
- CDN configuration
- Integration with Adobe services
- Service now fields, templates, notifications

Environments
- Dev
- QA
- UAT
- Pre-prod
- Production

Infrastructure
- Hosting provider (Azure, OCP)
- Cloud architecture (Azure)
- API Gateway (3Scale)
- Monitoring & Logging (DataDog, Kibana)
- Backup and DR setup

KNOWLEDGE TRANSFER

Functional Overview
- Functional walkthrough, booking flow, modification etc.
- Known errors
- Workarounds

Platform Architecture
- OCP topology
- CDN setup
- API & cloud gateway.

Codebase
- Git repositories
- Core components customization

Content Management
- Code documentation
- Functional/business documentation
- Content models
- Templates
- AI document creation and validation

DevOps
- CI/CD pipeline
- Build process
- Deployment procedures
- Rollback procedures

Security
- Authentication
- User groups
- Permissions

ITSM processes
- Incident problem and change mgmt.
- Known error database
- KPI and SLA
- Program governance and reporting
- Stakeholders mapping

ACCESS & OWNERSHIP

Area Access
- Service Now
- JIRA
- Git repository Code access
- AEM environments Dev / QA / UAT/Pre-Prod/Prod
- Cloud Manager Pipeline access
- Adobe Admin Console: User management
- CDN: Akamai
- Monitoring tools: Datadog, Kibana

Security checklist:

Revoke old team admin accounts
- Rotate credentials
- Audit privileged access

KPMG

KPMG Transition framework – North star for transition

Transition phases	Planning	Knowledge transfer	Shadow support	Primary support
PMO	• Develop Communication plan with IndiGo • Sign off Communication templates • IndiGo and vendor's Key stakeholder identification • Develop risk and issue register having inputs from IndiGo and third-party vendors	• Collect publish and KT progress report to IndiGo stakeholder, • Update issue and risk register • Facilitate program governance calls with IndiGo • Track entry and exit criteria • Get IndiGo track owner sign off for entry & exit criteria	• Collect shadow progress report and report to key stakeholders • Update issue and risk register • Facilitate program governance calls with all stakeholder • Track entry and exit criteria	• Collect primary progress report and report to key stakeholders • Update issue and risk register • Facilitate program governance calls with all stakeholder • Track entry and exit criteria • Conduct user survey on team performance
Service transition	• Creation of transition plan and timelines • Contextualized entry and exit criteria • Identification of IndiGo and KPMG transition manager and KT SPOC for triaging, web, app, monitoring and COTS applications like Datadog	• Schedule KT sessions with IndiGo L2 support team • Appl functionality and business process walkthrough • Code &Code mgmt process walkthrough • Key Incident walkthrough and overview of open incidents • Non ticketed/hose keeping activity walkthrough • Ticket prioritization framework walkthrough • Conduct reverse KT session	• Ensure Handling of incidents independently • Facilitate collaboration with incumbent team on critical incident resolution	• Ensure Handling of P1/P2 incidents are done by KPMG team with minimal support • Identify knowledge gap in managing P1/P2 incident • Incumbent team focus on closing open incidents
HR & access mgmt.	• KPMG transition and support team onboarding • KPMG team Login ID and access creation	• Verify KPMG team access control • Ensure KPMG team onboarding on Service Now • Address any HR/personnel issues	• Monitor SLA achieved by KPMG team • Address any HR issue related to shift timing	• Monitor KPMG team overall SLA achievement • Ensure privileged access configured for KPMG team • Revoke incumbent team access
Talent enablement	• General business/domain training • Overview of scope of work • Conduct domain specific training	• Conduct domain specific training • Conduct client specific process training • Talent assessment and evaluation	• Identify and gaps in KPMG support team while performing shadow support • Arrange for additional training/KT sessions • Facilitate peer learning	• Gap identification and remediation approach for P1/P2 incident
Knowledge mgmt - Document & artifacts	• Sign off on KT document template • Approach finalization for KT and reverse KT • Approach for code walkthrough • Identify document repository & configurations	• Identify and document gaps in existing documents • Leverage AI tools to extract knowledge from the source code • Update Key contacts with KPMG support team details	• Document incident, change request and change mgmt process • Update SOP and Knowledge articles • Document additional information obtained during shadow support	• Update knowledge document with additional gaps identified • Identify improvement areas • Create reverse transition document and signoff
Logistics	• IndiGo to plan for KT and other logistics in Gurugram	• IndiGo to arrange KT facilities and mode of KT (conference call, classroom training etc.)	• Identify "two in a box" approach having one KPMG and one IndiGo team • Rotation of KPMG team to drive cross skilling	• Ensure continuous BAU
Contracts	• Discuss hiring/rebadging cases if needed and get internal approvals • Existing OLA reviews	• Process for engaging vendor support team • OLA with third party vendor • Source code and business logic walkthrough	• Review and Validation of source code and processes	• Contract setup with IndiGo • Fulfil any contractual obligation from vendors
Tools	• Identification of document mgmt solution for KT documents • Gen-Ai/AI tools selection and platform build	• Implementation of document mgmt. solution for KT documents • Deploy Gen-Ai solution for code knowledge extraction	• Review documentation generated by Gen-AI • Validation by incumbent team • Version controls	• Address any process or capability gaps • Implement new changes using new tool chain • Leverage Gen-AI solution for code quality and vulnerability checks

KPMG

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Transition – Entry, exit criteria and key deliverables

Transition phase	Entry Criteria	Exit Criteria	Deliverables
Planning	• SoW signed- off • Communication to business and key stakeholders • Key teams identified from IndiGo and KPMG	• Transition plan agreed and signed off • Transition templates and report format signed-off • Meeting scheduled and Calander blocked for Incumbent team • Calendar blocked for business and other key stakeholder	• Risk and issue register • Finalization of communication template and key stakeholders • Agenda for Steerco, and project meetings • Detailed project plan and RACI KT plan including duration and KT provider – IndiGo & KPMG • Resource training plan • Saffire configuration document to onboard KPMG team
Knowledge transfer	• Approach for KT identified • Existing source code and documentation location identified • Access enabled to IndiGo source code repository and tools	• Code walkthrough and access to code base completed • KT documentation completed as per KPMG Application Appreciation document (AAD) template • Reverse KT completed and sign off from Incumbent team • Open incidents, problem and change request details are shared with KPMG team • Resecures qualifying evaluation test and interview by incumbent team	• Documentation of source code, business logic and application functionality • SOP, non ticketed activities, known error and workaround • Open/WIP incidents • Resource evaluation test papers • Reverse KT sessions
Shadow support	• Access verification of all KPMG resources to relevant application	• KPMG team able to complete manual task, health checks incidents • KPMG team can solve SOP driven incidents • KPMG team able to perform root cause analysis • KPMG team can perform complex incident with the help of Incumbent team.	• KPMG team progress report card • Details of incidents managed by KPMG independently • Updated SOP document • Additional training needs document
Primary support	• System access of incumbent team modified as read only	• Clearance of backlog incidents by incumbent team • KPMG able to resolve all type of incidents with minimal support from incumbent team	• KPMG team progress report card • Details of incidents managed by KPMG independently • Updated SOP document • Effort estimates and team sizing

KPMG would implement IndiGo scoped relevant deliverables and entry/exit criteria

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Key transition risks and mitigation approach

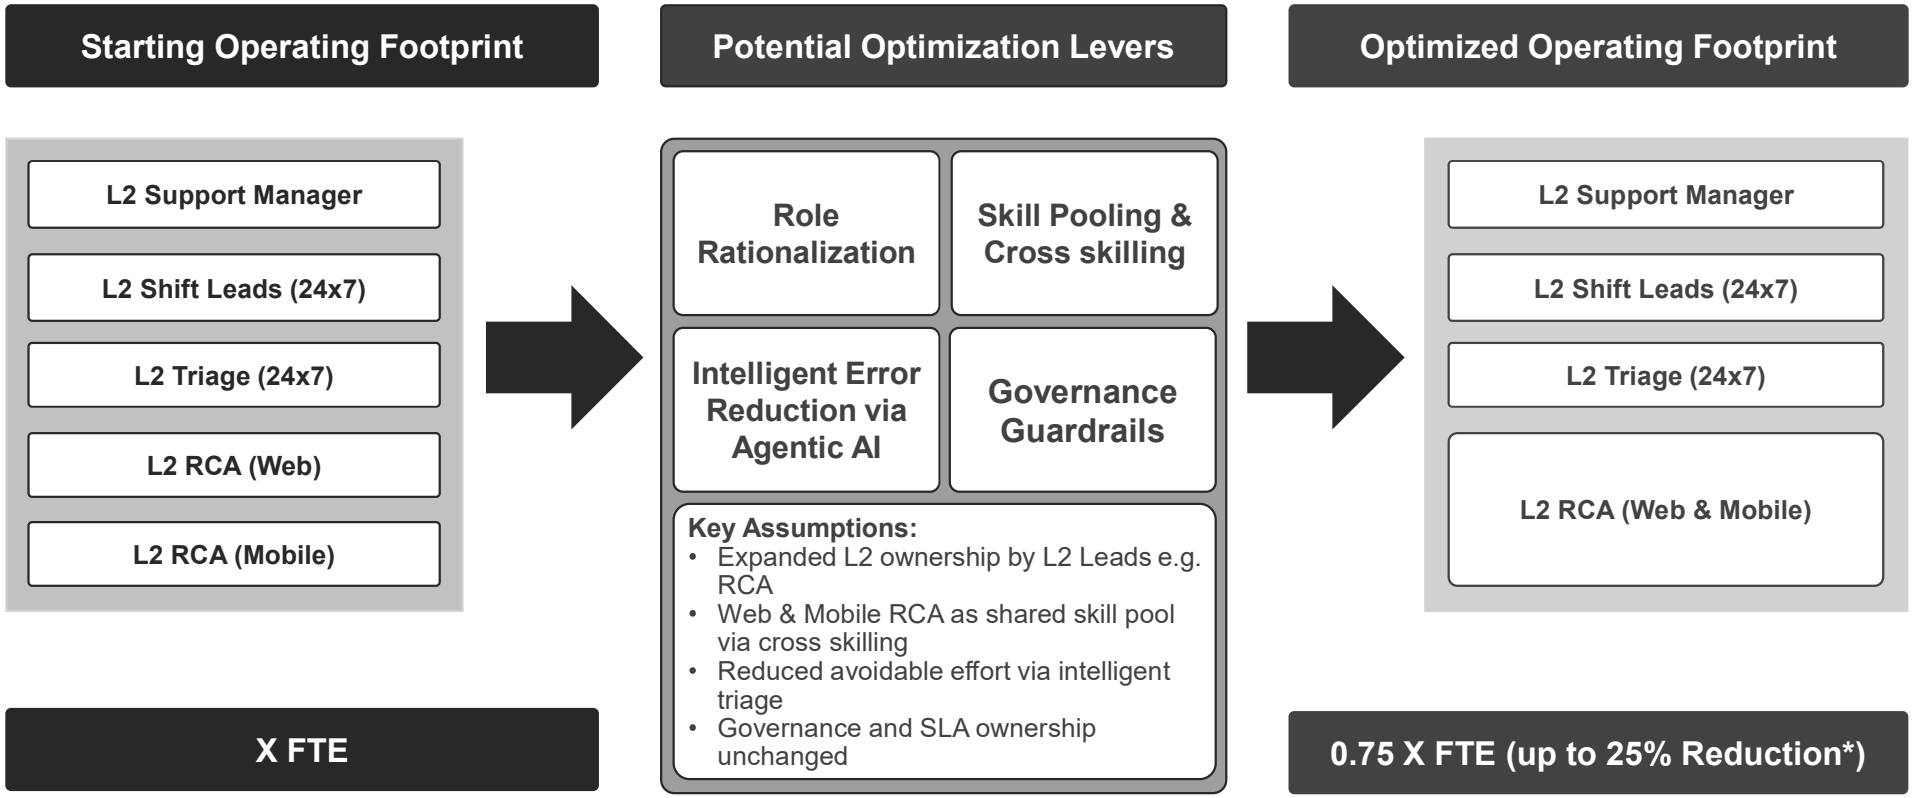

Risk category	Probability	Risk description	Mitigation *	Key dependencies
Unavailability of code documents, knowledge base	High	• Lack of documentation about software code design, code intent and business logic	• KPMG would deploy open-source source model (ex. LLaMA 2 and CodeLlama) for code analysis and extracting business logic)*	• IndiGo to provide subscription of OpenAI or similar SaaS based solution/or provide infrastructure to host KPMG Kortex platform for running opensource algorithm
Incoming team ability to ingest knowledge	Medium	• IndiGo existing team is having in-depth experience and highly cross skilled, such quality may not be in incoming team	• KPMG would allocate capable resources as part of the transition and during first year of support. • KPMG will also look at re-badging existing resources for knowledge retention.	• Existing Team and IndiGo Team
Timelines	Medium	• Transition extending beyond three months	• KPMG has created separate sub-bucket under each bucket and execute parallel transition, ensuring that transition completion is staggered	• IndiGo resource commitment and alignment to KPMG transition plan
Application Outage	Medium	• Due to lack of knowledge KPMG team may not able to resolve incidents on timely manner	• KPMG detailed transition plan with shadow, reverse shadow and primary support will well defined gating criteria will ensure minimal impact to users during transition	• Agreement on entry and exit criteria of each phase

IndiGo will provide the infrastructure to host Gen-AI solution and approval for usage of open-source Gen –AI models. Alternate Licensed Solutions can also be considered.

