Functional Detailed Requirements

1. Enterprise Analytics Data Collection

1.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
1.1.1. Ability to capture customer interaction events across Web, Mobile Applications (Android and iOS), backend services, APIs, kiosks, chatbots, and future digital channels.	C	
1.1.2. Ability to support SDK-based, API-based, server-side, client-side, and hybrid event collection mechanisms.	C	
1.1.3. Ability to capture page views, screen views, clicks, searches, bookings, payment events, ancillary purchases, cancellations, refunds, modifications, check-in activities, and servicing events.	C	
1.1.4. Ability to capture custom business events without requiring significant engineering effort.	C	
1.1.5. Ability to define custom event parameters, custom dimensions, calculated metrics, and event attributes.	C	
1.1.6. Ability to capture customer identifiers, session identifiers, device identifiers, campaign identifiers, booking identifiers, and transaction identifiers.	C	
1.1.7. Ability to support offline event collection with automatic synchronization once connectivity is restored.	C	
1.1.8. Ability to validate events before ingestion to prevent duplicate, malformed, or incomplete analytics records.	C	
1.1.9. Ability to support high-volume event ingestion while maintaining low latency during peak booking periods.	C	

1.2 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
1.2.1. Event tracking implementation across IndiGo Website and Mobile Applications.	C	
1.2.2. Collection of booking funnel events from Search through Booking Confirmation.	C	
1.2.3. Offline event synchronization during intermittent network connectivity.	C	
1.2.4. Event validation and quality monitoring dashboard.	C	
1.2.5. Real-time ingestion of customer interaction events.	C	
1.2.6. Custom business event creation without application code changes.	C	

Provide

Maximum events processed per second.

Mixpanel Response: Mixpanel's infrastructure has processed a peak of 2 million events/second, with the platform ingesting over 1 trillion events per month across customers.

Maximum daily event volume supported.

Mixpanel Response: At platform scale, Mixpanel ingests 30+ billion events per day (1T+/month); the Import API is built to handle billions of events per day per customer.

Average event ingestion latency.

Mixpanel Response: Events are typically available for querying within seconds of hitting Mixpanel's ingestion servers (near real-time).

Supported SDKs and APIs.

Mixpanel Response: Native SDKs for JavaScript, iOS (Swift/Objective-C), Android (Kotlin/Java), React Native, Flutter, Unity, Python, Node.js, Java, Go, Ruby, and PHP, plus HTTP Ingestion/Import/Export APIs and connectors for Segment, mParticle, RudderStack, and Fivetran.

Offline synchronization capabilities.

Mixpanel Response: Mobile SDKs queue events locally on-device while offline and auto-flush/sync once connectivity returns, with configurable batching and queue-size limits.

Event validation mechanisms.

mixpanel

Mixpanel Response: Lexicon centrally governs event/property schemas, and the Data Standards module automatically flags events that violate naming or metadata rules before they reach analysis.

Largest enterprise implementation.

Mixpanel Response: Mixpanel supports enterprise customers operating at internet scale, including some of the world's largest digital businesses. The platform has processed an average of 8.2 billion events per day for a single customer, with hourly peak volumes of approximately 2.5 billion events and daily ingestion peaks of approximately 25 billion events. Customer identities are confidential and can be shared only where permitted under applicable confidentiality obligations.

Airline references using similar event collection architecture.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). These implementations leverage event-based analytics across digital customer journeys, including web and mobile applications, to analyse customer behaviour, optimise booking experiences, and improve digital performance. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

2. Event Taxonomy & Data Governance

2.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
2.1.1. Ability to define standardized enterprise event taxonomy.	C	
2.1.2. Ability to maintain event naming conventions across all digital channels.	C	
2.1.3. Ability to define reusable event schemas.	C	
2.1.4. Ability to manage metadata associated with events, dimensions, and metrics.	C	
2.1.5. Ability to maintain version history of analytics events.	C	
2.1.6. Ability to validate event payloads before publishing.	C	

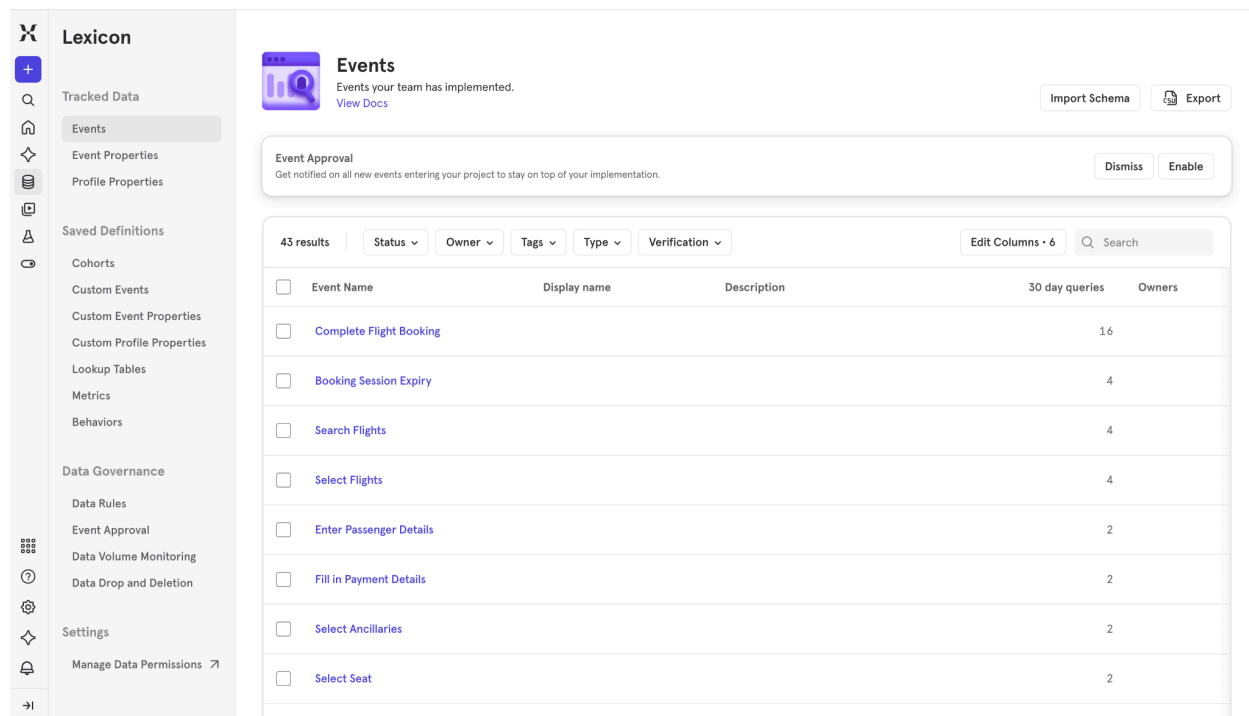

2.2 Use Case Demonstration

Requirement	Mixpanel	Mixpanel Note
-------------	----------	---------------

	Response	
2.2.1. Creation of enterprise event taxonomy.	C	
2.2.2. Event approval workflow.	C	
2.2.3. Identification of duplicate events.	C	
2.2.4. Event validation before production deployment.	C	

Mixpanel Lexicon automatically generates an enterprise event taxonomy that identifies duplicate events. Lexicon allows you to enable an event approval workflow.

We recommend using the Mixpanel Events page for validation before production deployment.

Creation of enterprise event taxonomy

Data Actions

Event Approval

Maintain data quality by monitoring and approving newly tracked events. New events will stay **pending** and **hidden** until they are set to **visible** in Lexicon. Project Owners and Admins can review and approve events. Notify your team or slack channels about newly tracked events.

Automate Event Approval with Data Standards

Save time by auto-approving events that meet your data standards. Events that meet your data standards will automatically become **visible** and usable for your team. Events that do not comply will remain **pending** and **hidden** until fixed.

Property Notification

Get notified when new properties appear on new or existing events.

☐ Notify Teammates

Notify specific teammates about new data

No recipients

☐ Notify a Slack Channel

Notify a Slack channel about new data

No slack channels

Event validation before production deployment.

Provide
Maximum supported events.

mixpanel

Mixpanel Response: No hard limit of number of distinct event names per project. We will confirm the exact number from IndiGo team in the presentation.

Metadata capabilities.

Mixpanel Response: Mixpanel Lexicon provides event taxonomy and data governance. It stores display name, description, tags, owner/team contacts, and visibility flags (hidden/dropped) for every event and property. Metadata can be managed via the UI, CSV export/import, or the Lexicon Schemas API.

Event governance framework.

Mixpanel Response: Lexicon and Mixpanel Data Standards enforce naming/metadata rules and flag non-compliant events, Event Approval gates newly ingested events from going live until reviewed, and role-based access control governs who can make schema changes.

Event quality monitoring reports.

Mixpanel Response: Mixpanel Data Rules can be created to alert on unexpected event quality. Mixpanel Data Volume Monitoring. watches for sudden volume changes across the project and notifies admins

Enterprise customer references.

Mixpanel Response: Representative enterprise customers include Swiggy, Nykaa, CRED, BharatPe, TFE Hotels, and another leading Indian digital streaming platform. Additional enterprise customer references are available subject to customer approval and applicable confidentiality obligations.

3. Customer Identity Resolution & Unified Customer Profiles

3.1 Capability Requirements

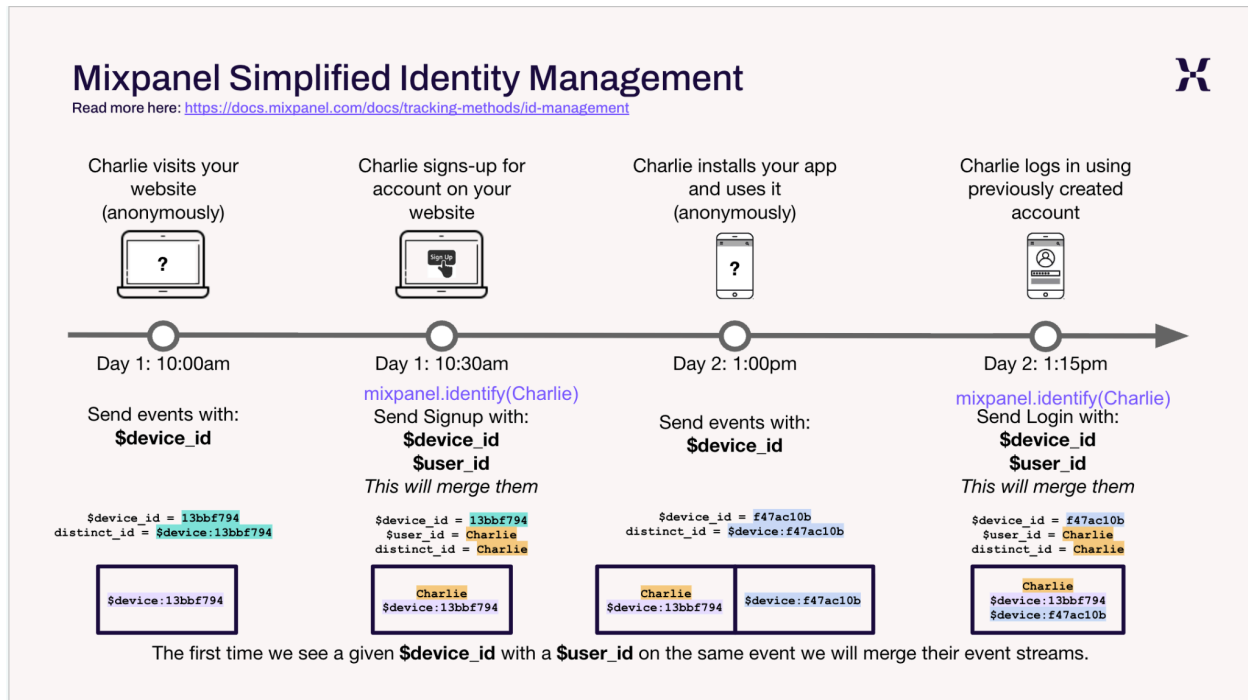

Requirement	Mixpanel Response	Mixpanel Note
3.1.1. Ability to identify anonymous visitors.	C	
3.1.2. Ability to merge anonymous users into authenticated customer profiles	C	
3.1.3. Ability to stitch customer journeys across multiple devices.	C	
3.1.4. Ability to support identity resolution using login IDs, loyalty numbers, booking references, customer IDs, cookies, mobile identifiers, and enterprise identity providers.	C	
3.1.5. Ability to create persistent customer profiles.	C	

3.1.6. Ability to support household and family relationships where applicable.	C	Mixpanel group analytics
3.1.7. Ability to combine behavioural, transactional, operational, demographic, and loyalty information.	C	
3.1.8. Ability to support profile enrichment using enterprise systems.	C	Mixpanel warehouse connectors
3.1.9. Ability to maintain customer profile history.	C	
3.1.10. Ability to support first-party identity management strategies.	C	
3.1.11. Ability to maintain customer profile audit history.	C	

3.2 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
3.2.1. Anonymous customer becoming an authenticated customer.	C	
3.2.2. Cross-device identity stitching.	C	
3.2.3. Customer profile enrichment from CRM.	C	
3.2.4. Unified customer journey.	C	
3.2.5. Loyalty profile integration.	C	
3.2.6. Customer profile updates in real time.	C	
3.2.7. Customer profile activation into marketing platforms.	C	

We recommend using Mixpanel Simplified ID merge in order to stitch anonymous to authenticated events. Customer profiles can be enriched from CRM and other systems through API: <https://docs.mixpanel.com/reference/profile-set>

Provide

Identity resolution methodology.