Our support workflow for dealing with Incidents and Changes

At Level 2 support, KPMG will determine if an incident is a defect or a change request, or an issue related to the platform itself.

The exact procedures for moving an incident or problem into the change request stream will also be detailed and documented in the onboarding phase, ensuring a clear delineation of responsibilities, dependencies and risk is associated with their respective workstream.

- **Handle incidents escalated from L1** that require deeper technical analysis, application-level troubleshooting, or domain expertise.
- **Perform root cause analysis (RCA)**, applies workarounds or fixes where possible, and coordinates with L3 or vendors for complex issues.
- **Own incident resolution within SLA**, including prioritization, stakeholder communication, and documentation in ITSM tools.

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

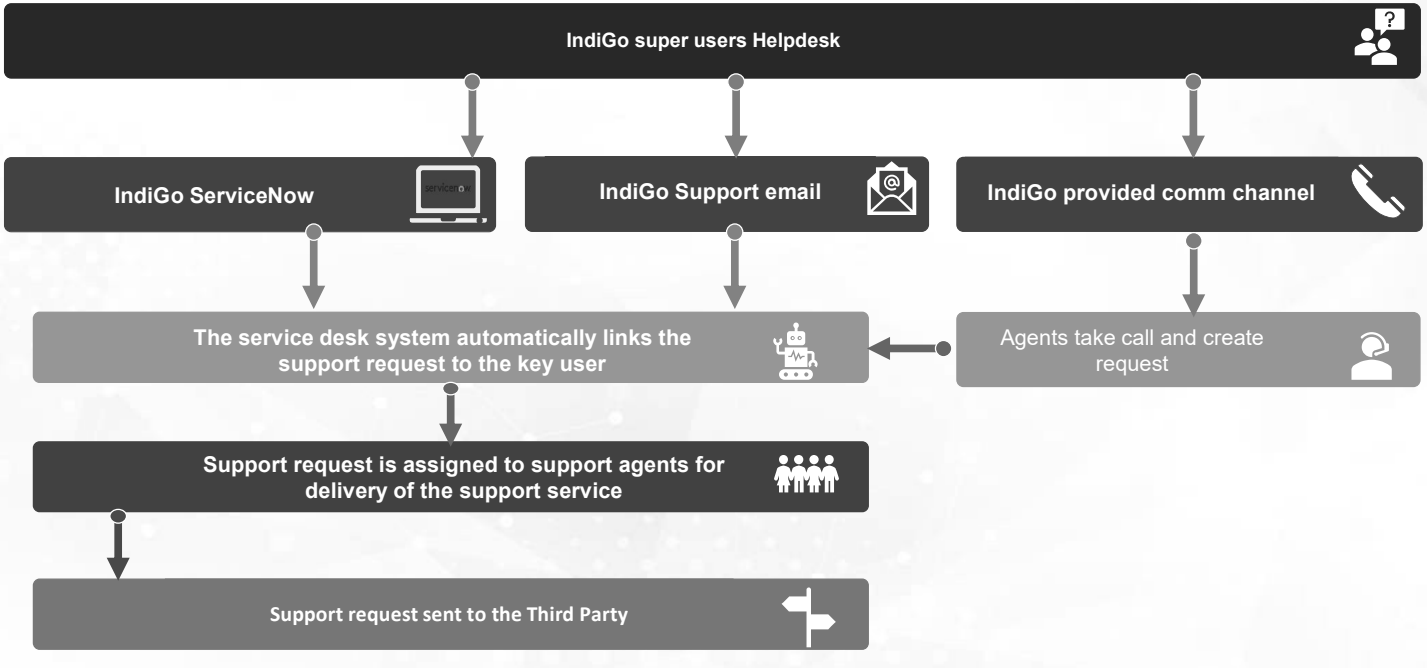

Our communication flow for Incidents Management

A simplified communication flow for incidents is illustrated below. This flow is as per the existing IndiGo ITSM process and will be operationalized from onboarding phase itself to ensure it is in line with client policies and procedures, adjusting and modifying where required. This would form part of the operations manual between the client and KPMG.

Any additional triage or expected interactions would be documented in this operations manual throughout the life of the service.

Assumptions and dependencies:

- IndiGo to provide trained super users to their general staff as a first port of call for all incidents related to the solution
- Make available a trained Level 2 service desk provision to be able to diagnose and triage incidents related to the solution appropriately
- Ensure that licensing, platforms and the necessary tooling required to operate and run the service are made available to KPMG throughout the engagement period
- Provide KPMG with an environment and necessary levels of access to resources in order to allow the service to be provided.

Operations Manual

Our defined service operation agreed during onboarding

Application Information Document

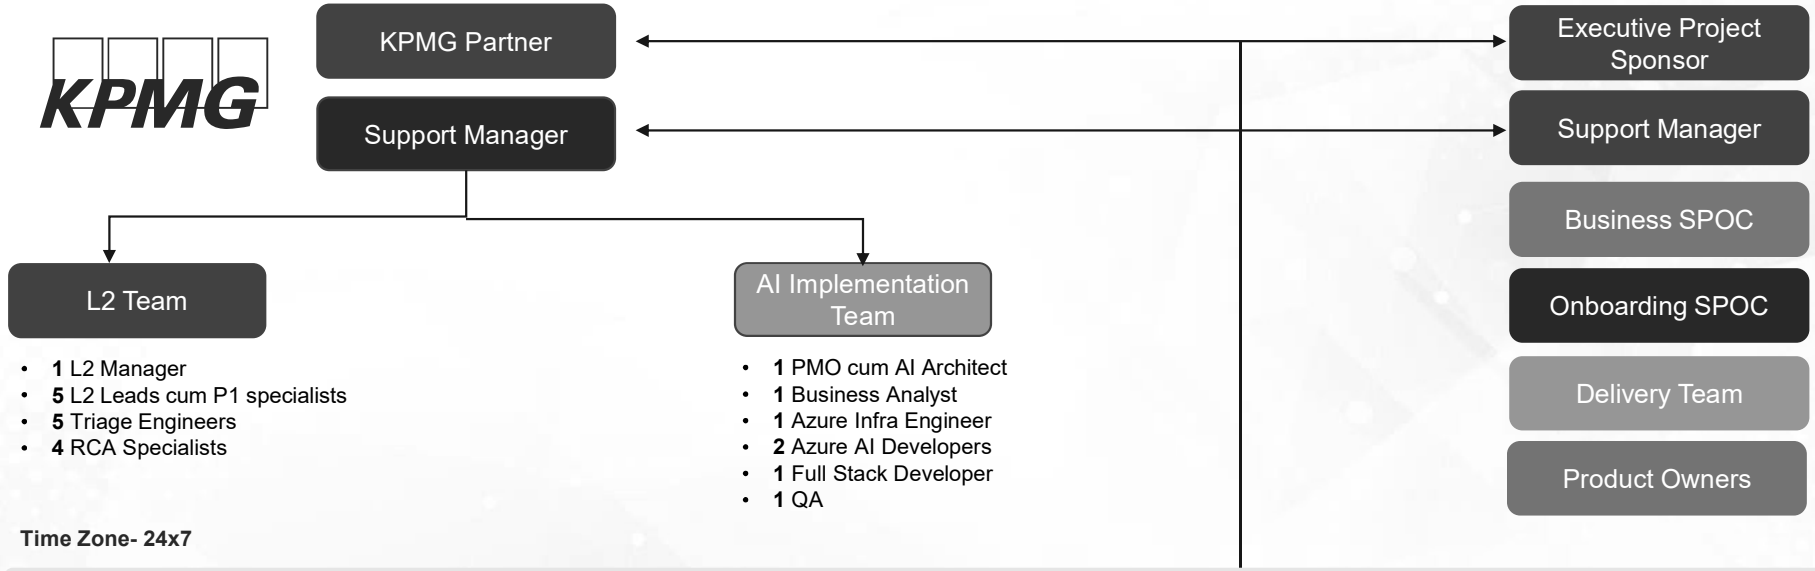

Our guidance documentation on any application information

Third Party Guidance

Rules of engagement for third parties agreed between KPMG and [CLIENT]

Agentic AI Solution

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Objective of the Agentic AI Solution

L2 Support (Triage & RCA) ITSM Automation for IndiGo Direct Channel (Website & App)

Intelligent Triaging | Auto RCA | Self-healing

What the solution will do

- Auto-triage incidents, priority optimization, validation and relevance, duplicate detection, information enrichment, probable cause analysis using historical patterns and live telemetry
- Auto RCA generation by correlating logs, alerts, live monitoring, past incidents, code repository and knowledge base
- JIRA creation, story points and acceptance criteria generation with confidence scoring, assignment to delivery
- Enable human-in-the-loop (maker-checker) actions for manual triage validation, RCA validation and approval, JIRA validation and approval
- Reporting and communication automation
- Continuously learn and improve from resolved incidents and feedback loops, with increasing confidence score, update knowledge base, perform self-healing (non-code actions)

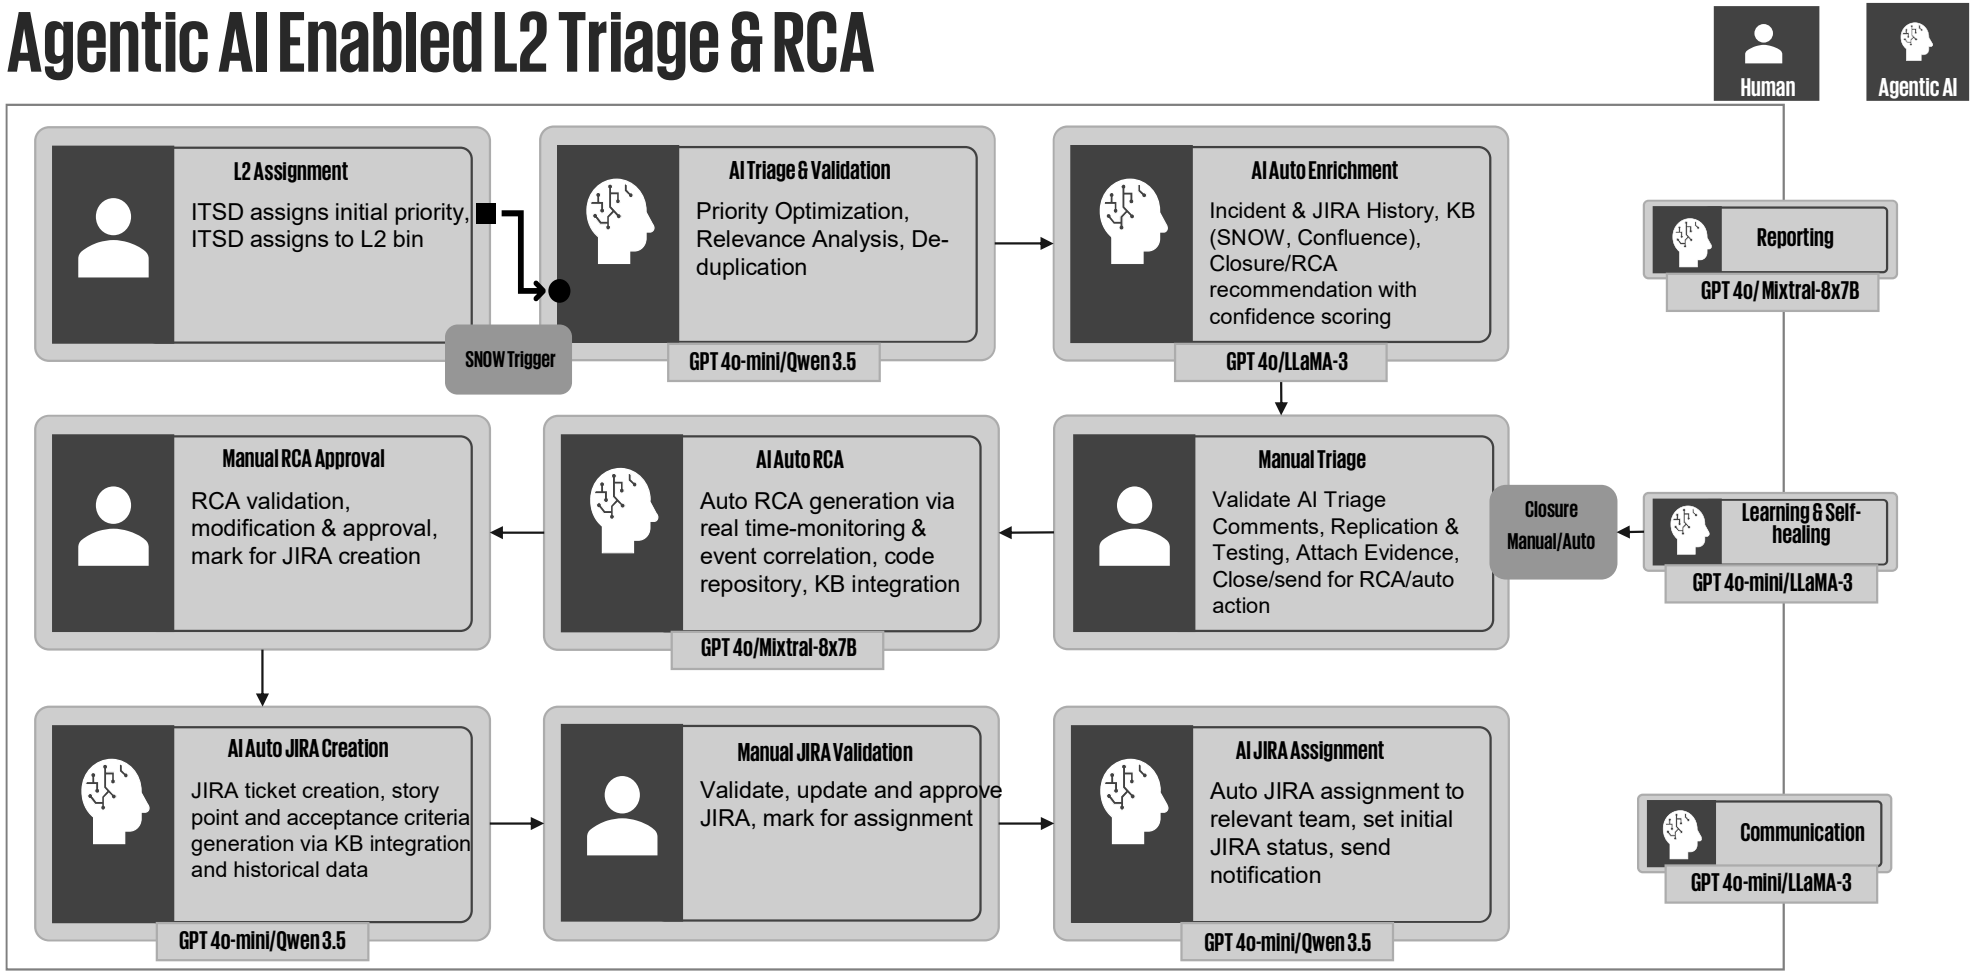

Key benefits delivered

- Faster MTTR through early triage accuracy and RCA assistance
- Improved P1/P2 handling with consistent, guided decision-making
- Reduced operational load on L2 and RCA teams by eliminating manual, repetitive tasks
- Higher service reliability through pattern-based detection of recurring issues
- Governed automation with full auditability, approvals, make-checker controls
- Scalable operations without linear increase in headcount
- Self-healing and proactive operations

KPMG

Solution Architecture

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Solution Architecture – Explained

Channels & Ingress

- ServiceNow as the primary system of record, with incidents initiated by users, L1 Service Desk, and monitoring signals
- Azure API Management (APIM) providing a secure ingress layer for all AI interactions, enforcing throttling, RBAC, and policy controls
- JWT / token-based validation ensuring strict separation of user, system, and agent identities
- Centralized telemetry capture via Azure Monitor / Application Insights for end-to-end visibility across ingress and processing
- Clear isolation of channels vs AI execution, ensuring ITSM integrity and audit readiness

Secure, governed entry into the AI platform without bypassing ITSM controls

Agentic AI Core

- Auto-Triage Agent as the first decision layer for classification, deduplication, and routing
- Orchestrator & Router Agent coordinating agent execution and downstream actions
- LLM-driven reasoning (Azure AI Foundry + LangChain) for context enrichment and RCA assistance
- RAG-enabled intelligence using Azure AI Search, knowledge bases, code repositories, and historical RCA data
- Specialized agents for RCA, JIRA creation, reporting, communication, and self-healing

Modular, explainable, and scalable AI execution with clear agent responsibilities

Control and Operations

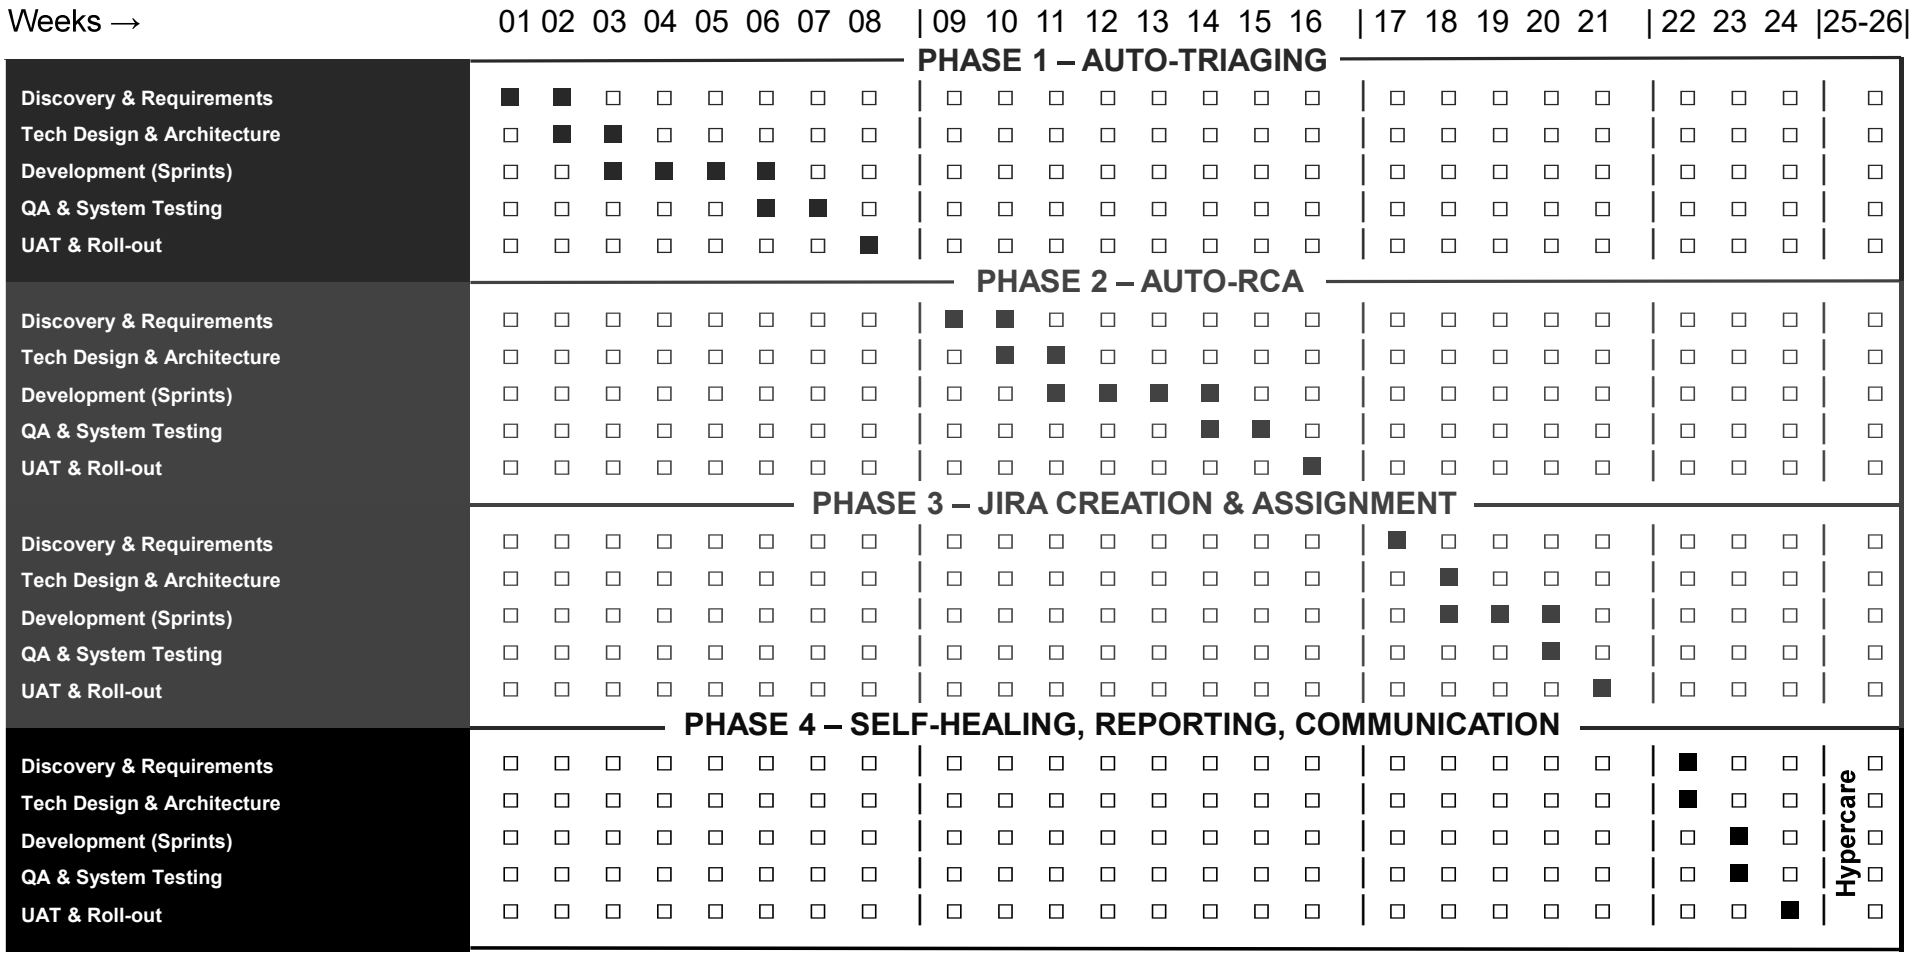

- Routing Agent enabling intelligent assignment, prioritization, and escalation
- Maker–Checker UI (L2-led) enforcing human approvals for RCA, remediation, and self-healing actions
- Admin controls for configuration, thresholds, policies, and governance
- Secure secrets management via Azure Key Vault
- Operational dashboards and audit logs for SLA, MTTR, and automation effectiveness