Mixpanel Response: Mixpanel's Simplified ID Merge links a device/anonymous ID to an authenticated user ID via \$identify, retroactively joining the full event history into one profile.

Maximum supported profile attributes.

Mixpanel Response: Up to 2,000 properties per user profile

Identity graph capabilities.

Mixpanel Response: Mixpanel resolves identity natively through distinct_id + device ID + ID Merge (unifying anonymous and authenticated activity into one profile).

Customer profile update latency.

Mixpanel Response: Profile property updates (\$set) apply immediately and typically appear in the UI within about a minute

Airline customer deployments.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Largest customer profile implementation.

Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

4. Customer Journey Analytics

4.1 Capability Requirements

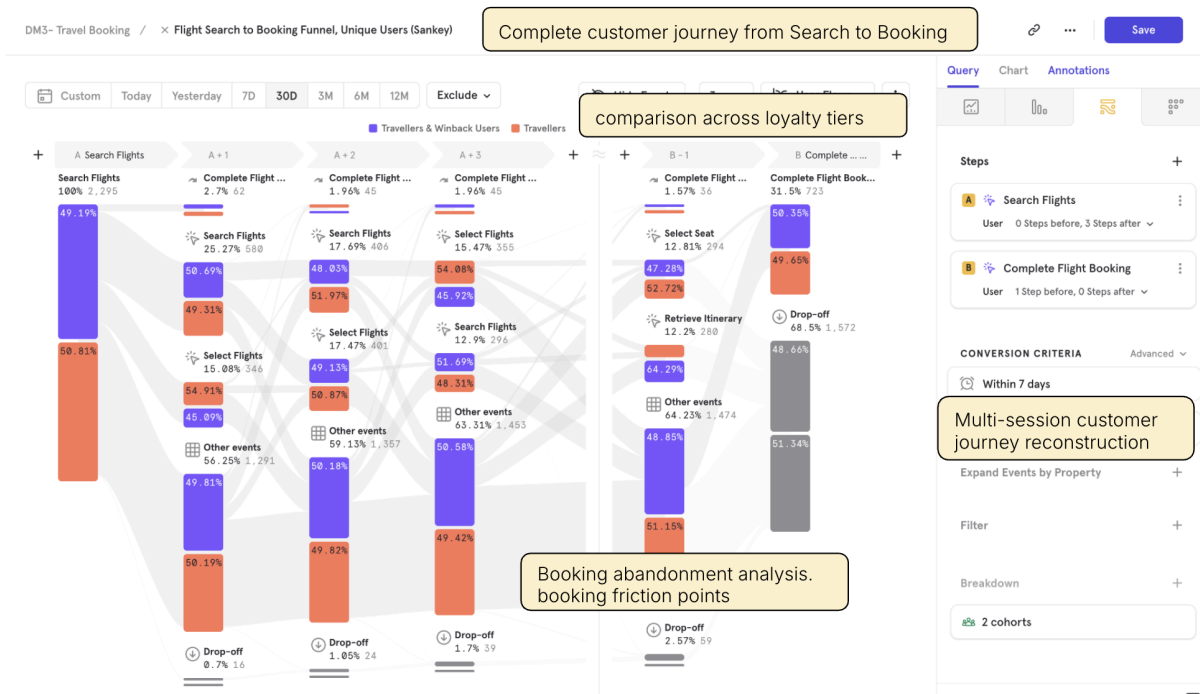

Requirement	Mixpanel Response	Mixpanel Note
4.1.1. Ability to visualize end-to-end customer journeys across Web, Mobile Applications, APIs, Contact Centre, Loyalty Platform, Marketing Platforms, and future channels.	C	
4.1.2. Ability to analyse customer movement across booking, servicing, check-in, ancillary purchase, loyalty, and post-travel journeys.	C	
4.1.3. Ability to automatically identify journey drop-off points.	C	
4.1.4. Ability to compare customer journeys across different traveller segments.	C	
4.1.5. Ability to analyse conversion paths and customer behaviour across multiple sessions.	C	
4.1.6. Ability to identify friction points affecting booking conversion.	C	
4.1.7. Ability to support multi-session journey reconstruction.	C	
4.1.8. Ability to compare successful versus unsuccessful customer journeys.	C	
4.1.9. Ability to analyse customer behaviour before cancellations, payment failures, booking abandonment, and ancillary purchases.	C	
4.1.10. Ability to correlate customer journeys with operational events including flight delays, disruptions, fare changes, and schedule modifications.	C	
4.1.11. Ability to analyse journey performance across channels, geographies, devices, campaigns, and loyalty tiers.	C	

4.1.12. Ability to support journey segmentation using behavioural, transactional, and operational attributes.	C	
4.1.13. Ability to provide AI-assisted journey insights and optimization recommendations.	C	

4.2 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
4.2.1. Complete customer journey from Search to Booking.	C	
4.2.2. Cross-device customer journey visualization.	C	
4.2.3. Booking abandonment analysis.	C	
4.2.4. Multi-session customer journey reconstruction.	C	
4.2.5. Customer journey comparison across loyalty tiers.	C	
4.2.6. Identification of booking friction points.	C	
4.2.7. Journey analysis during operational disruptions (IROPS).	C	
4.2.8. Executive customer journey dashboard.	C	

Mixpanel Flows report can be used for customer journey analytics. Please see below for an example screenshot

Provide

Maximum supported journey length.

Mixpanel Response: No fixed cap on step count — Flows lets you configure steps before/after any event and Top Paths surfaces the 50 most common sequences up to your selected step count.

Journey reconstruction capabilities.

Mixpanel Response: Flows reconstructs the sequence of events a user took before/after any selected event, stitched across sessions and devices via ID Merge, with filters to isolate specific segments or paths.

Journey visualization methodology.

Mixpanel Response: User Flows view use nodes to represent events and trace user behaviour between steps.

AI-assisted journey analysis features.

Mixpanel Response: Mixpanel Agent lets users create user journey reports as well as ask journey and funnel questions in plain language and iterate with follow-up prompts, without writing queries

Journey analytics latency.

Mixpanel Response: Same near real-time as event ingestion.

Airline deployment references.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (logo reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Largest production journey analytics implementation.

Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

5. Product Analytics

5.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
5.1.1. Ability to measure feature adoption, customer engagement, and product usage across Web, Mobile Applications, and future digital channels.	C	
5.1.2. Ability to analyse customer interaction with every product feature throughout the customer lifecycle.	C	
5.1.3. Ability to measure customer retention, repeat usage, stickiness, and engagement trends.	C	
5.1.4. Ability to identify frequently used, underutilized, and abandoned product features.	C	
5.1.5. Ability to measure customer engagement across booking, servicing, loyalty, ancillary, and post-booking journeys.	C	
5.1.6. Ability to analyse user behaviour across multiple application versions and releases.	C	
5.1.7. Ability to compare product adoption across customer cohorts, geographies, devices, operating systems, and application versions.	C	
5.1.8. Ability to measure customer engagement with newly launched features.	C	

5.1.9. Ability to analyse feature discovery, feature completion, and feature abandonment.	C	
5.1.10. Ability to monitor feature health using configurable KPIs.	C	
5.1.11. Ability to create custom product health scorecards.	C	
5.1.12. Ability to identify behavioural patterns leading to successful booking completion.	C	
5.1.13. Ability to analyse user flows across different customer personas.	C	
5.1.14. Ability to measure customer lifetime engagement across all owned digital channels.	C	
5.1.15. Ability to support event-based, user-based, and account-based analytics.	C	
5.1.16. Ability to support airline-specific product analytics including Search, Fare Calendar, Flight Selection, Add-ons, Seat Selection, Payment, Check-in, Boarding Pass, Flight Status, Loyalty, and Customer Support.	C	

5.2 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
5.2.1. Demonstrate feature adoption analysis for newly launched booking functionality.	C	
5.2.2. Demonstrate customer engagement analysis for Check-in journey.	C	
5.2.3. Demonstrate retention analysis for repeat travellers.	C	

5.2.4. Demonstrate comparison of engagement across Android, iOS, and Web.	C	
5.2.5. Demonstrate analysis of newly introduced ancillary products.	C	
5.2.6. Demonstrate identification of low-performing product features.	C	
5.2.7. Demonstrate customer engagement trends after application release.	C	
5.2.8. Demonstrate executive product health dashboard.	C	

Mixpanel has several types of reports: Insights, Funnels, Flows, Retention and other advanced reports, each with their specialized use. Mixpanel has been built from ground up for self service analytics. We will share more with IndiGo team in the presentation.

Provide

Maximum events supported per customer.

Mixpanel Response: No fixed ceiling — the platform (and Import API specifically) is built to handle billions of events per day per customer; volume scales with your contracted plan rather than hitting a hard cap.

Maximum customer profiles supported.

Mixpanel Response: No fixed cap on the number of distinct user profiles per project

Largest enterprise deployment.

Mixpanel Response: Same scale point as raised earlier — ~20,000 customers worldwide (14% of the Fortune 500), ~7 trillion data points/year platform-wide

Product analytics latency.

Mixpanel Response: Near real-time ingestion. Analytics reports are typically queryable within seconds of ingestion

Customer retention analysis capabilities.

Mixpanel Response: Native Retention report supports both N-day (returns on exactly day N) and Unbounded/rolling (returns on day N or later) retention, calendar or rolling interval modes, and breakdowns by any user property or cohort, with retention curves embeddable directly on dashboards

Airline customer references.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking

conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Typical product adoption improvement achieved.

Mixpanel Response: Product adoption improvements vary based on the customer's use case, implementation maturity, and optimisation programme. Representative customer outcomes include Air Premia, which achieved more than 20% improvement in direct booking conversion through behavioural analytics and UX optimisation, and Nykaa, which successfully migrated from Adobe Analytics to Mixpanel, enabling self-service analytics, improved analyst productivity, and deeper customer behavioural insights.

Supported visualization capabilities.

Mixpanel Response: Insights (line, stacked line, bar, stacked bar, pie, table, metric), Funnels, Retention curves, Flows (Sankey + Top Paths), Session Replays and Heatmaps. Boards are combinable with text/context cards on shared dashboards.

6. Booking Funnel Analytics & Conversion Optimization

6.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
6.1.1. Ability to analyse complete booking funnels from Search through Booking Confirmation.	C	
6.1.2. Ability to identify customer abandonment across every booking stage.	C	
6.1.3. Ability to analyse conversion across Search, Flight Selection, Passenger Details, Ancillary Selection, Seat Selection, Payment, Confirmation, and Check-in.	C	
6.1.4. Ability to identify friction points reducing booking completion.	C	
6.1.5. Ability to analyse payment success and failure patterns.	C	
6.1.6. Ability to compare funnel performance across channels, devices, customer types, and markets.	C	
6.1.7. Ability to identify high-converting customer journeys.	C	