Enterprise-grade governance with no "black-box AI" and full operational control

Component Break-up

S. No.	Component Name	Type	Description
1	ServiceNow ITSM	System	Primary system of record for incidents, workflows, approvals, SLA tracking, and audit history. **Already in service at IndiGo.**
2	User / L1 / L2 Consoles	UI	ServiceNow UI and L2 operational consoles used for triage validation, RCA approval, and oversight
3	Azure API Management (APIM)	Platform	Secure API ingress for all agent interactions; enforces throttling, RBAC, JWT validation, and policy controls
4	Orchestrator & Router Agent	AI / Workflow	Central control agent responsible for sequencing agent execution, routing decisions, fallback handling, and state management
5	Agent Hosting Platform (AKS)	Platform	Azure Kubernetes Service hosting all Agent services (Auto-Triage, RCA, JIRA, Reporting, etc.) as containerized microservices
6	Auto-Triage Agent	AI Agent	Classifies incidents (priority, category, resolver group), performs deduplication, and applies confidence-based routing
7	Context Enrichment Agent	AI Agent	Enriches incidents using KB articles, historical incidents, telemetry signals, and code context via RAG
8	Auto-RCA Agent	AI Agent	Generates evidence-linked RCA hypotheses using logs, metrics, traces, and code history
9	JIRA Creation & Assignment Agent	AI Agent	Creates structured JIRA defects/stories from approved RCA and assigns them to the correct delivery teams
10	Self-Healing & Remediation Agent	AI Agent	Learns from historical resolutions and proposes remediation actions; execution is policy-gated and maker-checker controlled
11	Reporting Agent	AI Agent	Generates SLA, MTTR, MTTD, incident trend, and automation-effectiveness reports for operations and leadership
12	Communication Agent	AI Agent	Drafts SLA-aligned incident updates and stakeholder communications with optional approval for P1 scenarios
12	Maker-Checker UI	UI	Human-in-the-loop approval interface for RCA validation, remediation recommendations, and sensitive actions

KPMG

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Component Break-up

S. No.	Component Name	Type	Description
13	Azure AI Search	Data / RAG	Vector search and retrieval layer for KB articles, incident history, embeddings, and grounded context
14	Maker-Checker UI	UI	Human-in-the-loop approval interface for RCA validation, remediation recommendations, and sensitive actions
15	Knowledge Base (Confluence)	Data Source	Source of SOPs, runbooks, and operational documentation used for enrichment and RCA
16	Code Repository (GitHub / Git)	Data Source	Source of commit history and code context for RCA and defect creation
17	Observability Platform (Datadog, Azure Monitor)	Observability	Provides logs, metrics, traces, and alerts used by RCA and self-healing agents. **DataDog is already in service at IndiGo.**
18	Azure Blob Storage	Data	Stores any artifacts that are need to be kept outside Service Now and Confluence
19	Azure Key Vault	Security	Secure storage of secrets, tokens, API keys, and credentials used by agents and integrations

LLM Runtime – Option 1 (Managed Models via Azure AI Foundry)

S.No.	Component Name	Type	Description
1	Azure AI Foundry – LLM Runtime **(Option 1)**	AI Platform	Managed LLM inference platform with enterprise security, model governance, logging, and safety controls
2	GPT-4o / GPT-4o-mini **(Option 1)**	LLM	Primary managed LLMs for reasoning, RCA generation, structured outputs, and communication
3	Phi-4 / Phi-4-mini **(Option 1)**	LLM	Cost-efficient small models for high-volume tasks such as auto-triage, enrichment, and reporting

KPMG

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Component Break-up

LLM Runtime – Option 2 (Open-Source LLMs Deployed on AKS)

S.No.	Component Name	Type	Description
1	Open-Source LLM Runtime **(Option 2)**	AI Platform	Self-hosted LLM inference layer deployed on AKS using vLLM / TGI / similar runtimes
2	Qwen 2 / Qwen 3.5 (0.8B–4B) **(Option 2)**	LLM	Lightweight open-source models for auto-triage, classification, deduplication, and structured outputs
3	LLaMA-3 (8B) **(Option 2)**	LLM	Open-source model for context enrichment, reporting, and communication agents
4	LLaMA-3 (70B) or Mixtral-8x7B **(Option 2)**	LLM	Higher-capacity open-source models used selectively for complex RCA and remediation reasoning
5	AKS GPU Node Pools **(Option 2)**	Compute	Dedicated GPU-enabled Kubernetes nodes for hosting open-source LLM inference workloads
6	Model Serving Runtime (vLLM / TGI) **(Option 2)**	Platform	High-throughput inference server for serving open-source LLMs with batching and memory optimisation
7	Model Fine-Tuning Pipeline (LoRA / PEFT) **(Option 2)**	ML Ops	Enables local fine-tuning of open-source LLMs using ServiceNow ticket history and RCA data
8	Model Registry & Versioning **(Option 2)**	ML Ops	Stores trained model artefacts, LoRA adapters, and version metadata for controlled rollout
9	Open-Source LLM Runtime **(Option 2)**	AI Platform	Self-hosted LLM inference layer deployed on AKS using vLLM / TGI / similar runtimes

The above table showcases some potential open source LLMs which can be leveraged. While there are cost benefits, open-source technology has its own set of challenges and limitations, including risk related concerns.

****While KPMG will work back with IndiGo team on the technical solution, the final decision on the technology to be used will be with IndiGo.***

KPMG

Indicative Licensing

Service	SKU/License
Azure API Management (APIM)	Standard v2
Azure Kubernetes Service (AKS – Agent Hosting Platform)	Standard (Control Plane free; node pools billed as per VM size)
Azure App Service (Tool Gateway & Backend APIs – optional)	Premium v3
Azure Functions (Agent Tools & Triggers – optional)	Consumption / Premium (as per workload)
Azure AI Foundry / Azure OpenAI (LLM Inference) (Option 1)	Pay-as-you-go
Azure OpenAI – Embedding Models	Pay-as-you-go
Azure Cognitive Search (Vector / Semantic Search)	S1 / S2 (as required)
Azure Cache for Redis	Standard C1
Azure Blob Storage (Model Registry, Artifacts)	Hot Tier (capacity-based)
Azure Monitor – Log Analytics	Pay-as-you-go (ingest-based)
Azure Application Insights	Basic
Azure App Configuration	Standard
Microsoft Entra ID (Azure AD)	P1 / P2

The above licensing requirements are currently indicative and depending on the finalized solution approach the finalized BOM will be shared with IndiGo.

****The procurement for the same will be done by IndiGo directly from the concerned vendors***

KPMG

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Indicative Licensing

Service	SKU/License
AKS GPU Node Pools (LLM Compute) (Option 2)	GPU VM SKUs (e.g., NC / ND / NV series – consumption-based)
Open-Source LLMs (Qwen, LLaMA-3, Mixtral) (Option 2)	Open-source (Apache 2.0 / Meta license – no license fee)
LLM Model Serving Runtime (vLLM / TGI) (Option 2)	Open-source (no license fee)
Model Fine-Tuning (LoRA / PEFT) (Option 2)	Open-source (no license fee)

The above licensing requirements are currently indicative and depending on the finalized solution approach the finalized BOM will be shared with IndiGo.

****The procurement for the same will be done by IndiGo directly from the concerned vendors***

KPMG

The continuous improvement phase will focus on driving sustained performance optimization through AI-led insights and continuous automation enhancements

1. Transition & stabilization

Support Initiation (Primary & Secondary), Stabilization, SLA Observation, SLA Enforcement

01. Plan Support, KT

- Planning & Strategy
- Auditing existing systems & Baselining
- Identify use Case for Automation

02. Stabilize Support, Observe

- Clearing backlogs, Set KPI & SLAs
- Knowledge transfer
- SLA and KPI identification and baselining

03. Enforce SLA

- Discovery
- Detailed KT Sessions & Documentation of Processes
- Planning
- Shadow
- Platform assessment
- Walkthrough of different systems
- Providing Documentation & Access
- Final Handover to initiate the work

2. Execution & Optimization

Execution, AI & Maker-Checker

01. Operations & improvement

- In-Scope Operational Services (Run / BAU)
- 24x7 production support coverage
- Problem management & RCA
- Customer Experience Linkage
- Triage & RCA
- RCA Governance
- End-to-end workflow monitoring
- Incident lifecycle management

02. Agentic AI Solution

- Build and configure the Agentic AI layer
- Integrate observability and monitoring signals
- Configure ITSM automation workflows
- Set up human-in-the-loop controls and governance
- MVP
- Agentic AI Implementation
- Deployment, Hypercare
- Maker-checker enabled ITSM, Transition to Autonomous ITSM

3. Continuous improvement

Performance Optimization
Enterprise AI Enablement

01. Evolve – Drive KPIs

- Stakeholder Trust & Transparency
- Knowledge base Management
- Executive Dashboard
- Automation & Integrations with different systems
- Quarterly Executive Meets
- KPMG Performance Audits and Suggestions
- Industry Best Practices & Solutions
- AI Driving Insights & Reporting

↑	↓
Operational Excellence	Outage
AI Enabled Automation and resolution	Page Load time
NPS Score	Resolution Time
User Journeys Engagement	Incident Volume

KPMG

Agenda

05

Continuous Optimization

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Value Addition & Continuous Optimization from KPMG

Quarterly Planning

- Review **ITSM KPIs** (MTTR, SLA adherence, P1 frequency, backlog aging)
- Identify **high-effort / repetitive** activities suitable for Agentic AI automation
- Prioritize **automation candidates** across L2 Triage, RCA, and P1 handling
- Define quarterly **AI adoption roadmap** aligned to service stability goals
- Introduce new **AI capabilities** (auto-triage, RCA assist, duplicate detection)

Key Focus Areas - Quarterly

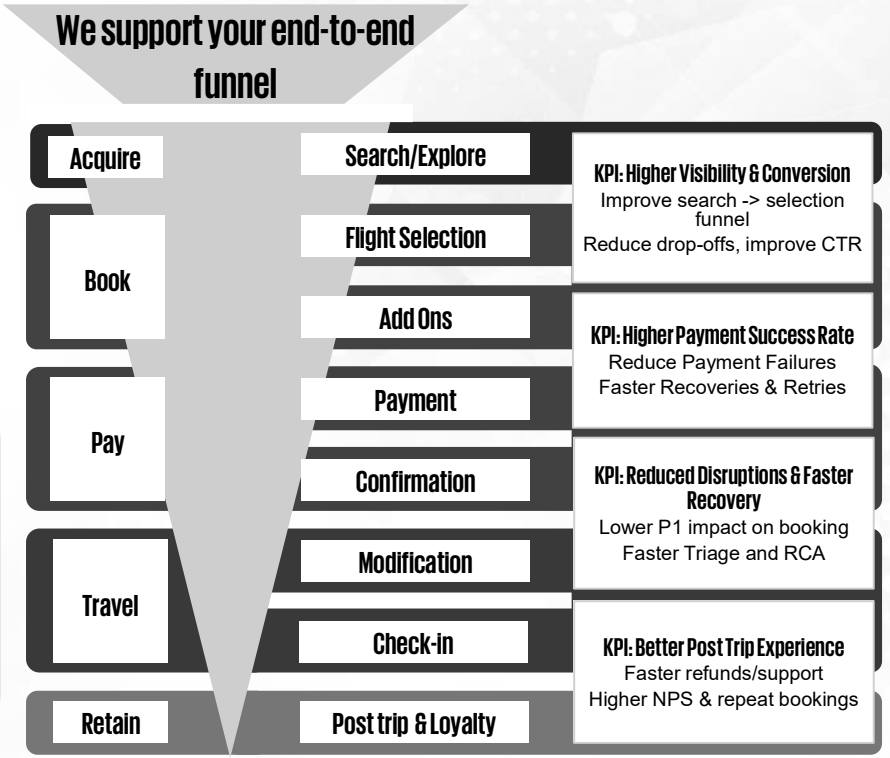

- Drive **Agentic AI adoption** across ServiceNow workflows
- Validate **maker-checker thresholds** and approval policies
- Review **automation accuracy, confidence scores**, and false positives
- Optimize **triage logic, RCA recommendations, and routing rules**
- Identify **monitoring gaps** and feed into AI learning loop