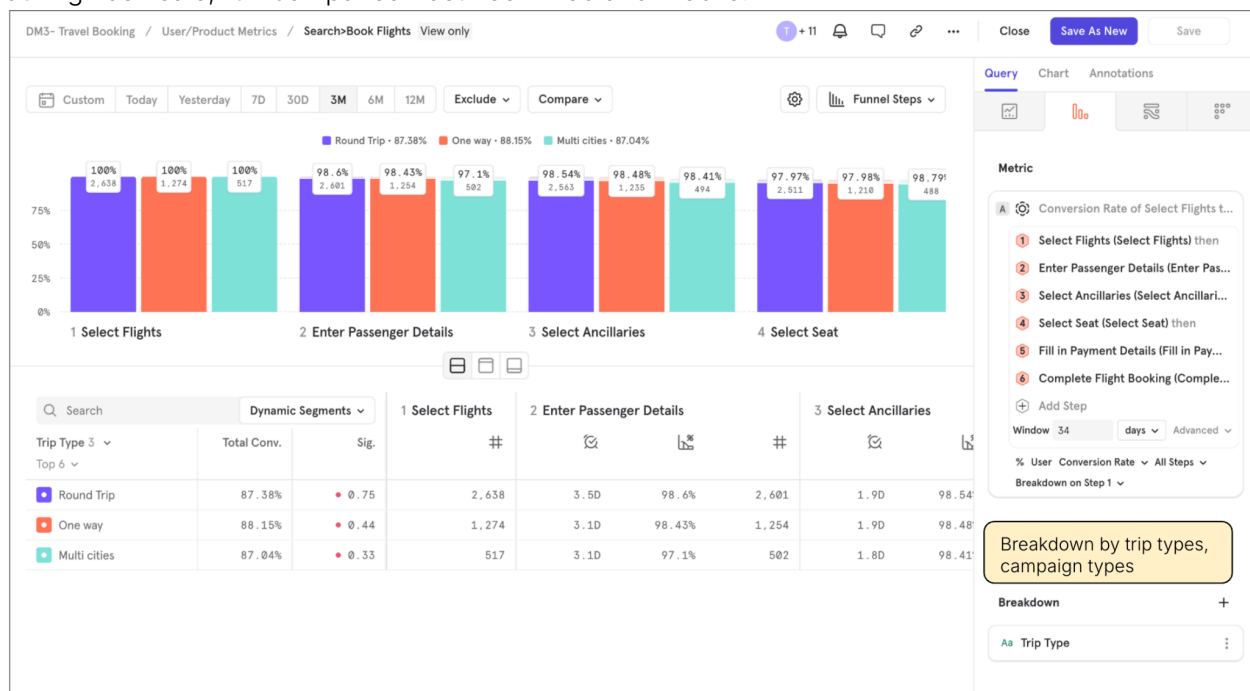

6.1.8. Ability to analyse impact of fare changes on booking behaviour.	C	
6.1.9. Ability to monitor ancillary attachment rates.	C	
6.1.10. Ability to measure booking completion time.	C	
6.1.11. Ability to analyse coupon redemption behaviour.	C	
6.1.12. Ability to measure impact of promotional campaigns on booking conversion.	C	
6.1.13. Ability to compare booking funnels across domestic and international routes.	C	
6.1.14. Ability to analyse repeat booking behaviour.	C	
6.1.15. Ability to support real-time booking funnel monitoring.	C	
6.1.16. Ability to identify abnormal funnel behaviour during sales, disruptions (IROPS), and promotional events.	C	
6.1.17. Ability to monitor conversion impact after product releases.	C	
6.1.18. Ability to integrate booking analytics with experimentation and personalization platforms.	C	

6.2 Use Case Demonstration

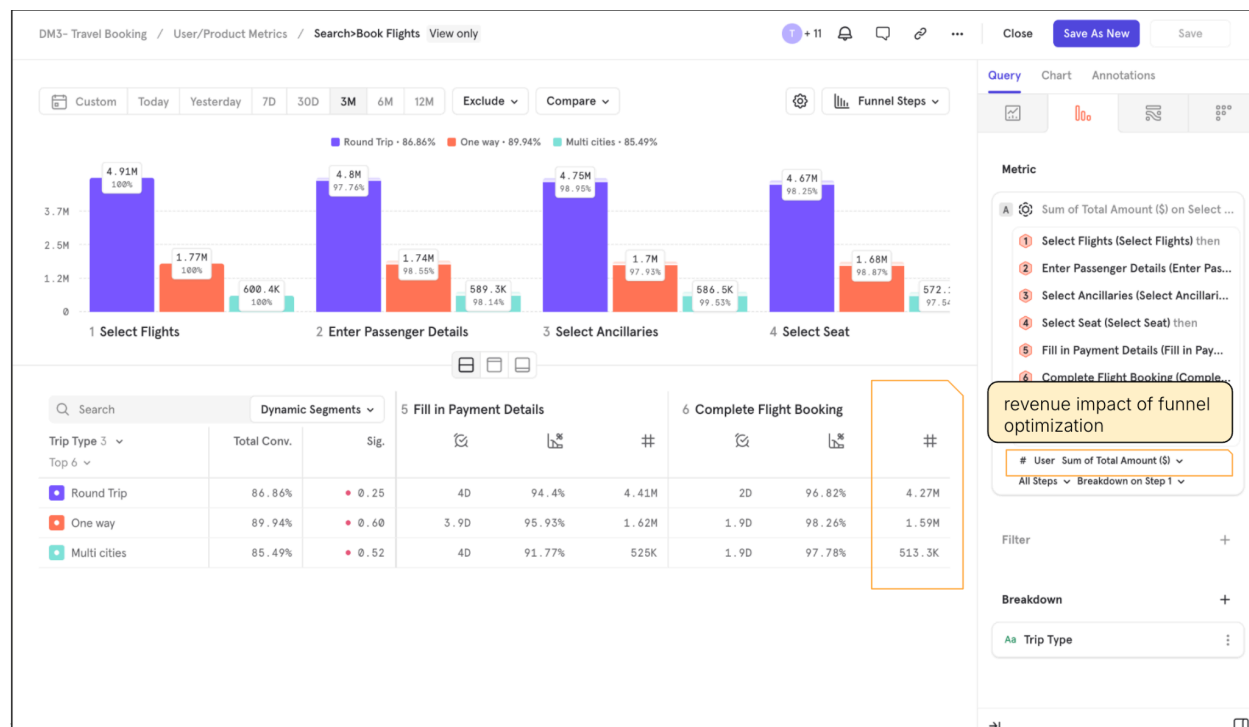

Requirement	Mixpanel Response	Mixpanel Note
6.2.1. Demonstrate complete Search-to-Booking funnel.	C	
6.2.2. Demonstrate analysis of Flight Selection abandonment.	C	

6.2.3. Demonstrate Payment failure analysis.	C	
6.2.4. Demonstrate ancillary attachment optimization.	C	
6.2.5. Demonstrate conversion comparison between Web and Mobile.	C	
6.2.6. Demonstrate domestic versus international booking funnel analysis.	C	
6.2.7. Demonstrate booking funnel during flash sale.	C	
6.2.8. Demonstrate revenue impact of funnel optimization.	C	

Mixpanel Funnel allows you to compare domestic versus international booking, booking funnel during flash sale, run comparison between Web and Mobile.

Mixpanel Funnel allows you to run revenue related analysis, so you can understand revenue impact of funnel optimization.

Provide

Maximum funnel depth supported.

Mixpanel Response: No hard cap on step count, we can discuss typical depth of IndiGo funnels.

Maximum concurrent funnel analysis.

Mixpanel Response: There are no concurrency limits on Interactive funnel use.

Real-time funnel processing latency.

Mixpanel Response: Same near real-time pipeline as core ingestion — funnel data is typically queryable within seconds of the underlying events landing

Largest booking volume analysed.

Mixpanel Response: While customer-specific booking volumes are confidential, Mixpanel supports enterprise customers operating at internet scale. The platform has processed an average of 8.2 billion events per day for a single customer, with hourly peak volumes of approximately 2.5 billion events and daily ingestion peaks of approximately 25 billion events, demonstrating its ability to support large-scale booking and transaction analytics.

Typical conversion uplift achieved.

Mixpanel Response:

- Air Premia: Achieved more than 20% improvement in direct booking conversion by using behavioural analytics to optimise the digital booking experience.
- Nykaa: Successfully migrated from Adobe Analytics to Mixpanel over a six-month implementation while handling billions of monthly events. The migration enabled analytics self-service, reduced warehouse query costs, improved analyst productivity (saving more than 15% of analyst time), and uncovered new customer lifetime value insights through behavioural analytics.

Airline references.

mixpanel

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Supported visualization capabilities.

Mixpanel Response: Step-by-step conversion funnel chart, Time-to-Convert analysis (median, average, P25/P75/P90/P99, min/max) as bar, line, or metric views, and per-step property breakdowns — combinable with Insights and Retention on shared dashboards.

Funnel benchmarking capabilities.

Mixpanel Response: Mixpanel publishes an annual Benchmarks Report (2026 edition draws on ~7,700 customers and 11.7 trillion events) letting customers input their own signup/value-moment events to compare growth, retention, and engagement against industry peers (current verticals include retail/e-commerce, media, financial services).

7. Marketing Analytics & Attribution

7.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
7.1.1. Ability to measure marketing campaign performance across paid, owned, and earned channels.	C	
7.1.2. Ability to support first-touch, last-touch, linear, position-based, time-decay, and custom attribution models.	C	
7.1.3. Ability to analyse acquisition channels including Search, Social Media, Display, Email, Push Notifications, SMS, Affiliate, Referral, and Direct traffic.	C	
7.1.4. Ability to measure Return on Advertising Spend (ROAS).	C	
7.1.5. Ability to measure Customer Acquisition Cost (CAC).	C	
7.1.6. Ability to analyse Customer Lifetime Value (CLV).	C	
7.1.7. Ability to attribute bookings, ancillary purchases, and loyalty enrolments to marketing campaigns.	C	

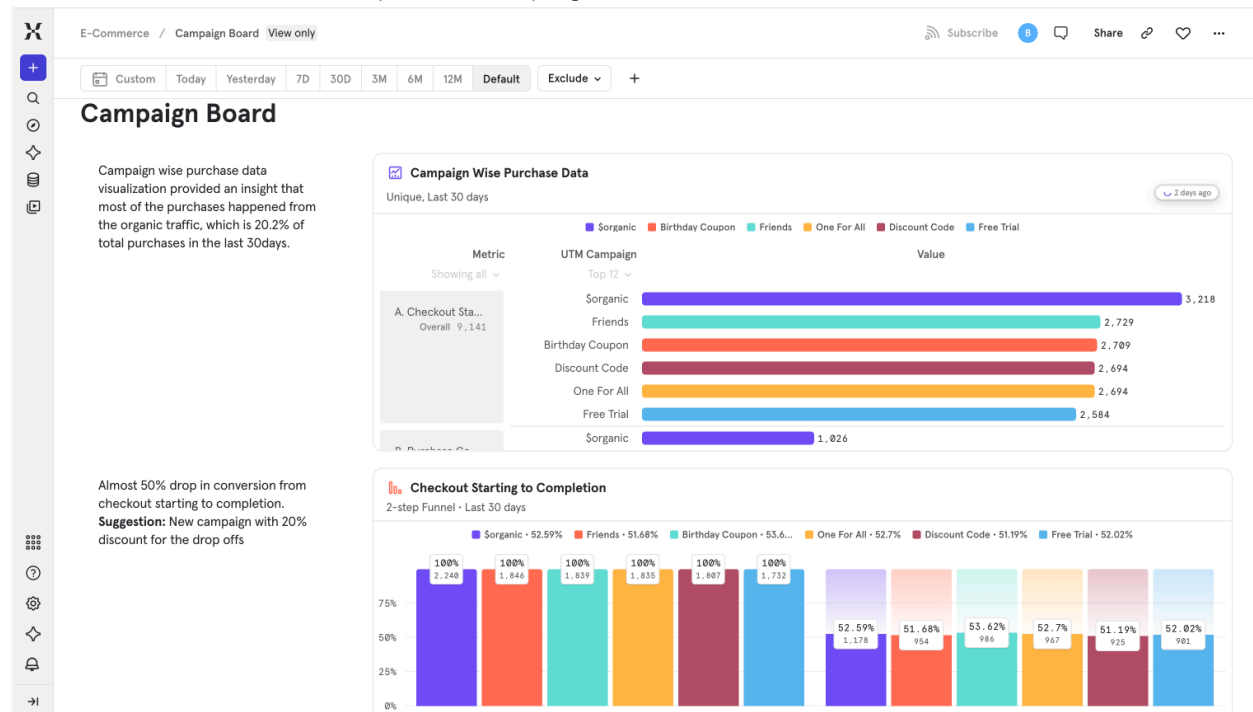

7.1.8. Ability to analyse campaign performance across customer segments.	C	
7.1.9. Ability to identify high-performing marketing channels.	C	
7.1.10. Ability to support UTM governance and campaign taxonomy.	C	
7.1.11. Ability to integrate with enterprise marketing platforms.	C	
7.1.12. Ability to support cross-device attribution.	C	
7.1.13. Ability to measure incremental business impact of campaigns.	C	
7.1.14. Ability to analyse campaign frequency and customer fatigue.	C	
7.1.15. Ability to provide real-time campaign performance dashboards.	C	
7.1.16. Ability to support airline-specific marketing analytics including fare sales, seasonal campaigns, destination promotions, loyalty campaigns, and ancillary promotions.	C	

7.2 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
7.2.1. Demonstrate attribution of bookings across multiple marketing channels.	C	
7.2.2. Demonstrate campaign ROI dashboard.	C	
7.2.3. Demonstrate customer acquisition analysis.	C	
7.2.4. Demonstrate cross-device attribution.	C	

7.2.5. Demonstrate airline promotional campaign measurement.	C	
7.2.6. Demonstrate ancillary campaign effectiveness.	C	
7.2.7. Demonstrate loyalty campaign performance.	C	
7.2.8. Demonstrate executive marketing performance dashboard.	C	

Mixpanel integrates with MMPs like Appsflyer, Branch and Adjust to receive install campaign information on mobile apps. For web traffic, Mixpanel automatically reads UTM parameters. Please see below for an example of a campaign board, which can be customised to IndiGo needs.

Provide

Supported attribution models.

Mixpanel Response: Single-touch (first-touch, last-touch — last-touch with a 30-day lookback is the default) and multi-touch models (linear, U-shaped, time-decay, and custom weighting), all configurable via UTM parameters tracked as event properties.