Quarterly business review

- Joint **business & ITSM review** with IndiGo stakeholders
- Track **before vs after AI impact** on MTTR, P1 handling, and effort reduction
- Review **major incidents, RCAs, and automation outcomes**
- Decide **next-quarter action plan** for:
  - Automation expansion
  - Process tuning
  - Skill uplift
- Align roadmap with **business critical periods** (peak ops, releases)

Continuous Value

- Continuous **model learning** from resolved incidents and feedback
- Periodic **AI policy & governance reviews** (who approves what, when)
- Improve **self-service and auto-resolution coverage**
- Introduce **new AI agents** for emerging use cases
- Ensure **auditability, explainability, and compliance** at every step

Agenda

06

KPMG proposed initiatives

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

1. Cognitive Observability driving paradigm change in conventional way of monitoring

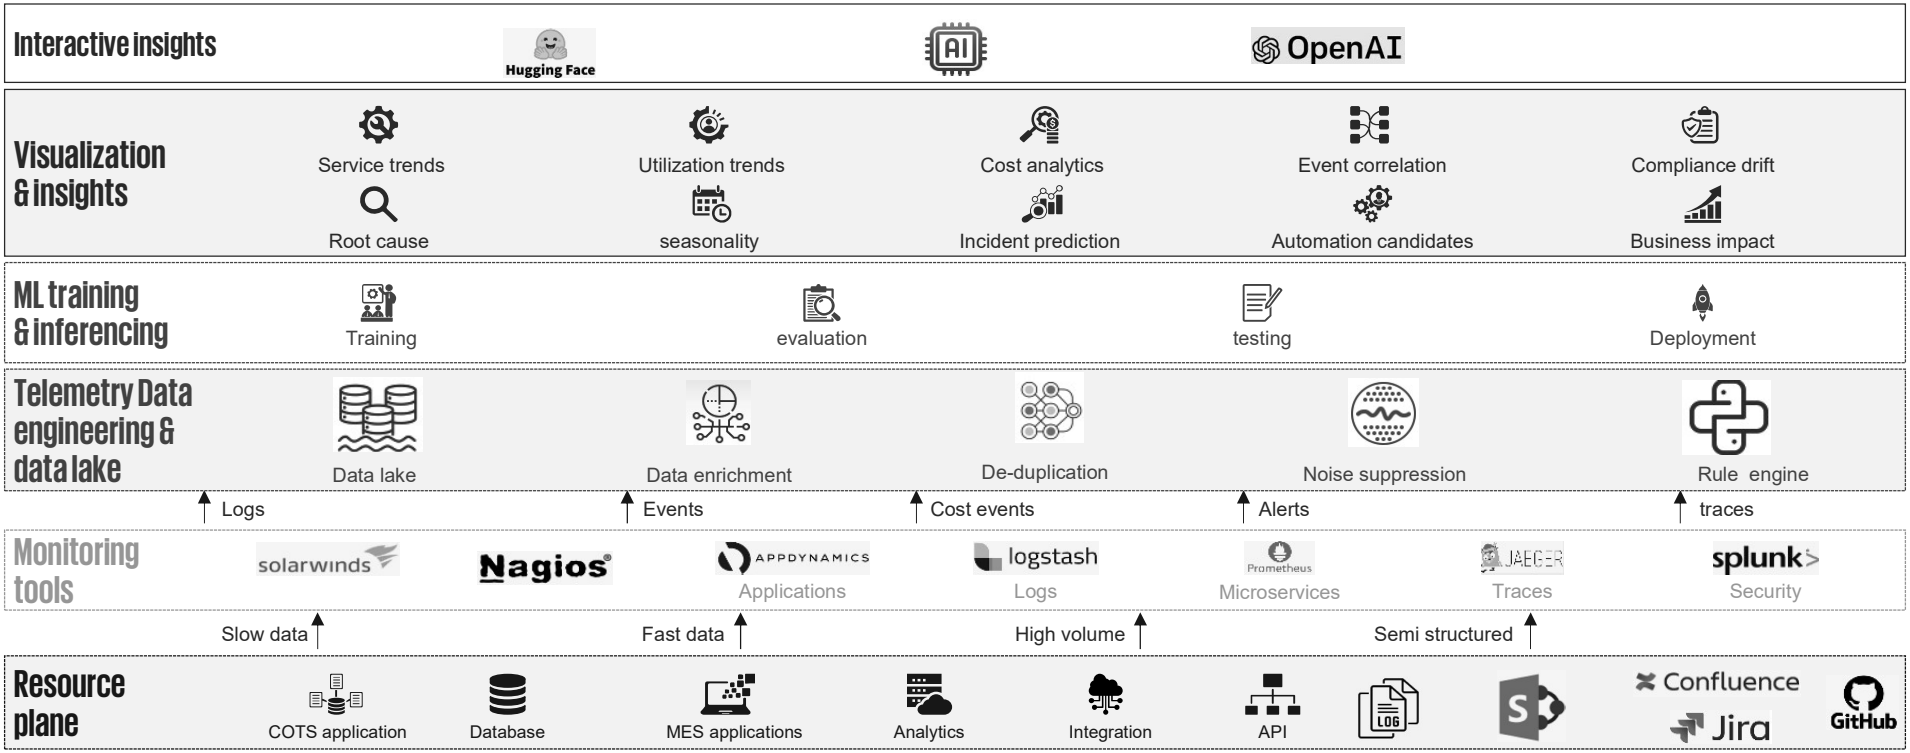

Monitoring

- Requires support engineer to have “eye on glass”
- Focuses on alerts and warning, events are overlooked
- KPI is MTTR and MMTD
- Uses traditional tools
- Root cause requires human interpretation and experience

Journey from Reactive to Proactive operations

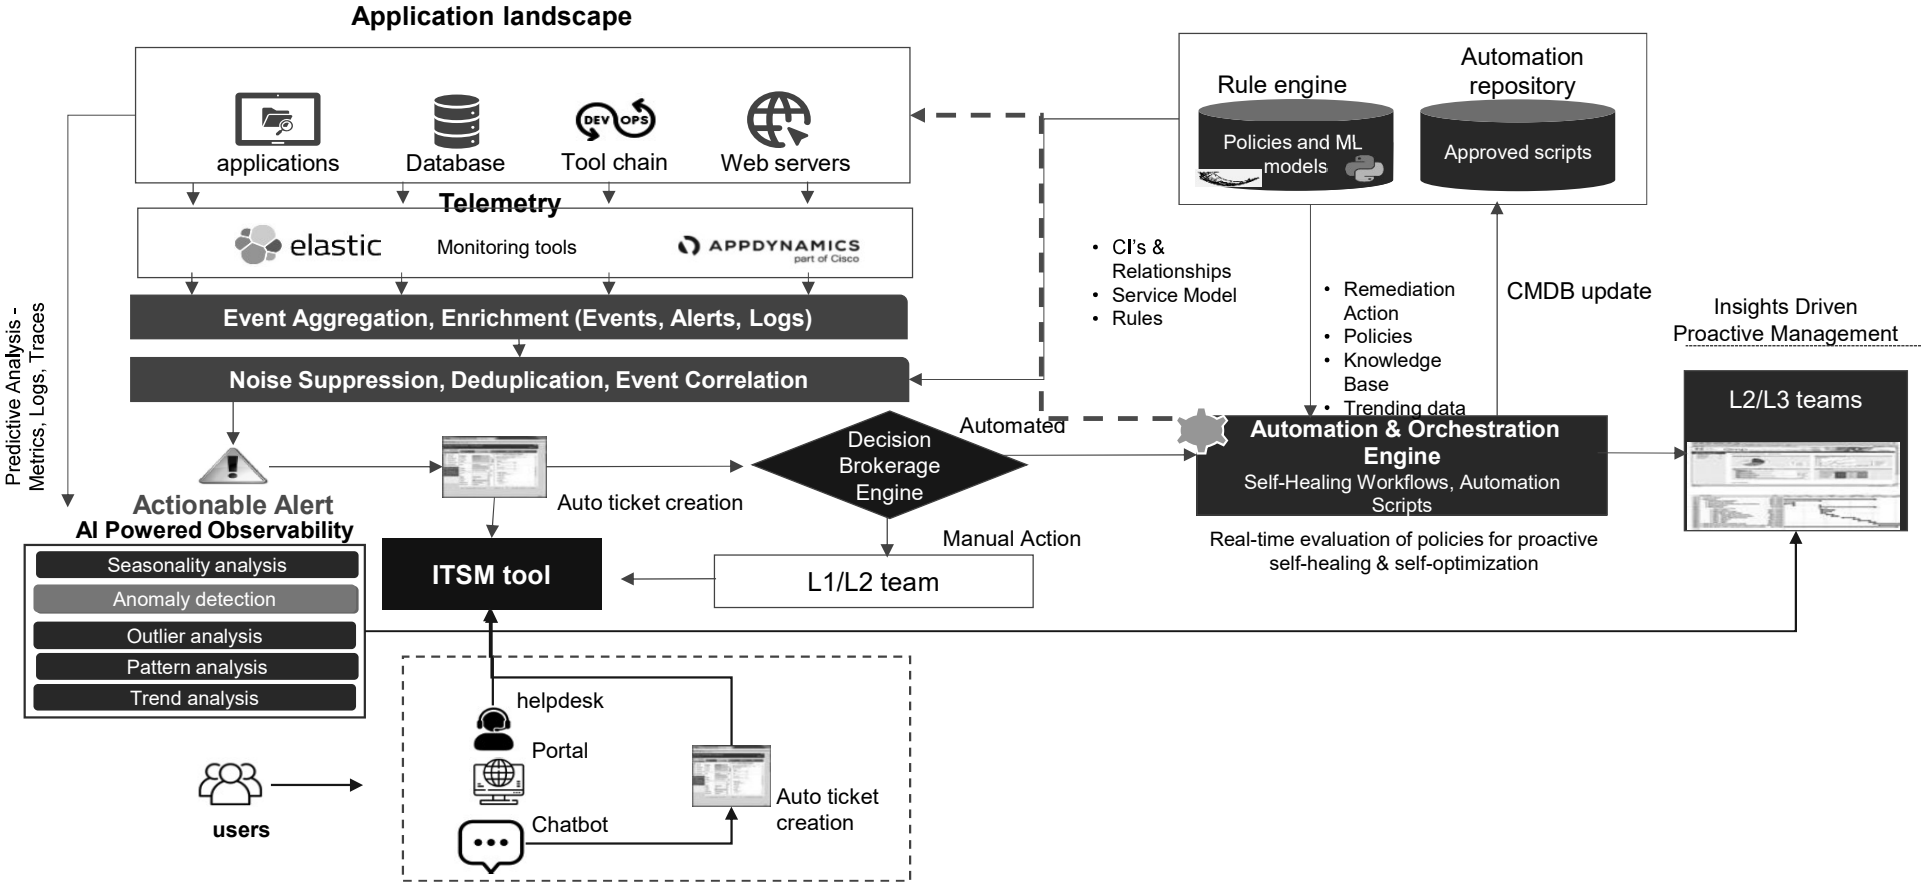

Cognitive observability

- Direct support engineer to fix potential issues rather monitoring alerts
- Focuses on analyzing all the telemetry data and depict overall health of applications and processes
- KPI is to reduce number of incidents by early detection
- Root cause is identified through ML models, training on vast amount of historical data

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

2. Self healing – Self service systems

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Agenda

07

Scope and Assumptions

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Scope of work – Overall

Geographical Scope

- L2 support for customer facing web (goindigo.in) and mobile application for end users only, scope excludes support to IndiGo partners and franchise
- The project will be delivered in onsite/offsite model. Onsite location will be IndiGo Gurugram office only, whereas offsite will be KPMG offices in India and employee home locations.
- KPMG project team will be based out of offsite location and project manager will travel to onsite location (IndiGo Gurugram office) for any meetings & discussions about 4-6 days in a month
- Any travel to IndiGo offices apart from Gurugram will be charged separately on actuals including OPE, lodging, boarding and travel
- During transition KPMG team will be in IndiGo Gurugram office for effective transition. IndiGo will ensure availability of required logistics (conference room, desk, projector etc.) for entire duration of transition

Technical Scope

- L2 support transition from incumbent team to KPMG team
- Implementation of Agentic AI solution where in infrastructure, tools and cloud subscriptions are to be provided by IndiGo
- KPMG will only pick up incidents that have been put into the ServiceNow system

Integration areas

- All required integration enablement with Service Now, Jira and any other systems, via an enterprise integration platform like Service Bus etc., will be implemented by IndiGo
- Integration end-points required for implementing agentic AI solution will be provided by IndiGo

Functional Scope

- Issues related to web portal functionalities will be triaged and RCA analysis done where required and handed over to the respective L3 team. KPMG team will not be responsible for fixing the issues in the concerned tickets
- KPMG will only manage, orchestrate and govern RCA solution implementation
- For issues / queries related to IndiGo brand, customer generic feedback & suggestions, application UI/UX etc. the L2 team will not get into triaging or RCA analysis but will create incidents and/or JIRA tickets for these and will assign to respective teams. L2 team will also track closure of the same
- Knowledge transfer to new vendor in case needed has been envisaged for a period of two weeks only
- The support will be provided in English language only

Volumetric scope

- Maximum incidents per month: 500
- We have envisaged a maximum monthly fluctuation of 5%. Incase the number of tickets in a month is beyond the threshold the same will be carried forward into the next month, or additional team deployment can be done post change request approval from IndiGo.
- A maximum of 1.5 hours has been envisaged to triage an
- A maximum of 20% tickets will require RCA
- KPMG would validate the incident count and average triage time during stabilization phase. Incase of variations in ticket volume and average triage time will be handled through change request process

KPMG
© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Scope of work – Overall

Service level agreement

- KPMG proposes six months of SLA baseline process after transition completion.
- IndiGo will ensure that entire incumbent team is available till end of month two of the transition. Delays caused due to unavailability of incumbent team will be handled through CR process
- SLA will be applicable for triaging only; KPMG wouldn't take any SLA for RCA since it involves multiple parties.
- RCA analysis is only considered during normal business hours (16*7 hours) since it requires multiple teams to work together
- While Transitioning – Existing Tickets should be solved by existing team and KPMG would work only on newer tickets.
- During baseline period SLA will be monitored and reported, however service credit and debit framework won't be implemented
- Proposed SLA credit/debit framework in RFP will be evaluated post baseline period, and a mutually agreed framework will be implemented for the remaining duration of project.
- Any SLA violation caused due to system issues will be handled through the exception process
- While KPMG team will be performing NPS score analysis, however KPMG won't be accountable for any degradation in NPS score

Training Scope

- Not applicable
- Any training to IndiGo team, L1 support desk and L3 team is out of scope

Enhancement and Value Adds

- The agentic AI solution proposed by KPMG is an optional element with separate commercials
- All the software, hardware and subscription / Licenses for LLM etc. will be provided by IndiGo.
- The outcome of agentic AI solution is subject to data quality, model accuracy process adherence etc., KPMG will not be responsible in case agentic AI solution is not meeting expected outcome due to data quality, model performance etc.
- KPMG might suggest various initiative to optimize L2 work and ITSM process, however these initiative will be handled as separate project and implemented through change request process

Reports

KPMG will provide following standard ITSM reports

- No. of incident reported priority wise per month
- SLA adherence and violations
- Repeat incidents and no. of RCA completed
- Productivity improvement recommendations for business considerations

KPMG
© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Detailed scope – L2 Support

Phase	In Scope Activities	Out of Scope	Assumptions
L2 Triaging & RCA Support	• Receive incidents in L2 bin from L1 Service Desk, Monitoring tools (Datadog) and emails (WnM Support DL) • Incident prioritization and categorization, NPS analysis and creation of incidents and JIRA tickets based on that • Support Volumetrics: The current indicative Support Volumetrics which has been considered for team sizing are as below. - Maximum incidents per month: 500 (including falsely allocated ones) - Safe fluctuation tolerance: up to 5% within a month - Average time to triage a ticket is around 1.5 Hours for • Perform initial technical triage to: - Validate incident authenticity (noise vs real issue) - Identify impacted service, application, or channel • Assign incidents to appropriate RCA Web / RCA Mobile / Infra / Vendor teams • Act as incident owner until resolution handover to L3 team • Implement early mitigation / workaround where feasible • Coordinate with Support Leads for escalation decision • Ensure SLA clock control and early breach risk identification • Provide timely updates to stakeholders during major incidents • Maintain clear incident timeline and audit trail in ITSM • Identify duplicate / related incidents and link them for RCA • Support shift handovers with risk and dependency notes	• L1 and L3 support • Bug fixing and feature enhancement • Implementation of Agentic AI solution is optional and considered in scope after approval from IndiGo • Any training or upskilling of IndiGo users, L1 or L3 team and IT team • Procurement of hardware, software licenses, cloud and AI subscription • Business communication and organization change management	• For incidents where development work will be required post creation of JIRA tickets and assignment to delivery team, KPMG will only be responsible for the SLA up-to the point where JIRA ticket was assigned to the delivery team. • L2 Triage, RCA and Lead will work from IndiGo premises (Gurgaon) only in general shifts and on weekdays. Rest they will work remotely. However, in special scenarios or crises, specific team members can be asked to work from office in non-general shifts and/or weekends, with prior intimation. • Any sustained increase beyond 500 incidents per month will be treated as a scope variance. • A sustained increase is defined as:>500 incidents/month for two consecutive months, - OR>10% increase month-on-month, whichever occurs earlier. • In case the number of tickets exceeds the planned capacity as per above – tickets will need to be prioritized and shifted to subsequent periods or capacity increase will need to be done post approval from IndiGo • Any reduction in ticket count wont result in support cost reduction due to dependency on shift coverage • Consistent ticket reduction (more than 25% for three consecutive months) will trigger the effort re-baselining discussion . The revised estimation will be presented to steerco and mutually agreed decision will be taken • A consistent increase more than 10% for three months will trigger the effort re-baselining. The revised estimation will be presented to steerco and mutually agreed decision will be taken

KPMG

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Overall Project Scope, Assumptions & Out of Scope – Transition

Phase	In Scope Activities	Out of Scope	Assumptions
Transition	• The first two months from the commencement of this engagement shall be considered the Transition Period. During this phase, the following activities will be jointly executed by IndiGo and KPMG: - Onboarding of resources and establishment of knowledge repositories. - KT sessions and walkthroughs of existing D2C web & mobile applications by incumbent team - Shadow support wherein KPMG team will shadow incumbent team who will be responsible for incident closure - Primary support wherein KPMG team will resolve incidents, and incumbent will do the shadow. SLA won't be applicable in this phase - L2 ticket handling workflow and escalation matrix. - Baseline setup of application-wise active user count and initial ticketing trends. - Access provisioning and environment readiness for KPMG team User baseline - This period is non-SLA bound, though total service quality will be monitored to enable early correction and process maturity. • We have planned transition for two months, any delay in transition completion caused by IndiGo/incumbent team will be handled through CR process • KPMG will prepare and maintain a detailed Transition Plan including Knowledge Transfer (KT) methodology, timelines, milestone checkpoints, and resource alignment plans. - Detailed Transition Plan with KT components - Service Readiness checklist - Transition completion report - Final sign-off	• Maintenance and Fixing Hardware/Network related problems • Preparing and cleaning source data for upload / interface with .NET, COTS etc. • Issues raised from applications that are not part of the in-scope application list. • Clearing backlog tickets • Procurement of any software tools and services • Change in existing process and tools configuration • SLA ownership • Configuration change in ITSM tool, monitoring tool and Jira system • Any payment to incumbent team during or post migration • Incumbent team is responsible for resolving incidents raised during transition period • Creating KT documentation from scratch	• During the transition of L2 support services, it is assumed that: - The incumbent support team will be responsible for closure of any existing incident backlog. - The definition of “backlog” and confirmation of zero/acceptable backlog will be jointly reviewed and formally agreed by IndiGo, incumbent team, and KPMG prior to commencement of the transition phase - IndiGo will be responsible for availability of incumbent team for knowledge transfer, any delay in providing KT but incumbent team will be handled through CR. - We assume that incumbent team is having well documented code and knowledge base (as per CMMI Level 5), delay in transition timeline due to poor documentation quality and lack of co-operation from Incumbent will be handled through the CR process - IndiGo will assign a dedicated transition manager to facilitate transition and address any roadblocks caused by IndiGo - IndiGo will ensure that incumbent team is available in office during entire transition period for smooth and seamless transition - IndiGo will provide access to Document management system for storing KT documentation - KPMG assumes that an enriched documentation about applications, incidents, known errorr is already in place. KPMG would performed minor changes to update the documents with missing details (upto 10%)

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Scope summary– Agentic AI model implementation

Phase	In Scope Activities	Out of Scope	Assumptions
Agentic AI Implementation	• **KPMG would deploy a total 7 agents:** - 1 x Orchestrator & Router Agent - 1 x Auto-triage Agent. - 1 x Context-enrichment Agent - 1 x Auto-RCA Agent - 1 x JIRA Creation & Assignment Agent - 1 x Reporting Agent - 1 x Self-healing Agent • **Total 3 UI surfaces:** - 1 x Maker-checker UI - 1 x Admin/Configuration UI - 1 x Reporting Dashboard • **Option 1 – Managed LLMs, upto 3 managed models** - 1 large reasoning model (e.g., GPT-4o) - 1 small/high-throughput model (e.g., GPT-4o-mini / Phi-4) - 1 embedding model • **Option 2 – Open-Source LLMs, upto 3 open-source models** - Small model (e.g., Qwen 0.8B–4B) → triage - Medium model (e.g., LLaMA-3 8B) → enrichment, reporting, communication - Large model (e.g., LLaMA-3 70B / Mixtral) → RCA & self-healing reasoning	• Autonomous remediation without human approval • Cross-functional agents (HR, Finance, CRM, etc.) • Subscription, hardware and licenses for setting up agentic AI • Predictive or prescriptive actions outside ITSM incidents • LLMOPS- model monitoring and management • Mobile-specific UI • Unlimited model experimentation • Continuous retraining without approval • Model architecture changes • Write-back to KB (except Service Now & Confluence) or code repositories • Agentic AI Implementation for additional enterprise systems • Custom bi-directional integrations • DR beyond standard Azure capabilities • Dedicated cluster per agent • Subscription of azure foundry, open AI model and open-source models • Token cost as charged by OpenAI or any other commercial AI product	• The Agentic AI implementation, will be done based on hybrid model [IndiGo Gurugram]. • Working hours for AI implementation team will be 9AM - 5PM (Monday-Friday). • Implementation resources will work remotely from Gurgaon/Bengaluru and will be available in IndiGo premises on on-demand basis. • A dedicated Azure subscription will be created specifically for Agentic AI development and operations. • ServiceNow configurations, workflows, approval matrices, and closure taxonomies required for automation (e.g., WAD, Invalid, Duplicate, Reroute) will be done by KPMG. • Historical incident and knowledge data required for training, tuning, and validation of Agentic AI will be provided in agreed formats • KPMG with its best endeavor try to optimize model performance, however KPMG doesn't take any bottom-line/accountability for outcome produced by AI agents • IndiGo will ensure API integration from AI solution to various systems and report • The effectiveness of AI agent is depend on the training data quality, poor data quality will lead to incorrect recommendation and hallucination, KPMG wont be responsible for such issues encountered due to poor data quality

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Scope summary – Agentic AI deployment and integration