Maximum campaign volume supported.

Mixpanel Response: No fixed cap, campaigns can be ingested and tracked as events.

Marketing data latency.

Mixpanel Response: Same near real-time pipeline as core ingestion.

Enterprise integrations supported.

Mixpanel Response: Native integrations include Google Ads, Facebook Ads, Braze, Salesforce Marketing Cloud. Please refer to <https://mixpanel.com/partners/integrations> for more information.

Largest deployment.

Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

Airline customer references.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Marketing ROI case studies.

Mixpanel Response:

- Air Premia: Achieved more than 20% improvement in direct booking conversion by using behavioural analytics to optimise the digital booking experience.
- Nykaa: Successfully migrated from Adobe Analytics to Mixpanel over a six-month implementation while handling billions of monthly events. The migration enabled analytics self-service, reduced warehouse query costs, improved analyst productivity (saving more than 15% of analyst time), and uncovered new customer lifetime value insights through behavioural analytics.

Cross-channel reporting capabilities.

Mixpanel Response: Unified dashboards combine campaign performance across channels (paid, owned, earned) using UTM source/medium/campaign breakdowns, with cross-device attribution via ID Merge and Funnels/Retention combinable alongside campaign data on the same dashboard.

8. Audience Management & Customer Segmentation

8.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
8.1.1. Ability to create customer audiences using behavioural, transactional, demographic, operational, loyalty, campaign, and engagement attributes.	C	
8.1.2. Ability to create audiences using historical, real-time, and streaming customer data.	C	

8.1.3. Ability to build rule-based, AI-assisted, and predictive customer segments.	PC	On Mixpanel roadmap
8.1.4. Ability to create audiences based on booking behaviour, travel frequency, customer lifetime value, ancillary purchases, route preferences, fare family selection, payment preferences, loyalty tier, and engagement history.	C	
8.1.5. Ability to identify anonymous, authenticated, loyalty, corporate, and partner customers.	C	
8.1.6. Ability to perform identity stitching across multiple devices and channels.	C	
8.1.7. Ability to create dynamic audiences that automatically update as customer behaviour changes.	C	
8.1.8. Ability to support nested audience logic using AND, OR, and NOT operators.	C	
8.1.9. Ability to create look-alike audiences using machine learning.	PC	On Mixpanel roadmap
8.1.10. Ability to support audience suppression and exclusion rules.	C	
8.1.11. Ability to create airline-specific operational audiences, including: Frequent domestic travellers Frequent international travellers Business travellers Family travellers Leisure travellers Students Senior citizens High ancillary purchasers High-value customers At-risk customers Customers impacted by IROPS Customers eligible for loyalty enrolment	C	

8.1.12. Ability to activate audiences across marketing automation, personalization, experimentation, CRM, CDP, advertising, and customer engagement platforms.	C	
8.1.13. Ability to maintain complete audit history of audience creation, modification, activation, and deletion.	C	
8.1.14. Ability to provide audience overlap analysis and estimated audience size before activation.	C	

8.2 Use Case Demonstration

Demonstrate the following capabilities:

Requirement	Mixpanel Response	Mixpanel Note
8.2.1. Creation of business traveller and leisure traveller segments.	C	
8.2.2. Dynamic audience creation based on recent booking behaviour.	C	
8.2.3. Creation of high-value customer audiences.	C	
8.2.4. Real-time qualification of customers during an active booking session.	NC	Mixpanel cohorts can refresh in real time, but targeting is on 15min interval
8.2.5. Identity stitching across Web and Mobile Applications.	C	
8.2.6. Activation of audiences for personalization campaigns.	C	
8.2.7. Creation of predictive churn audiences.	PC	On Mixpanel Roadmap
8.2.8. Audience suppression for recently booked customers.	C	

8.2.9. Airline-specific audience creation for passengers travelling during peak holiday periods.	C	
8.2.10. AI-assisted recommendation of new audience opportunities.	PC	On Mixpanel Roadmap

Mixpanel Cohorts allow you to define custom audiences which are airline-specific operational Audiences. All cohorts are generated in real time.

Mixpanel Agent is an AI analyst built into Mixpanel, which allows you to dynamically create cohorts using behavioural, transactional, demographic, operational, loyalty, campaign, and engagement attributes.

Users

Provide

Maximum customer profiles supported.

Mixpanel Response: No fixed cap on the number of distinct user profiles per project.

Maximum audience size supported.

Mixpanel Response: No fixed cap on the number of distinct user profiles per audience.

Audience qualification latency.

Mixpanel Response: Near real-time — events and user enrolment in cohorts are typically queryable within seconds of ingestion

mixpanel

Maximum number of concurrent audiences.

Mixpanel Response: No fixed cap on the number of audiences.

Supported segmentation attributes.

Mixpanel Response: Any behavioral attribute (event occurrence, frequency, recency), profile/demographic property, transactional or operational property, and campaign/acquisition property — combinable with nested AND/OR/NOT logic, aggregation logic like MOST FREQUENT, FIRST TIME, AVERAGE, MAXIMUM to build precise segments.

AI-assisted segmentation capabilities.

Mixpanel Response: Mixpanel Agent builds cohorts from natural-language prompts without requiring users to know the underlying schema.

Airline customer references.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Largest enterprise audience deployment.

Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

Data refresh frequency.

Mixpanel Response: Dynamic cohorts recalculate every 15 minutes as user behavior changes; cohort sync to downstream destinations ranges from near real-time to hourly/daily depending on the platform.

Supported audience activation channels.

Mixpanel Response: Native integrations include Google Ads, Facebook Ads, Braze, Salesforce Marketing Cloud. Please refer to <https://mixpanel.com/partners/integrations> for more information.

9. AI-Powered Analytics & Predictive Intelligence

9.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
9.1.1. Ability to automatically identify statistically significant trends.	C	

9.1.2. Ability to detect anomalies across customer behaviour and business KPIs.	C	
9.1.3. Ability to forecast bookings, customer traffic, ancillary revenue, and engagement trends. Book Purchase ancillaries Upgrade fare Join loyalty programme Return to the platform Churn Respond to marketing campaigns	PC	On Mixpanel roadmap
9.1.5. Ability to generate AI-powered business insights automatically.	C	
9.1.6. Ability to recommend optimization opportunities.	C	
9.1.7. Ability to recommend next best action for customers.	C	
9.1.8. Ability to identify high-value customer cohorts.	C	
9.1.9. Ability to detect abnormal booking patterns.	C	
9.1.10. Ability to provide predictive customer lifetime value.	C	
9.1.11. Ability to perform root-cause analysis using AI.	C	
9.1.12. Ability to explain AI-generated recommendations.	C	
9.1.13. Ability to configure custom prediction models.	NC	Not currently on Mixpanel roadmap
9.1.14. Ability to integrate customer-owned AI/ML models.	NC	Not currently on Mixpanel roadmap
9.1.15. Ability to support Generative AI for business insight generation and natural-language analytics.	C	

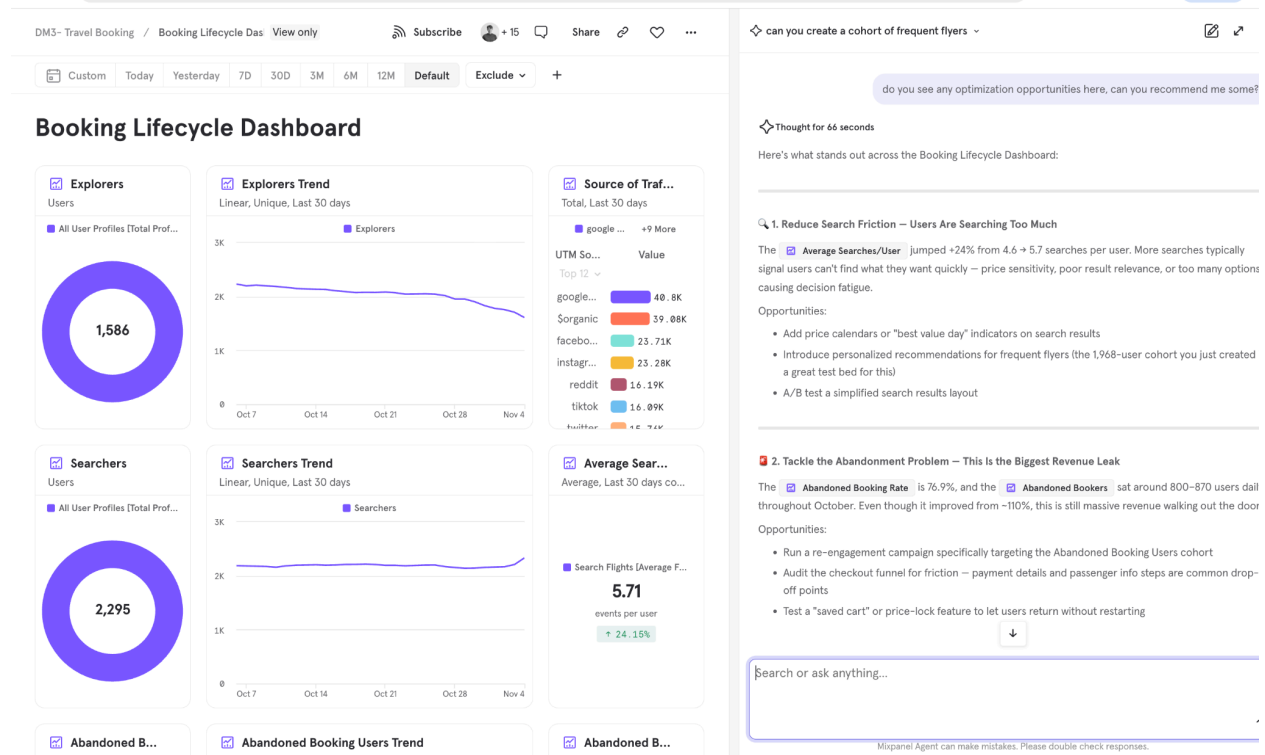

9.1.16. Ability to provide AI governance, explainability, auditability, and human oversight.	C	
--	---	--

9.2 Use Case Demonstration

Demonstrate:

Requirement	Mixpanel Response	Mixpanel Note
9.2.1. Predicting booking conversion probability.	PC	On Mixpanel roadmap
9.2.2. Predicting ancillary purchase likelihood.	PC	On Mixpanel roadmap
9.2.3. Predicting customer churn.	PC	On Mixpanel roadmap
9.2.4. AI-generated executive insights.	C	
9.2.5. Automated anomaly detection.	C	
9.2.6. Forecasting future bookings.	PC	On Mixpanel roadmap
9.2.7. AI-assisted identification of customer opportunities.	C	
9.2.8. Root-cause analysis of booking funnel decline.	C	
9.2.9. Natural language analytics for business users.	C	
9.2.10. AI-powered recommendation of KPIs requiring attention.	C	

Mixpanel Agent is an AI analyst built into Mixpanel. Ask it questions or give it tasks and the Agent interprets your intent and selects the right tools automatically. A single prompt can run an analysis, build a report, create a cohort, or walk you through a user's session replays without you specifying each step. This can be used to recommend next best action.

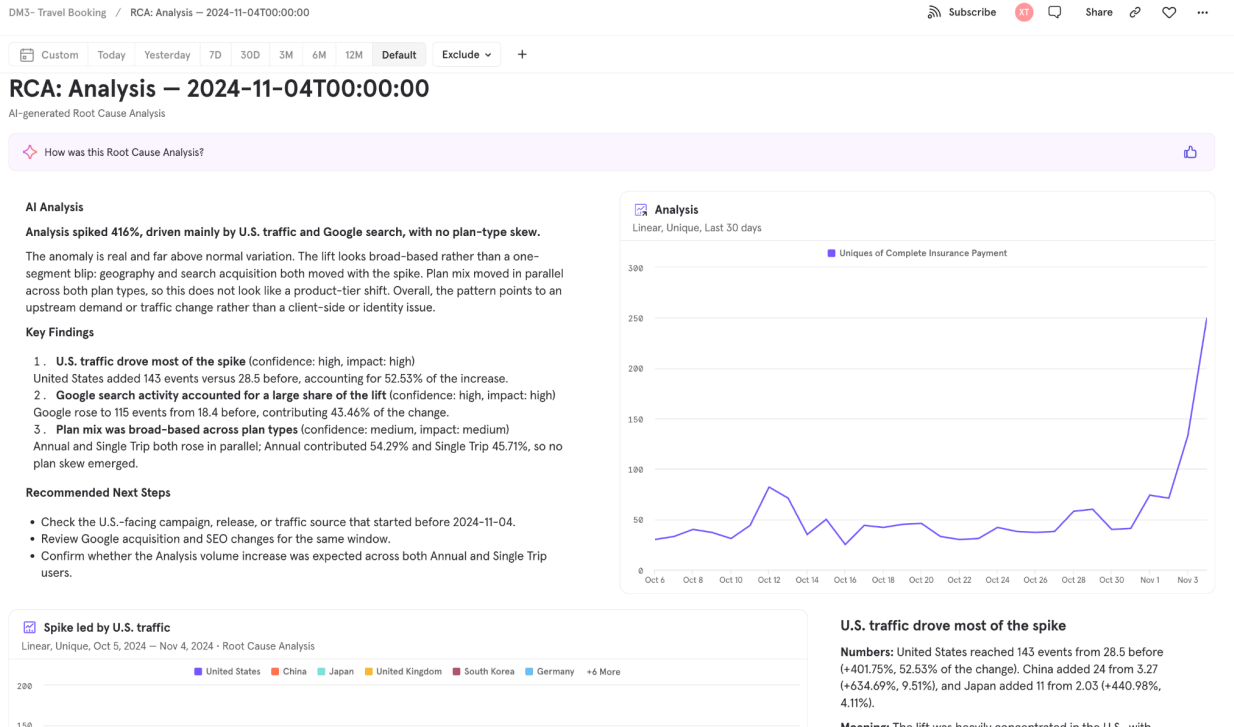

Mixpanel Agentic Automations are sub-agents of Mixpanel Agent that you configure once to look for optimization opportunities. KPI Monitoring helps you watch a metric you own and ships a personalized digest on the cadence you choose

The screenshot shows the configuration interface for an automation named 'Monitor booking spikes'. The interface includes the following sections:

- Metric:** A dropdown menu showing 'Uniques of Complete Flight Booking' as the selected metric.
- Instructions:** A text box containing the instruction: 'Focus on week on week change, and keep into account my campaign days.'
- Analysis window:** A dropdown menu showing 'Last 7 days' as the selected window.
- Analysis window preview:** A calendar view for July 2026, with the date 22 highlighted.
- Delivery:** A section for specifying where the output should go, with the email address 'xinlin.tan@mixpanel.com' entered.

Mixpanel's AI-Powered Root Cause Analysis (RCA) feature allow you to automatically investigating anomalies or trends in your data in a single click, saving teams hours on a weekly basis.

Provide

Native AI capabilities.

Mixpanel Response: Mixpanel Agent (natural-language report and cohort building, executive insight generation), Anomaly Detection (automatic alerting on unexpected metric spikes/dips), KPI Monitoring with Root Cause Analysis, Business Context Engine, Governance agent, Experiment agent . You can read more here: <https://docs.mixpanel.com/docs/mixpanel-agent>

Supported ML algorithms.

Mixpanel Response: Mixpanel pairs time-series forecasting (Google's open-source TimesFM V2 foundation model, migrated from Prophet) for anomaly detection and expected-range calculation with LLM-based agents that drive root-cause analysis, natural-language querying, and automated insight generation, and is extending this with supervised propensity models for churn and purchase prediction on the current roadmap.

Prediction latency.

Mixpanel Response: Monitoring and anomaly detection evaluate on schedules ranging from real-time event-fire triggers to hourly and daily checks, while interactive agent and forecasting queries typically return within seconds depending on data volume and query complexity (specific SLAs available on request).

Supported forecasting models.

mixpanel

Mixpanel Response: Forecasting uses open-source time-series foundation models, currently migrating from Prophet (Meta) to TimesFM V2 (Google), which tested roughly 85% lower mean MAPE and 54% lower RMSE across 3,000 real Mixpanel time series, and is expanding from alert-based anomaly detection to on-report expected-range bands and KPI trajectory forecasts (for example, tracking toward an OKR).

AI explainability capabilities.

Mixpanel Response: Every AI output traces back to the underlying data: Root Cause Analysis explains which segments and properties drove a metric change (with internal signals such as experiments, feature flags, annotations, and replays, plus external signals, on the roadmap), the Mixpanel Agent shows the queries and object context it used to reach an answer, and a governance layer provides auditability and human oversight of AI actions.

AI governance framework.

Mixpanel Response: Business context engine

Customer-owned model support.

Mixpanel Response: Business context engine

Airline customer references.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Largest AI deployment.

Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

Business outcomes achieved.

Mixpanel Response:

- Air Premia: Achieved more than 20% improvement in direct booking conversion by using behavioural analytics to optimise the digital booking experience.
Source: <https://www.mfitlab.com/solutions/blog/mixpanel-airpremia>
- Nykaa: Successfully migrated from Adobe Analytics to Mixpanel over a six-month implementation while handling billions of monthly events. The migration enabled analytics self-service, reduced warehouse query costs, improved analyst productivity (saving more than 15% of analyst time), and uncovered new customer lifetime value insights through behavioural analytics.

10. Digital Experience Analytics

10.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
-------------	-------------------	---------------

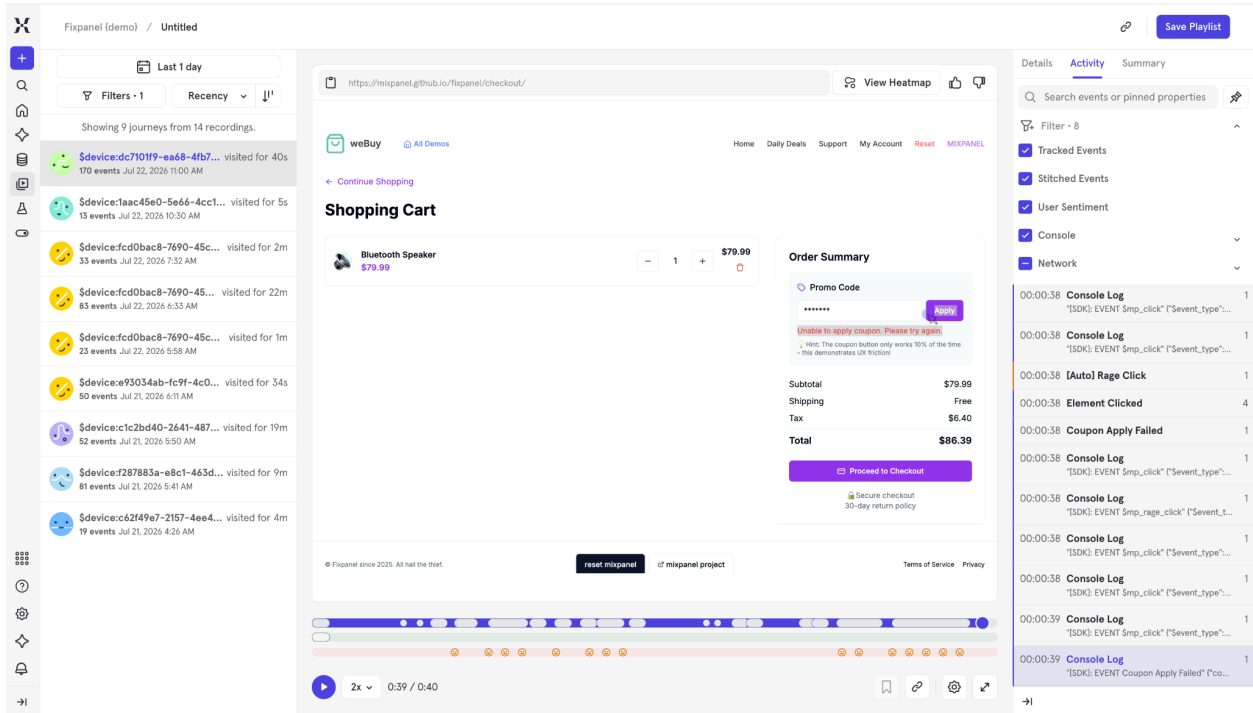

10.1.1. Ability to capture customer sessions across Web and Mobile Applications.	C	
10.1.2. Ability to replay customer sessions.	C	
10.1.3. Ability to identify rage clicks.	C	
10.1.4. Ability to detect dead clicks.	C	
10.1.5. Ability to identify excessive scrolling.	C	
10.1.6. Ability to detect repeated customer actions.	C	
10.1.7. Ability to identify form abandonment.	C	
10.1.8. Ability to identify customer struggle.	C	
10.1.9. Ability to capture JavaScript errors.	C	
10.1.10. Ability to capture API failures.	C	
10.1.11. Ability to capture page rendering failures.	C	
10.1.12. Ability to detect slow-loading pages.	C	Blank pages
10.1.13. Ability to analyse customer frustration.	C	
10.1.14. Ability to identify UX bottlenecks.	C	
10.1.15. Ability to correlate technical issues with business KPIs.	C	
10.1.16. Ability to prioritise issues based on business impact.	C	
10.1.17. Ability to integrate with enterprise observability platforms.	NC	Not supported currently. Please share which platforms to integrate with

10.1.18. Ability to support privacy masking of sensitive customer information during session replay.	C	
--	---	--

10.2 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
10.2.1. Session replay of abandoned bookings.	C	
10.2.2. Identification of rage-click events.	C	
10.2.3. Detection of customer struggle.	C	
10.2.4. Form abandonment analysis.	C	
10.2.5. API failure correlation.	C	
10.2.6. Mobile application usability analysis.	C	
10.2.7. Page performance impact on booking conversion.	C	
10.2.8. Technical issue prioritisation.	C	
10.2.9. Privacy masking during session replay.	C	
10.2.10. Airline-specific customer journey troubleshooting.	C	

Mixpanel's Session Replay functionality empowers teams to combine both qualitative and quantitative data to quickly uncover the drivers behind purchases and drop-offs. Please refer to <https://docs.mixpanel.com/docs/session-replay> for more information.

Provide

Maximum sessions captured daily.

Mixpanel Response: There is no hard daily cap

Session replay retention period.

Mixpanel Response: Configurable between 7 to 360 days.

Supported masking capabilities.

Mixpanel Response: Mixpanel offers robust, client-side masking for input, text, elements. Specific elements can be unmasked, and input fields are always masked.

Supported mobile platforms.

Mixpanel Response: Session Replay is supported on Web, iOS, Android, and React Native SDK. Heatmaps is supported on Web SDK.

Performance overhead introduced.

Mixpanel Response: Limited performance impact as session replay SDKs are designed for lightweight async capture.

Airline customer references.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Largest deployment.

mixpanel

Mixpanel Response: Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

Integration capabilities.

Mixpanel Response: Mixpanel SDK integration.

Session search latency.

Mixpanel Response: UI response is within seconds.

Storage architecture.

Mixpanel Response: Storage setting will follow project data residency. Storage duration is configurable between 7 to 360 days.

11. Heatmaps & User Interaction Analytics

11.1 Capability Requirements

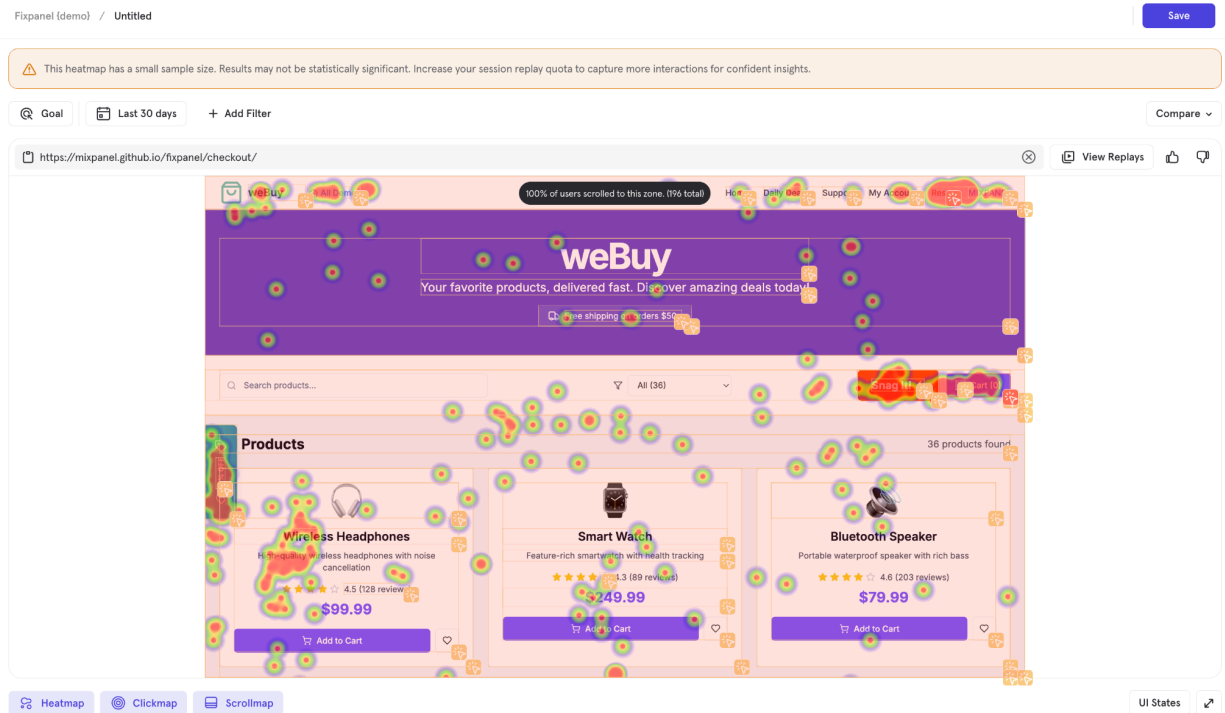

Requirement	Mixpanel Response	Mixpanel Note
11.1.1. Ability to generate click heatmaps.	C	
11.1.2. Ability to generate scroll depth heatmaps.	C	
11.1.3. Ability to generate movement heatmaps.	C	
11.1.4. Ability to analyse customer attention.	C	
11.1.5. Ability to analyse content engagement.	C	
11.1.6. Ability to analyse banner performance.	C	
11.1.7. Ability to analyse CTA effectiveness.	C	
11.1.8. Ability to analyse form interactions.	C	
11.1.9. Ability to compare heatmaps across audience segments.	C	
11.1.10. Ability to compare historical and current interaction behaviour.	C	