Phase	In Scope Activities	Out of Scope	Assumptions
Agentic AI Implementation	• **Total 6 integrations:** - ServiceNow (incident lifecycle, approvals, updates) - JIRA (defect / story creation & assignment) - Knowledge Base (Confluence – read, update) - Code Repository (Git – read-only) - Observability platform (Datadog / Azure Monitor – read-only) - Notification channels (Teams / Email – templated) • **Environment & Deployment** - 1 × AKS cluster for agent hosting - Up to 3 environments: Dev, UAT, Prod - Standard CI/CD for agent services • **Governance & Controls** - Confidence thresholds per agent - Maker-checker approval for: • RCA • JIRA creation • Self-healing recommendations - Full audit logging of: • Decisions • Model calls • Approvals & Remediation outcomes	• Autonomous production changes • Regulatory compliance tooling • Custom audit frameworks • Third-Party Licensing: Enterprise licenses/subscription for OEM products will be IndiGo's responsibility. • Any security assessments, DPIAs, or risk reviews beyond standard enterprise processes will be treated as out-of-scope unless explicitly included. • KPMG Wont be responsible for any security, reputational or data loss issue caused by Agentic AI system. • Monitoring health of integrations that are created to integrate Agentic Ai solution to IndiGo applications • Infrastructure subscription, provisioning and ongoing monitoring & management	• Agentic AI will initially operate under a human-in-the-loop (maker-checker) model for all critical actions, including: - Incident re-routing - RCA sign-off - JIRA ticket creation - Self-healing recommendations • Any progressive increase in autonomy will be: - Metric-driven (accuracy, approval success rate) - Subject to governance and steering committee approval • No data cleansing, semantic remediation, or data engineering beyond agreed scope is assumed • IndiGo will be responsible for enabling integration with the external system

KPMG

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Overall Project Scope, Assumptions & Out of Scope – AI ITSM Automation

Phase	In Scope Activities	Out of Scope	Assumptions
Agentic AI Implementation	• **Training Model & Principles** - Training Mode: TTT (Train-the-Trainer) - Delivery Mode: Onsite / Remote (as agreed) - Target Audience: L2 Support Team - Total L2 Participants: 21 users - Training Environment: UAT / Sandbox - Training Approach: Training is delivered incrementally during UAT of each phase, covering only the agents and UI capabilities introduced in that phase. - Hypercare: will be provided for 2 calendar weeks post go-live of Agentic AI implementation phase 4 from client office in IndiGo Gurugram, India • **Phase 1 – Auto-Triaging (UAT-Aligned Training)** - Audience: 21 L2 users - Sessions: 2 sessions - Duration: 1 hour per session - Total Effort: 2 hours • **Phase 2 – Auto-RCA (UAT-Aligned Training)** - Audience: 21 L2 users - Sessions: 2 sessions - Duration: 1 hour per session - Total Effort: 2 hours	• Custom SOP creation • Ongoing refresher training • Training beyond L2 roles	• Retraining or refresher training for the same users after completion of the planned phase-wise training sessions is excluded, unless explicitly agreed through a change request. • Production environment training or live incident hand-holding is excluded; all training will be conducted in UAT and/or sandbox environments only. • Extended production support or operational hand-holding beyond the defined hypercare period (two calendar weeks post Phase 4 go-live) is excluded. Ad-hoc or on-demand training sessions requested outside the agreed training schedule or UAT-aligned phases are excluded. • Any additional training effort arising due to scope changes, new Agentic AI capabilities, or tool changes post UAT sign-off will be handled via a formal change request.

Overall Project Scope, Assumptions & Out of Scope – AI ITSM Automation

Phase	In Scope Activities	Out of Scope	Assumptions
Agentic AI Implementation	• **Phase 3 – JIRA Creation & Assignment (UAT-Aligned Training)** - Audience: 21 L2 users - Sessions: 1 session - Duration: 1 hour - Total Effort: 1 hour • **Phase 4 – Self-Healing, Reporting & Communication (UAT-Aligned Training)** - Audience: 21 L2 users - Sessions: 2 sessions - Duration: 1 hour per session - Total Effort: 2 hours • **Training Artefacts (In Scope)** - Phase-wise training decks (PDF) - Step-by-step user guides: • Maker-Checker UI • Admin / configuration basics - Sample scenarios used during UAT - Session recordings (where permitted)		

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Assumptions

#	Items
1	Access provisioning for all the KPMG resources to ITSM, monitoring tools, code repository, dev, QA and UAT environments etc. will be IndiGo's responsibility. The TAT for any such request from the day the request is raised will be no more than three business days. Any significant delay caused by non-conformance to these TATs will be discussed in the steering committee to provision additional time-cost.
2	IndiGo will identify and assign transition SPOCs from different functions/areas like ITSD, Delivery, Monitoring etc. who will be responsible for making sure that the provisioning TATs are met. They will also be part of a governance committee comprising of KPMG and IndiGo stakeholders that will oversee the transition and will report to the IndiGo ILT.
3	Language of communication will be English. All project documentation will only be English Language. All resources will be India based.
4	IndiGo will identify and assign an on-boarding SPOC who will co-ordinate with transition SPOCs for different requests like infra provisioning, logistics, ID creation, Laptop allocation etc.
5	IndiGo would assign a dedicated Project manager, who would be single point of contact for KPMG team. The project manager would provide requested information to the team in both business, and technical aspects and will also provide access to functional experts in both the business and technical areas, as necessary. Similarly, the project manager would provide acceptance on all deliverables within 3 working days. KPMG will consider the deliverable as deemed accepted in case no feedback or sign off is received within 3 working days. Any delay in go-live decision will impact the overall timeline and budget.
6	IndiGo will be responsible for provisioning dedicated seating arrangement for general shift members including the support manager at its Gurgaon premises. The exact numbers will be given to the onboarding SPOC once contract is awarded.
7	Any new development/monitoring/configuration/advisory activity will be taken as a change request and will be chargeable at the rate of INR 2000 per hour.
8	Agentic AI development will be carried out on Azure AI Foundry, to which IndiGo has an active subscription. All AI workloads, models, orchestration components, and telemetry will be hosted within this platform.
9	All Azure resources required for Agentic AI (AI Foundry projects, storage, key vaults, functions/APIs, monitoring) will be provisioned within this dedicated subscription and governed by IndiGo's cloud policies.
10	Disaster Recovery setup and configuration is not within the scope of this proposal
11	IndiGo will provide the required **approvals and access** to **production source code / GitHub** for incident debugging and RCA.
12	IndiGo will provide the required **approvals and access** to **production source code / GitHub** for incident debugging and RCA.
13	The vendor will operate on IndiGo's **existing ServiceNow instance** for incident/task lifecycle, and IndiGo will provision the required roles/permissions.
14	IndiGo will provide access to required **monitoring/observability tools** and data feeds (APM/infra/logs/network) to enable alert ingestion and correlation.
15	IndiGo will make available the necessary **log sources, crash reports, performance metrics**, and environment details for debugging and RCA.

KPMG

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Assumptions

#	Items
16	Incident sources (ServiceNow, monitoring tools, application logs/alerts, end-user tickets) will be available for **automated ingestion** via agreed interfaces/APIs.
17	IndiGo Digital Leadership will provide timely decisions for **RCA approval** and dispute resolution when needed.
18	Deployment approvals will follow IndiGo's governance (Digital Leadership and/or CAB), and **rollback plans** will be part of release approvals.
19	The solution will be measured against **24x7x365** operations expectations, and planned maintenance windows will be **mutually agreed** and excluded per availability formula.
20	Ticket volumes may vary with **no hard limits**, and seasonal spikes will be handled through scalable solution design and agreed operational model.
21	For AI triage, IndiGo will enable access to sufficient **historical incident patterns / prior resolutions** to support "context-aware triage."
22	For AI RCA, IndiGo will enable access to relevant **change/deployment history** and telemetry to support correlation.
23	AI/ML outputs will be governed with **explainability, feedback loops, override and fallback**, and these governance workflows will be accepted operationally.
24	Role-based access, SSO and encryption requirements will be supported by IndiGo identity/security patterns and required approvals will be provided.
25	Any personal data (PII) present in logs/tickets will be handled per IndiGo requirements, including masking and retention rules and should not be shared with KPMG team.
26	All service levels related to incident classification time, auto-triage accuracy, RCA generation timelines (including standard and detailed RCA), time to submit RCA to delivery/POD teams, availability of the automation platform, maker-checker approval turnaround, JIRA defect creation and assignment timelines, MTTR improvement targets, and associated liquidated damages thresholds shall be jointly defined, baselined, and finalized during the mobilization and stabilization phase.
27	The final SLA definitions will include clear measurement start/stop points, inclusions and exclusions, dependency boundaries, and evidence sources, and will be aligned to operational practicability, governance requirements, and shared control across vendor and client teams.
28	Until above mentioned joint baselining is completed and formally signed off, all SLA values referenced in the RFP will be treated as target objectives and not as contractually enforceable service credits or liquidated damages triggers.
29	IndiGo IT will provide laptop to support team with adequate configuration and software installed. The laptop cost and software licenses cost will be borne by IndiGo.
30	Any connectivity and data transfer challenges should be addressed by IndiGo and not within the scope of this proposal. Any delay will result in change management process.

KPMG

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Assumptions

#	Items
31	IndiGo will not, directly or indirectly, solicit the employment of the personnel during the engagement or for a period of twelve months following its expiry or termination, without the prior written consent of KPMG. This prohibition will not prevent IndiGo from running recruitment-advertising campaigns nor from offering employment to an employee of KPMG who may respond to any such campaign.
32	IndiGo will ensure that work performed by or required of the Personnel, including attendance at meetings internally or with third parties, will not cause the personnel to become a shadow employee or a de facto employee of IndiGo or of any companies in the Interglobe group for statutory or other purposes. Any advice given by the personnel to the client will always be given by the personnel solely in a professional capacity as employees of KPMG and not as shadow employees or de facto employees or other officers of IndiGo or of any companies in the Interglobe group.
33	KPMG will not function in a management or employee role to make decisions that could have an effect on IndiGo business.
34	Any material changes to the job profile during the term of associates will be brought to KPMG's notice, upon receipt of which KPMG will have the right to change the associates committed, ensuring appropriate replacement and matching of required skills
35	During the term of the associate at IndiGo, he/she will be governed by KPMG's policies on leave, training etc. Further, the associate will be allowed to attend all relevant trainings conducted by KPMG with IndiGo prior written content

© 2026 KPMG India Services LLP, an Indian limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

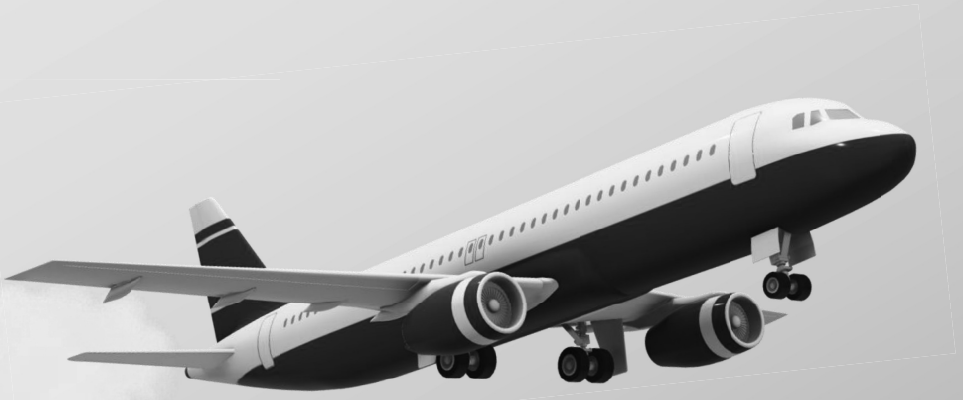

Out of Scope

#	Out of Scope Item (for proposal)	RFP basis (why we classify as out of scope)
1	**Implementing / replacing IndiGo's ServiceNow platform** (new instance setup, platform rollout)	RFP states the vendor will work on the **existing ServiceNow instance** for incident/problem/change workflows.
2	**Owning application feature development / enhancements as BAU delivery** (beyond defect identification + handoff)	RFP scope positions the vendor to **identify root cause** and **transition to delivery via JIRA**, coordinating for fixes/validation—delivery remains a separate function.
3	**Direct execution of production deployments / release approvals** (acting as CAB / final approver)	RFP specifies deployment approvals are taken from **Digital Leadership and/or CAB** with rollback planning—vendor supports, but approvals sit with IndiGo governance.
4	**Providing / procuring third-party monitoring tools as a default** (unless explicitly agreed)	RFP requires integration with monitoring tools and acting on alerts, but does not mandate vendor-procured tooling; it asks for integration and correlation capability.
5	**Support for non-direct channel applications** not part of the Direct Channel scope (unless identified/confirmed by IndiGo)	RFP scope is explicitly for **Direct Channel (Website and App)** incident management, triage and RCA.
6	**Support outside the stated technology landscape** (unless explicitly brought into scope)	RFP specifies support across **.NET, React, iOS, Android**, web micro-frontends on **AEM**, and mobile apps on **Firebase**, plus APIs/middleware/DBs/3rd parties—anything beyond needs explicit inclusion
7	**Any subcontracting / third-party delivery of scope**	RFP explicitly states **no subcontracting of any part of the scope** is allowed.
8	**License / commercials not explicitly covered under agreed commercial headers** (e.g., new cost categories not in the commercial response format)	RFP provides a specific commercial response structure (License subscription, Implementation, Managed support, Customization, Any other). Items outside these require explicit agreement.
9	**Changes requiring custom code where configuration suffices** (unless justified and approved)	RFP states maintainability/configurability expectations: configuration changes should not require custom code wherever possible; heavier customization needs explicit approval.
10	**Any activities not tied to ITSM incident/problem/change/service workflows or performance management** for Direct Channels	RFP scope is centered on end-to-end incident management + ITSM workflow automation + website/mobile performance management; unrelated activities would be outside scope.