11.1.11. Ability to analyse interaction behaviour across desktop, mobile web, Android, and iOS.	C	
11.1.12. Ability to identify ignored content.	C	
11.1.13. Ability to identify high-engagement content.	C	
11.1.14. Ability to correlate heatmaps with business KPIs.	C	
11.1.15. Ability to export interaction reports.	C	
11.1.16. Ability to provide AI-assisted recommendations based on interaction patterns.	NC	Not supported currently

11.2 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
11.2.1. Homepage click heatmap.	C	
11.2.2. Flight search page interaction analysis.	C	
11.2.3. Booking funnel interaction heatmap.	C	
11.2.4. Scroll-depth analysis.	C	
11.2.5. Mobile application interaction heatmap.	NC	Not supported currently
11.2.6. Comparison of first-time versus returning customer behaviour.	C	
11.2.7. Analysis of ancillary selection page.	C	
11.2.8. CTA effectiveness analysis.	C	
11.2.9. Airline promotional banner engagement.	C	
11.2.10. AI-generated UX improvement recommendations.	NC	Not supported currently

Mixpanel Heatmaps help you visualize user interactions on your web application, showing where users click the most. This feature enables teams to quickly identify areas of high engagement and friction, helping to optimize user experiences and improve conversion rates. Heatmaps, Scrollmaps and Clickmaps are all supported. Please refer to <https://docs.mixpanel.com/docs/session-replay/heatmaps> for more information.

Provide

Supported heatmap types.

Mixpanel Response: Click heatmaps, scroll-depth heatmaps, and attention/movement heatmaps

Maximum pages analysed.

Mixpanel Response: No documented hard cap on number of pages/URLs

Historical retention period.

Mixpanel Response: Retention of session replays and heatmaps can be customised from 7 to 360 days

Data refresh latency.

Mixpanel Response: Near real time

Mobile platform support.

Mixpanel Response: Session Replay is supported on Web, iOS, Android, and React Native SDK. Heatmaps is supported on Web SDK.

Airline customer references.

mixpanel

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Largest deployment.

Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

Export capabilities.

Mixpanel Response: Exporting heatmaps is not fully supported today, you can currently export underlying events and share links to specific heatmaps.

AI-assisted UX recommendations.

Mixpanel Response: Mixpanel Agent can be used to summarise session replays and recommend next steps. AI assisted heatmap recommendations are not supported today.

Performance impact on customer experience.

Mixpanel Response: Limited performance impact as session replay SDKs are designed for lightweight async capture.

12. Reporting, Dashboards & Business Intelligence

12.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
12.1.1. Ability to create interactive executive dashboards with real-time and historical business KPIs.	C	
12.1.2. Ability to create role-based dashboards for Product, Marketing, Revenue Management, Digital, Customer Experience, Loyalty, Operations, Finance, and Executive teams.	C	
12.1.3. Ability to provide self-service dashboard creation without engineering dependency.	C	
12.1.4. Ability to create custom reports using configurable dimensions, metrics, segments, and calculated fields.	C	

12.1.5. Ability to support drill-down, drill-through, and slice-and-dice analysis.	C	
12.1.6. Ability to support scheduled reports with automated distribution through Email, APIs, or enterprise collaboration platforms.	C	
12.1.7. Ability to export reports in multiple formats including PDF, Excel, CSV, Power BI, Tableau, and enterprise BI platforms.	C	
12.1.8. Ability to provide real-time dashboards for operational monitoring during promotional campaigns, flash sales, and IROPS.	C	
12.1.9. Ability to compare business performance across routes, geographies, devices, channels, customer cohorts, and time periods.	C	
12.1.10. Ability to monitor airline-specific KPIs including booking conversion, ancillary attachment, check-in adoption, loyalty engagement, refund trends, cancellation trends, and digital channel adoption.	C	
12.1.11. Ability to create configurable scorecards for executive decision-making.	C	
12.1.12. Ability to support embedded analytics within enterprise applications.	C	
12.1.13. Ability to create automated alerts for KPI deviations and business anomalies.	C	
12.1.14. Ability to maintain historical dashboard versions and audit trails.	C	
12.1.15. Ability to integrate dashboards with enterprise Business Intelligence platforms.	C	

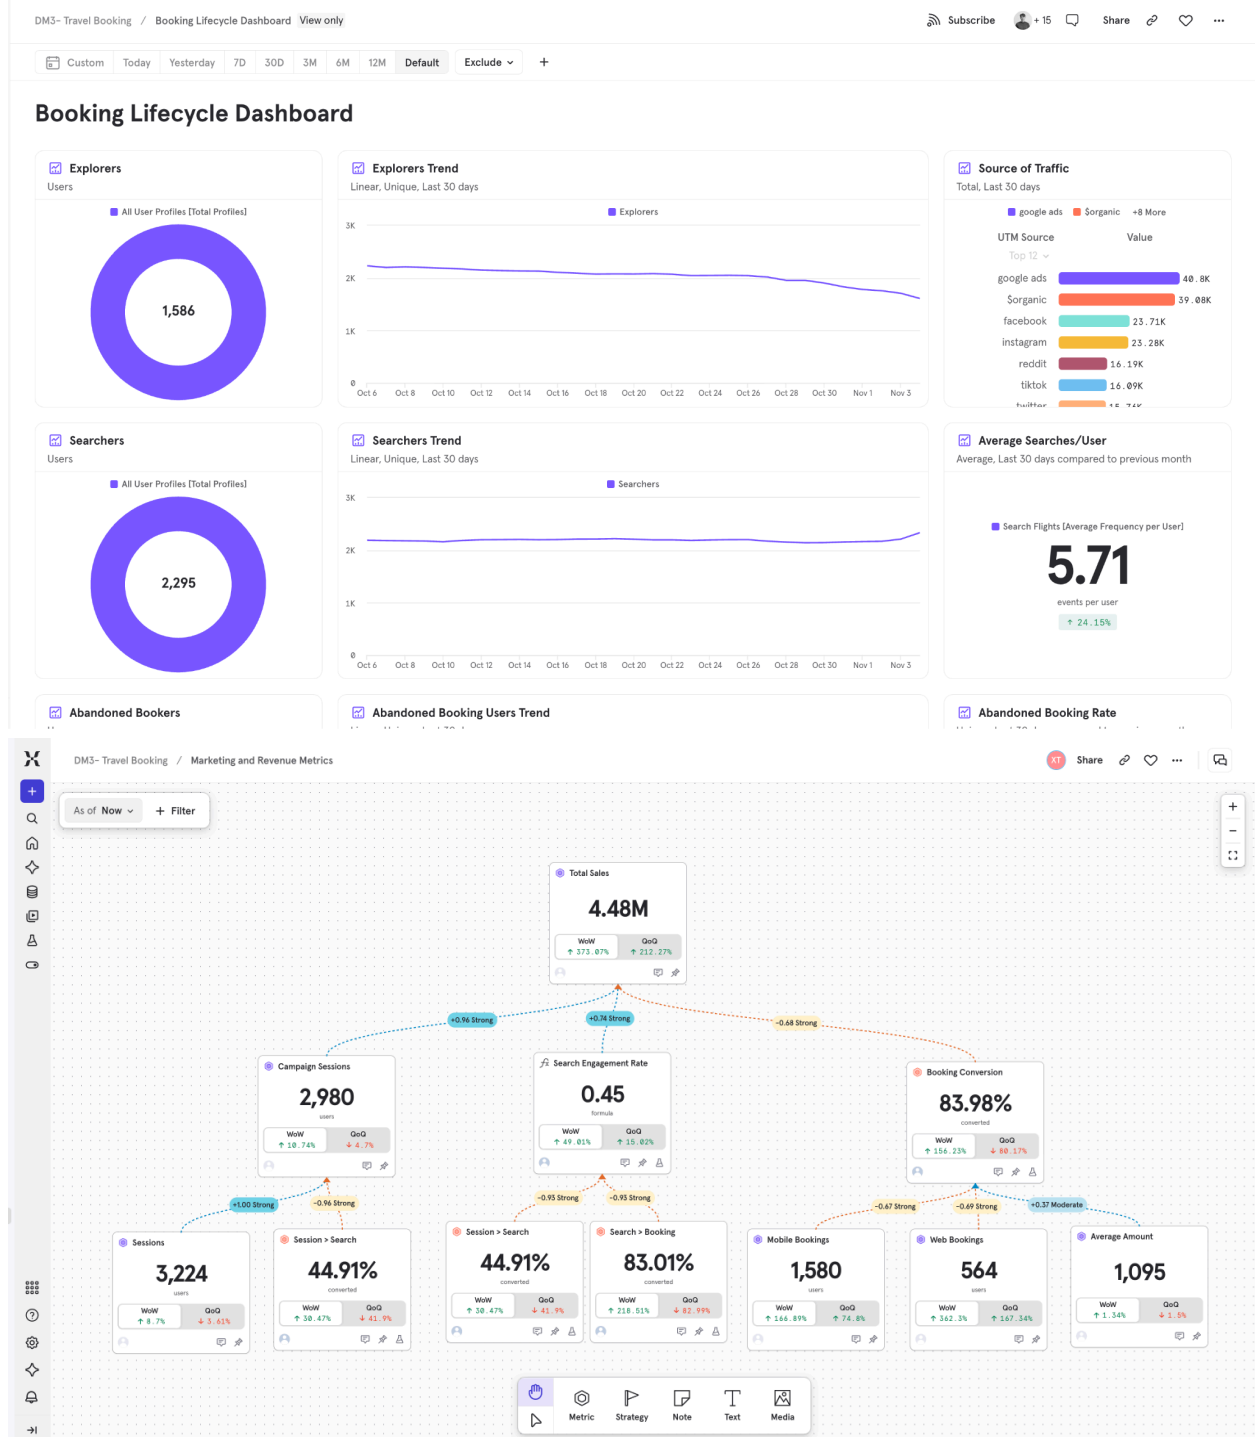

12.2 Use Case Demonstration

Requirement	Mixpanel	Mixpanel Note
-------------	----------	---------------

	Response	
12.2.1. Demonstrate Executive Digital Performance Dashboard.	C	
12.2.2. Demonstrate Product Analytics Dashboard.	C	
12.2.3. Demonstrate Airline Booking Performance Dashboard.	C	
12.2.4. Demonstrate Marketing Campaign Performance Dashboard.	C	
12.2.5. Demonstrate Ancillary Revenue Dashboard.	C	
12.2.6. Demonstrate Customer Journey Performance Dashboard.	C	
12.2.7. Demonstrate Real-Time Operational Dashboard during a promotional sale.	C	
12.2.8. Demonstrate automated KPI alerting for business exceptions.	C	

Mixpanel's dashboards (Boards) bring reports, text context, and visualizations into a single collaborative workspace. Teams can build role-based views for product, marketing, or executive audiences, share via public link or emailed, and start from pre-built templates for common use cases like adoption and retention.

Metric Trees extend this beyond flat dashboards into a structured, cause-and-effect model of the business: a focus metric (a granular North Star) sits at the top, with input metrics as the levers teams can directly influence beneath it. A built-in correlation view shows how lower-level metrics actually move the focus metric, so teams can trace a drop-off down the tree to the specific feature or driver responsible, rather than guessing from a list of disconnected KPIs.

DM3- Travel Booking / Marketing and Revenue Metrics

As of Now + Filter

Share

Metric Strategy Note Text Media

Provide

Maximum dashboards supported.

Mixpanel Response: No limited on the number of dashboards (Boards) per project

**Maximum concurrent dashboard users.**

Mixpanel Response: No limit on simultaneous UI dashboard viewers

Dashboard rendering latency.

Mixpanel Response: Mixpanel's in-memory query engine delivers sub-second query times

Supported visualization types.

Mixpanel Response: Insights (line, stacked line, bar, stacked bar, pie, table, metric), Funnels, Retention curves, Flows (Sankey + Top Paths), Session Replays and Heatmaps. Boards are combinable with text/context cards on shared dashboards.

Supported export formats.

Mixpanel Response: Boards can be exported as email. Individual reports can be exported as PNG, PDF, CSV.

Largest enterprise deployment.

Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

Airline customer references.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Dashboard customization capabilities.

Mixpanel Response: All boards can be customised in Mixpanel.

13. Self-Service Analytics & Business User Enablement

13.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
13.1.1. Ability to create custom reports through intuitive visual interfaces.	C	
13.1.2. Ability to build dashboards using drag-and-drop functionality.	C	

13.1.3. Ability to create calculated metrics and KPIs.	C	
13.1.4. Ability to perform ad-hoc data exploration.	C	
13.1.5. Ability to create reusable report templates.	C	
13.1.6. Ability to build customer segments through visual interfaces.	C	
13.1.7. Ability to define business rules without coding.	C	
13.1.8. Ability to create automated alerts and notifications.	C	
13.1.9. Ability to schedule reports and dashboards.	C	
13.1.10. Ability to create custom dimensions and metrics.	C	
13.1.11. Ability to maintain report version history.	C	
13.1.12. Ability to support collaborative analytics across business teams.	C	
13.1.13. Ability to provide role-based access control for report creation and publishing.	C	
13.1.14. Ability to preview reports before publishing.	C	
13.1.15. Ability to support governed self-service analytics while maintaining enterprise data standards.	C	
13.1.16. Ability to support no-code and low-code analytics workflows.	C	

13.2 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
-------------	-------------------	---------------

13.2.1. Demonstrate business user creating a dashboard without technical support.	C	
13.2.2. Demonstrate creation of a custom KPI.	C	
13.2.3. Demonstrate ad-hoc customer segmentation.	C	
13.2.4. Demonstrate report scheduling.	C	
13.2.5. Demonstrate collaborative dashboard sharing.	C	
13.2.6. Demonstrate approval workflow for dashboard publishing.	C	
13.2.7. Demonstrate role-based analytics access.	C	
13.2.8. Demonstrate executive report creation.	C	

Mixpanel has several types of reports: Insights, Funnels, Flows, Retention and other advanced reports, each with their specialized use. Mixpanel has been built from ground up for self service analytics. We will share more with IndiGo team in the presentation.

Provide

Percentage of use cases requiring technical support.

Mixpanel Response: Mixpanel is designed so day-to-day reporting, segmentation, and dashboard-building don't require engineering once initial event tracking is instrumented.

Average report creation time.

Mixpanel Response: Mixpanel is designed for self-service report creation within seconds.

Maximum custom reports supported.

Mixpanel Response: No limit on custom reports supported

Supported user roles.

Mixpanel Response: Four core project roles — Owner, Admin, Analyst, and Consumer — with custom roles available on Enterprise plans for more granular access control, including gating access to classified/sensitive data.

Training requirements.

Mixpanel Response: Enterprise licenses include a dedicated Onboarding Specialist during implementation and an ongoing Customer Success Manager at no extra cost, plus self-serve resources through Mixpanel Academy/documentation.

Adoption methodology.

Mixpanel Response: Mixpanel Onboarding follows an iterative sprint model (1–3 weeks per sprint) across four phases — Plan (define tracking plan/KPIs), Implement (QA and data governance setup), Launch (build core reports and cohorts), and Roll Out & Adoption (start small, prove value, scale, appoint champions, track adoption from day one)

Largest deployment.

Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

Customer references.

Mixpanel Response: Representative enterprise customers include Swiggy, Nykaa, CRED, BharatPe in India, TFE Hotels in ANZ. Additional enterprise customer references are available subject to customer approval and applicable confidentiality obligations.

14. Enterprise Data Quality & Governance

14.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
14.1.1. Ability to validate incoming events before processing.	C	
14.1.2. Ability to monitor data completeness, accuracy, consistency, and integrity.	C	
14.1.3. Ability to detect missing, duplicate, and malformed events.	C	
14.1.4. Ability to support enterprise event governance.	C	
14.1.5. Ability to maintain metadata repositories.	PC	On Mixpanel Roadmap
14.1.6. Ability to maintain event taxonomy versioning.	PC	On Mixpanel Roadmap
14.1.7. Ability to support enterprise data lineage.	PC	On Mixpanel Roadmap
14.1.8. Ability to monitor SDK implementation quality.	PC	On Mixpanel Roadmap
14.1.9. Ability to identify broken tracking implementations.	PC	On Mixpanel Roadmap
14.1.10. Ability to support configurable validation rules.	C	
14.1.11. Ability to maintain audit trails for analytics changes.	PC	On Mixpanel Roadmap

14.1.12. Ability to support role-based governance.	C	
14.1.13. Ability to manage business glossary and metadata.	C	
14.1.14. Ability to support enterprise data stewardship.	PC	On Mixpanel Roadmap
14.1.15. Ability to maintain historical changes.	PC	On Mixpanel Roadmap
14.1.16. Ability to integrate with enterprise Data Governance platforms.	C	

14.2 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
14.2.1. Demonstrate event validation.	C	
14.2.2. Demonstrate broken tracking detection.	PC	On Mixpanel Roadmap
14.2.3. Demonstrate metadata management.	PC	On Mixpanel Roadmap
14.2.4. Demonstrate data quality dashboard.	PC	On Mixpanel Roadmap
14.2.5. Demonstrate audit reporting.	PC	On Mixpanel Roadmap
14.2.6. Demonstrate event taxonomy governance.	C	
14.2.7. Demonstrate SDK health monitoring.	PC	On Mixpanel Roadmap
14.2.8. Demonstrate enterprise lineage.	PC	On Mixpanel Roadmap

Mixpanel Lexicon has enterprise data quality capabilities, details have been shared in Section 2. We will demonstrate these capabilities in the presentation.

Provide

Supported governance capabilities.

Mixpanel Response: Lexicon (central event/property metadata dictionary), Data Standards (enforces naming/metadata rules and flags non-compliant events), Event Approval (gates newly ingested events from going live until reviewed), Anomaly Detection and Data Volume Monitoring (ongoing data quality checks), Audit Log (org/project activity tracking), and role-based access control governing who can make schema changes.

**Maximum event taxonomy size.**

Mixpanel Response: Limit of 2000 distinct event properties per event

Metadata capabilities.

Mixpanel Response: Lexicon stores display name, description, tags, owner/team contacts, and visibility flags for every event and property, managed via the UI, CSV export/import, or the Lexicon Schemas API.

Data quality monitoring frequency.

Mixpanel Response: Continuous rather than fixed-interval — Anomaly Detection and Data Volume Monitoring run ongoing checks against expected ranges and alert immediately on deviation.

Largest deployment.

Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

Airline customer references.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Governance certifications.

Mixpanel Response: Mixpanel maintains internationally recognised governance, security, and compliance certifications, including ISO 27001 and SOC 2 Type II. Additional certifications, audit reports, and compliance documentation are available through the Mixpanel Trust Center: <https://trust.mixpanel.com>

Audit retention period.

Mixpanel Response: Mixpanel maintains audit logs for administrative and security events. Audit log retention and capabilities are documented in the Mixpanel Audit Log documentation: <https://docs.mixpanel.com/docs/access-security/audit-log>

Mixpanel Lexicon automatically generates an enterprise event taxonomy that identifies duplicate events. Lexicon allows you to enable an event approval workflow.

Non-Functional Detailed Requirements

1. Architecture & Solution Design

1.1 Architecture Requirements

Requirement	Mixpanel Response	Mixpanel Note
1.1.1. Ability to provide a cloud-native, highly scalable, and resilient architecture.	C	
1.1.2. Ability to support deployment on Public Cloud, Private Cloud, Hybrid Cloud, and Multi-Cloud environments.	C	Mixpanel is hosted on public cloud
1.1.3. Ability to provide modular and loosely coupled architecture supporting independent scalability of individual services.	C	
1.1.4. Ability to support microservices-based architecture wherever applicable.	C	Mixpanel has open APIs
1.1.5. Ability to provide API-first architecture enabling seamless integration with enterprise applications.	C	
1.1.6. Ability to support event-driven architecture using asynchronous messaging and streaming technologies.	C	
1.1.7. Ability to provide configurable architecture supporting future business expansion without major redesign.	C	
1.1.8. Ability to support multiple production environments, business units, brands, and digital properties through a single platform.	C	
1.1.9. Ability to provide architecture supporting millions of customer profiles and billions of digital interactions annually.		

1.2 Solution Design Requirements

Requirement	Mixpanel Response	Mixpanel Note
1.2.1. Ability to document all third-party dependencies.	C	
1.2.2. Ability to identify infrastructure requirements for implementation.	C	
1.2.3. Ability to define network connectivity requirements.	C	
1.2.4. Ability to define security zones and trust boundaries.	C	
1.2.5. Ability to document integration architecture with airline	C	

reservation systems, CRM, CDP, Marketing Automation, Loyalty Platform, Data Warehouse, Business Intelligence, Personalization, Experimentation Platform, and Customer Support applications.		
1.2.6. Ability to support architecture reviews during implementation.	C	
1.2.7. Ability to maintain architecture documentation throughout the contract duration.	C	
1.2.8. Ability to support enterprise architecture governance.	C	

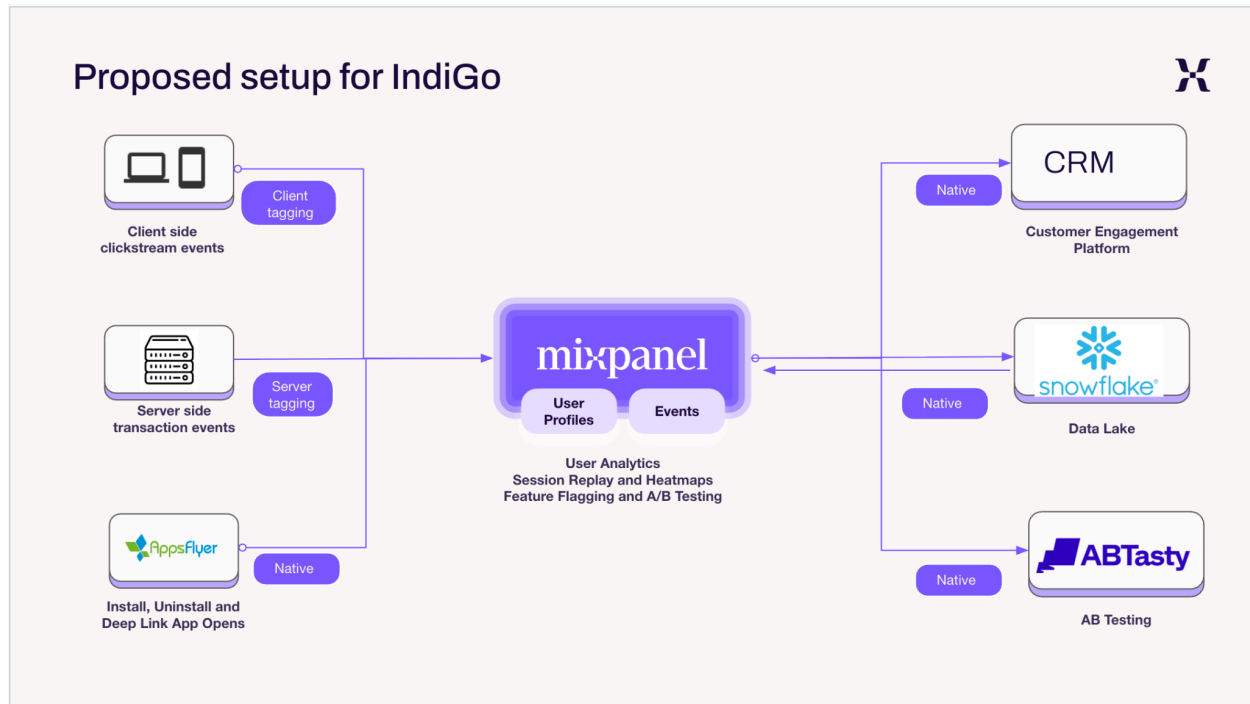

1.3 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
1.3.1. Demonstrate High-Level Architecture for an enterprise airline implementation.	C	
1.3.2. Demonstrate end-to-end data flow from digital touchpoints to reporting.	C	
1.3.3. Demonstrate architecture scalability during high-volume booking periods.	C	
1.3.4. Demonstrate multi-region deployment.	NC	SAAS
1.3.5. Demonstrate integration architecture.	C	
1.3.6. Demonstrate architecture redundancy and failover.	NC	SAAS
1.3.7. Demonstrate deployment across Development, QA, UAT, Pre-Production, Disaster Recovery, and Production environments.	NC	SAAS

Provide

High-Level Architecture Diagram, Low-Level Architecture Diagram.

Mixpanel response: Please refer to diagram for architecture diagram. We will discuss more in the presentation.

Infrastructure sizing recommendations.

Mixpanel response: Please share details of your current volumes.

Technology stack.

Mixpanel response: Please share details of your tech stack, Mixpanel is SaaS platform and integrates through APIs.

Supported cloud platforms.

Mixpanel response: Mixpanel works with major cloud platforms like AWS, GCP, Azure.

Largest production deployment.

Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

Airline customer references.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Reference architecture documentation.