Investment

Our objective is a long-term sustainable strategic relationship with IndiGo which adds value to both parties.

Professional Fee	Amount INR	Fee (INR in Words)
ITSM Managed Support (Yearly)	[redacted]	[redacted]
Agentic AI Implementation (One Time) Indicative	[redacted]	[redacted]

Terms:

1. Above fees excludes GST and any other tax, duty, cess or other government instituted levies that may become applicable to any/ all the transactions underlying in this engagement.
2. Any additional scope changes will be charged at [redacted] This would follow the change request procedure as mutually agreed.
3. Post Hypercare, Optional AMC (shared support) for ITSM Agentic AI can be procured by IndiGo at [redacted] with a minimum commitment of 100 hours per month.
4. The above price includes only professional services and excludes any license hardware and subscription cost
5. Project delivery will be done via remote access. All out-of-pocket expenses (Travel, Accommodation, Conveyance etc.) resulting from specific request IndiGo for KPMG personnel to travel will be charged at actuals after prior approval from client. Travel will be as per KPMG Policy
6. Any delay in completion of the Services will be brought up before the steering committee which will have equal number of members from both the parties. Steering committee will prepare a mutually acceptable plan to address such delays.
7. Year on Year escalation fee will be at least 10% and driven by the market inflation
8. KPMG will invoice monthly and the amount will be due immediately upon invoicing.
9. KPMG will be using its standard rate card for sizing any CR effort
10. Above commercials excludes night shift allowances, late night travel cost and compensatory off, These will be charged to IndiGo based on the KPMG policies.
11. The current pricing accommodate up to 5% increase in the ticket volume. The 5% additional tickets won't be considered under SLA.
12. Addition of resources can be done via Chage Requests at agreed rate cards.

Modernization and managed services support for core banking solution for a Canadian regional bank

Financial services co-operative bank | **~6M customer base** | **Retail, lending , consumer finance** | **Quebec and Ontario region** | **On –premise infrastructure** | **Flex cube core banking**

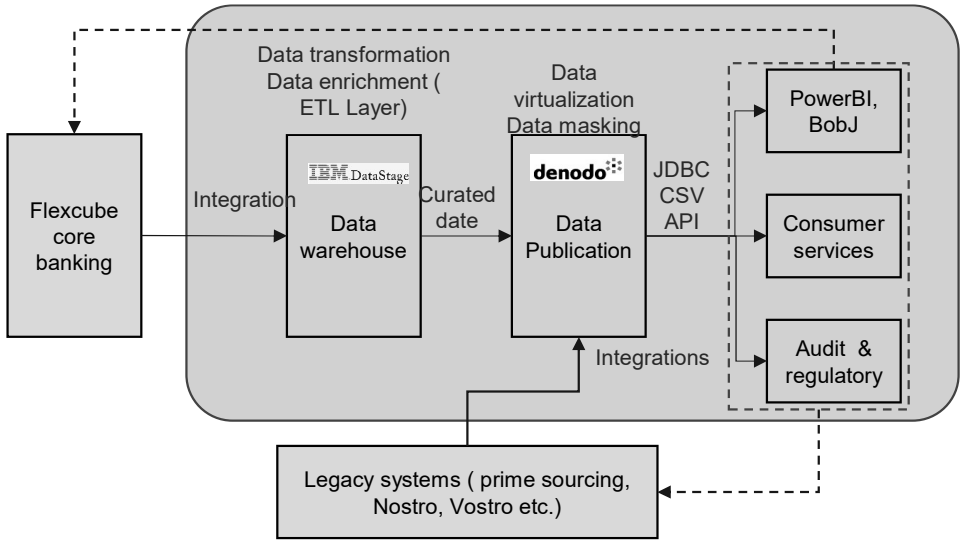

Key challenges with current systems

- Heavy dependency on Oracle for any change implementation
- High cost of Change due to vendor lock-in
- High MTTR due to vendor lock-in
- High Turn around time to create new reports and Views
- Legacy and Inadequate data security controls

Business vision

- Effective management of client portfolio with more in-depth insights
- Setting up foundation for next gen digital transformation
- Attract new Generation customer
- Quick rollout of product and services
- Fully integrated corporate client

KPMG Solution

Value Delivered

- ✓ Reports TAT reduced by **80%** with **90%** reports generated within 5 minutes
- ✓ SLA Creation of new views within **4-6 hours**
- ✓ Up to **40% reduction** in new report generation cost
- ✓ Ability to share **curated and secured** data to internal and external stakeholders
- ✓ Availability of **real time data** and T-1 data to the data consumers

Project specifics

- Project duration – 24 months
- Peak team size – 25 (KI). 10 (KC)

Architect implement and roll-out modern data platform | Program & change Mgmt | Functional & technical configuration | Data visualization, Automation and reporting | Managed services

Our Solutions & Accelerators:

KPMG's Gen AI Platform

KPMG's Gen AI Platform uses Gen AI to its full potential to optimise multiple areas and KPIs across an organisation. It can be used to build GenAI apps, manage Enterprise knowledge bases, acts as a marketplace for GenAI apps, provides a playground and workshop to experiment new use-cases, and monitor cost, latency and accuracy.

KPMG AI Studio

KPMG AI Studio is an AI driven predictive and prescriptive analytics platform to generate rapid business results by empowering an organization to build, deploy, use and maintain transparent Machine Learning Models with fair share of responsibility.

Build

Automated Machine Learning development process coupled:
- KPMG Feature Factory with 1000+ features
- 25+ Prebuilt ML Models
- 20+ Evaluation Techniques

Operate

Single click model deployment in intra-cloud as well as on-prem
Enables to deploy models built using AI-Studio and outside the AI Studio Platform

Maintain

Track change in the statistical property and performance by both **Data Monitoring** & **Model Performance Monitoring** (Model performance over time)

Administrate

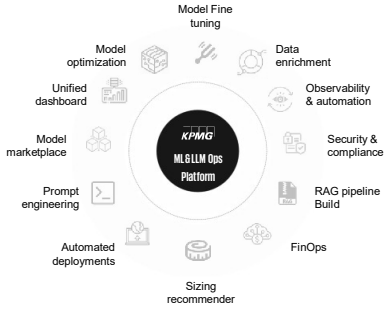

Single click view of current **AI Maturity and ML Model Health**
Enables Leaders to track ML models built, deployed, actively in use etc. and track model health

Govern

Fairness & Inclusiveness | Explainability | Transparency | Reproducibility | Data Governance

KPMG Unified ML & LLM Ops Platform

KPMG's unified ML and LLM Ops Platform is a cloud-agnostic, AI-driven predictive and prescriptive analytics platform, built using open-source technologies, to generate rapid business results by empowering clients to build, deploy, use and maintain transparent Machine Learning Models with fair share of responsibility.

Our Gen AI Solutions for improving efficiency, Customer Experience & Generate ROI

K'RAFT AI

AI-driven accelerator for smart campaigns, personalization, and revenue-focused digital experiences.

Analytics AI

AI-powered analytics to generate smart insights, reports, and decision-ready recommendations.

Service Lite
Agentic AI for Incident Management

Agentic AI solution to monitor, detect, and intelligently manage incidents with minimal manual intervention.

Page Insights / Dashboard

In-page widget providing real-time performance, traffic, and SEO insights without analytics dependency.

NLP Contextual Auto Search

Context-aware search powered by NLP to improve discovery using user intent and semantic understanding.

Gen AI to Generate Content

AI-based content generation embedded in AEM components to create SEO-friendly, contextual content at scale.

Multilingual Content Generation

Gen AI–led framework to auto-create and manage multilingual content, reducing authoring time significantly.

Fast-Track Development

AI-enabled development acceleration using Figma-to-code conversion and Copilot-driven coding assistance.

Content Crawler

AI crawler to detect outdated or incorrect content and proactively alert business teams.

Cache Warmup

AI-driven cache pre-warming to improve page load performance and prevent cold cache impact.

KPMG Process Automation Using AI

AI-enabled automation for BRD creation, Jira workflows, and end-to-end delivery efficiency.

Key Performance Indicators (KPI) – ITSM Managed Services*

KPI Category	KPI Name	Definition	Target	Measurement Frequency
Service Availability	Platform Uptime	Availability of ITSM automation platform	>= 99.9%	Monthly
Incident Management	MTTR Reduction	Reduction in mean time to resolve incidents	>= 40% QoQ	Quarterly
Incident Management	P1 SLA Adherence	% of P1 incidents resolved within SLA	100%	Monthly
Automation Efficiency	Auto-Triage Coverage	Incidents auto-classified & routed by AI	>= 85%	Monthly
Quality & Stability	Incident Recurrence Rate	Repeat incidents for same root cause	< 5%	Quarterly
Customer Experience	NPS Impact Correlation	Incidents correlated to NPS drop	Actionable RCA	Quarterly
Governance	RCA Submission Timeliness	RCAs submitted within defined SLA	100%	Monthly

*KPI – To be discussed and finalized at the time of contracting

KPI Measurement – Methodology & Data Sources*

KPI	Measurement Pointers	Data Source / Tool	Review Frequency
Platform Uptime	Exclude planned maintenance; calculate uptime vs outage minutes	Monitoring tools / ServiceNow	Monthly
MTTR Reduction	Compare Baseline MTTR vs current quarter average	ServiceNow analytics	Quarterly
P1 SLA Adherence	Count P1 incidents resolved within SLA window	ServiceNow incident data	Monthly
Auto-Triage Coverage	% incidents auto-classified without manual override	AIOps / ServiceNow	Monthly
Incident Recurrence Rate	Repeat incidents linked to same RCA	Problem records / KEDB	Quarterly
NPS Correlation	Map incidents during NPS drop periods	NPS reports + incidents	Quarterly
RCA Timeliness	RCA submitted within defined SLA timelines	ServiceNow RCA workflow	Monthly

*KPI – To be discussed and finalized at the time of contracting

KPI – SLA Traceability Matrix*

KPI	Mapped SLA	SLA Target	Business Outcome
Platform Uptime	Availability SLA	>= 99.9%	High system availability
MTTR Reduction	Resolution Time SLA	>= 40% QoQ improvement	Faster incident resolution
P1 SLA Adherence	High Priority Support SLA	100% within 2 hrs	Business continuity
Auto-Triage Coverage	Performance SLA	<= 2 sec classification	Operational efficiency
Incident Recurrence Rate	Problem Management SLA	< 5% repeats	Stability & risk reduction
NPS Correlation	CX / Stability SLA	Actionable RCA	Improved customer experience
RCA Timeliness	RCA Submission SLA	100% within SLA	Governance & transparency

*KPI – To be discussed and finalized at the time of contracting