Mixpanel response: Please refer to <https://docs.mixpanel.com/docs/tracking-methods> for more information.

2. Security, Privacy & Compliance

2.1 Information Security Requirement

Requirement	Mixpanel Response	Mixpanel Note
2.1.1. Ability to comply with ISO 27001, SOC 2 Type II, and other internationally recognized security standards.	C	
2.1.2. Ability to demonstrate compliance with Digital Personal Data Protection Act (DPDP), GDPR, and applicable privacy regulations.	C	
2.1.3. Ability to encrypt data at rest using AES-256 or equivalent.	C	
2.1.4. Ability to encrypt data in transit using TLS 1.2 or higher.	C	
2.1.5. Ability to implement secure encryption key management.	C	
2.1.6. Ability to support Role-Based Access Control (RBAC) with fine-grained permissions.	C	
2.1.7. Ability to support Multi-Factor Authentication (MFA) for administrative access.	C	
2.1.8. Ability to integrate with enterprise Identity Providers through SAML 2.0, OAuth 2.0, and OpenID Connect.	C	
2.1.9. Ability to support IP allow-listing and network access restrictions.	PC	For warehouse connectors
2.1.10. Ability to provide immutable audit logs for all administrative and security events.	C	
2.1.11. Ability to detect unauthorized access attempts.	C	
2.1.12. Ability to support privileged access management.	C	
2.1.13. Ability to support secure API authentication using OAuth, JWT, API Keys, or mutual TLS.	C	
2.1.14. Ability to support vulnerability scanning and continuous security monitoring.	C	
2.1.15. Ability to undergo periodic independent penetration testing.	C	
2.1.16. Ability to provide documented vulnerability management and patch management processes.	C	
2.1.17. Ability to provide security incident response procedures.	C	

2.1.18. Ability to notify IndiGo of security incidents within agreed SLA timelines.	C	
2.1.19. Ability to support secure software development lifecycle (SSDLC).	C	

2.2 Privacy Requirements

Requirement	Mixpanel Response	Mixpanel Note
2.2.1. Ability to support customer consent management.	C	
2.2.2. Ability to support configurable cookie consent frameworks.	C	
2.2.3. Ability to collect analytics data based on customer consent preferences.	C	
2.2.4. Ability to support Personally Identifiable Information (PII) masking.	C	
2.2.5. Ability to support pseudonymization and anonymization of customer data.	C	
2.2.6. Ability to support configurable data retention policies.	C	
2.2.7. Ability to support secure deletion of customer data.	C	
2.2.8. Ability to support Right to Access, Right to Rectification, Right to Erasure, Right to Restrict Processing, and other regulatory privacy requirements.	C	
2.2.9. Ability to maintain complete audit trails for privacy-related requests.	C	
2.2.10. Ability to classify customer data based on sensitivity.	C	
2.2.11. Ability to prevent unauthorized access to sensitive information.	C	
2.2.12. Ability to support privacy-by-design principles across the platform.	C	

2.3 Compliance Requirements

Requirement	Mixpanel Response	Mixpanel Note
2.3.1. Ability to maintain compliance with applicable aviation, financial, and data protection regulations.	C	

2.3.2. Ability to support enterprise compliance reporting.	C	
2.3.3. Ability to generate audit evidence for regulatory assessments.	C	
2.3.4. Ability to maintain historical compliance records.	C	
2.3.5. Ability to support third-party compliance audits.	C	
2.3.6. Ability to maintain complete configuration history for audit purposes.	C	
2.3.7. Ability to demonstrate security certifications during the proposal stage.	C	
2.3.8. Ability to support customer-specific compliance requirements.	C	
2.3.9. Ability to maintain segregation of duties across administrative functions.	C	
2.3.10. Ability to support enterprise governance frameworks.	C	

2.4 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
2.4.1. Demonstrate Single Sign-On integration.	C	
2.4.2. Demonstrate Multi-Factor Authentication.	C	
2.4.3. Demonstrate Role-Based Access Control.	C	
2.4.4. Demonstrate audit logging.	C	
2.4.5. Demonstrate customer consent management.	C	
2.4.6. Demonstrate PII masking.	C	
2.4.7. Demonstrate encryption mechanisms.	C	
2.4.8. Demonstrate security monitoring.	C	
2.4.9. Demonstrate vulnerability management process.	C	
2.4.10. Demonstrate regulatory compliance reporting.	C	
2.4.11. Demonstrate incident notification workflow.	C	
2.4.12. Demonstrate security administration dashboard.	C	

Provide

	Mixpanel Response
Security Architecture Documentation. ISO 27001 Certificate. SOC 2 Type II Report. GDPR Compliance Statement. DPDP Readiness Statement. Penetration Testing Summary. Vulnerability Management Policy. Incident Response Process. Security Certifications. Data Encryption Standards. Key Management approach. Security SLA commitments (Inside incident response plan)	The following documents are present in the Trust Center: https://trust.mixpanel.com

Authentication mechanisms supported.	https://docs.mixpanel.com/docs/access-security/single-sign-on
Audit log retention period.	https://docs.mixpanel.com/docs/access-security/audit-log
Airline customer references.	Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.
Availability SLA	 Mixpanel_SLA_2026 (1).pdf

3. Performance & Scalability

3.1 Performance Requirements

Requirement	Mixpanel Response	Mixpanel Note
-------------	-------------------	---------------

3.1.1. Ability to ingest and process customer interaction events in near real-time.	C	
3.1.2. Ability to process analytics events from Web, Mobile Applications, APIs, kiosks, partner channels, and future digital touchpoints without performance degradation.	C	
3.1.3. Ability to maintain low-latency processing for event ingestion, enrichment, segmentation, reporting, and analytics.	C	
3.1.4. Ability to support real-time dashboards with minimal processing delay.	C	
3.1.5. Ability to provide configurable caching mechanisms for frequently accessed dashboards and reports.	C	
3.1.6. Ability to maintain consistent response times irrespective of data volume growth.	C	
3.1.7. Ability to support concurrent execution of complex analytical queries.	C	
3.1.8. Ability to optimize query execution using indexing, partitioning, and intelligent data processing techniques.	C	
3.1.9. Ability to process streaming and batch data simultaneously.	C	
3.1.10. Ability to support configurable data aggregation intervals.	C	
3.1.11. Ability to provide performance optimization recommendations based on workload characteristics.	C	
3.1.12. Ability to automatically optimize storage and compute utilization.	C	
3.1.13. Ability to support configurable resource allocation for different workloads.	C	
3.1.14. Ability to isolate workloads to prevent resource contention.	C	

3.2 Scalability Requirements

Requirement	Mixpanel Response	Mixpanel Note
3.2.1. Ability to horizontally scale application services without downtime.	C	
3.2.2. Ability to vertically scale compute resources where applicable.	C	
3.2.3. Ability to support automatic scaling during promotional	C	

campaigns, flash sales, holidays, schedule changes, and IROPS.		
3.2.4. Ability to process billions of analytics events annually.	C	
3.2.5. Ability to support millions of customer profiles.	C	
3.2.6. Ability to support thousands of concurrent business users.	C	
3.2.7. Ability to scale independently across ingestion, processing, storage, reporting, and activation layers.	C	
3.2.8. Ability to support multiple digital products from a single platform.	C	
3.2.9. Ability to support multiple brands and business units.	C	

3.3 Capacity Management

The solution should support:

Requirement	Mixpanel Response	Mixpanel Note
3.3.1. Ability to provide capacity planning recommendations.	C	
3.3.2. Ability to forecast infrastructure growth.	C	
3.3.3. Ability to monitor infrastructure utilization.	C	
3.3.4. Ability to identify performance bottlenecks.	C	
3.3.5. Ability to recommend scaling actions proactively.	C	
3.3.6. Ability to support configurable resource thresholds.	C	
3.3.7. Ability to monitor storage utilization.	C	
3.3.8. Ability to support archival without impacting operational performance.	C	

3.4 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
3.4.1. Demonstrate platform performance during airline promotional sale.	C	
3.4.2. Demonstrate analytics processing for billions of annual events.	C	
3.4.3. Demonstrate dashboard response under peak concurrent users.	C	
3.4.4. Demonstrate automatic horizontal scaling.	C	

3.4.5. Demonstrate API performance under heavy load.	C	
3.4.6. Demonstrate streaming analytics processing.	C	
3.4.7. Demonstrate performance monitoring dashboard.	C	
3.4.8. Demonstrate capacity forecasting.	C	

Provide

Maximum events processed per second.

Mixpanel Response: Mixpanel's infrastructure has processed a peak of 2 million events/second, with the platform ingesting over 1 trillion events per month across customers.

Maximum annual events supported.

Mixpanel Response: At platform scale, Mixpanel ingests 30+ billion events per day (1T+/month); the Import API is built to handle billions of events per day per customer.

Maximum customer profiles supported.

Mixpanel Response: No limit on number of profiles

Maximum concurrent dashboard users.

Mixpanel Response: No limit on concurrent users.

Average event processing latency.

Mixpanel Response: Events are typically available for querying within seconds of hitting Mixpanel's ingestion servers (near real-time).

Dashboard rendering latency.

Mixpanel Response: Events are typically available for querying within seconds of hitting Mixpanel's ingestion servers (near real-time).

Query response time.

Mixpanel Response: Events are typically available for querying within seconds of hitting Mixpanel's ingestion servers (near real-time).

Peak API throughput.

Mixpanel Response: At platform scale, Mixpanel ingests 30+ billion events per day (1T+/month); the Import API is built to handle billions of events per day per customer.

Infrastructure sizing recommendations.

Mixpanel Response: At platform scale, Mixpanel ingests 30+ billion events per day (1T+/month); the Import API is built to handle billions of events per day per customer.

Largest production deployment.

Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

Airline customer references.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Performance SLA commitments.

Mixpanel Response: Mixpanel provides enterprise-grade service level commitments covering platform availability and performance as defined in the applicable Enterprise Subscription Agreement and SLA. Performance is backed by a globally distributed, cloud-native architecture designed to support high-volume event ingestion, near real-time analytics, and automatic scaling. Detailed SLA commitments can be shared during the commercial and contracting phase.

 Mixpanel_SLA_2026 (1).pdf

4. Integration & Data Connectivity

4.1 Integration Requirements

Requirement	Mixpanel Response	Mixpanel Note
4.1.1. Ability to integrate with airline Passenger Service Systems (PSS).	C	
4.1.2. Ability to integrate with airline booking engines.	C	
4.1.3. Ability to integrate with Customer Relationship Management (CRM) platforms.	C	
4.1.4. Ability to integrate with Customer Data Platforms (CDP).	C	
4.1.5. Ability to integrate with Loyalty Management platforms.	C	
4.1.6. Ability to integrate with Marketing Automation platforms.	C	
4.1.7. Ability to integrate with Personalization platforms.	C	
4.1.8. Ability to integrate with Experimentation platforms.	C	
4.1.9. Ability to integrate with Payment platforms.	C	
4.1.10. Ability to integrate with Customer Support platforms.	C	
4.1.11. Ability to integrate with Data Warehouses and Lakehouses.	C	
4.1.12. Ability to integrate with Business Intelligence platforms.	C	
4.1.13. Ability to integrate with enterprise Identity Providers.	C	
4.1.14. Ability to integrate with enterprise API Gateways.	C	
4.1.15. Ability to integrate with event streaming platforms.	C	
4.1.16. Ability to integrate with airline operational systems including	C	

Flight Status, Check-in, Boarding, Refunds, and Ancillary systems.		
--	--	--

4.2 Data Connectivity Requirements

Requirement	Mixpanel Response	Mixpanel Note
4.2.1. Ability to ingest streaming data.	C	
4.2.2. Ability to ingest batch data.	C	
4.2.3. Ability to consume REST APIs.	C	
4.2.4. Ability to consume GraphQL APIs.	NC	Mixpanel works with HTTP API
4.2.5. Ability to consume SOAP services where applicable.	NC	Mixpanel works with HTTP API
4.2.6. Ability to support Webhooks.	C	
4.2.7. Ability to support Kafka or equivalent streaming technologies.	C	
4.2.8. Ability to support Message Queues.	NC	Mixpanel works with HTTP API
4.2.9. Ability to support secure FTP and batch file ingestion.	NC	Mixpanel works with HTTP API
4.2.10. Ability to support real-time customer profile synchronization.	C	
4.2.11. Ability to activate customer segments to downstream applications.	C	
4.2.12. Ability to export analytics data into enterprise data platforms.	C	
4.2.13. Ability to support Reverse ETL.	C	
4.2.14. Ability to support Warehouse-Native Analytics.	NC	Mixpanel is a SaaS platform
4.2.15. Ability to support configurable API throttling and rate limiting.	C	
4.2.16. Ability to support schema evolution without disrupting integrations.	C	
4.2.17. Ability to provide retry mechanisms for failed integrations.	C	

4.3 API & SDK Requirements

Requirement	Mixpanel Response	Mixpanel Note
4.3.1. Ability to provide RESTful APIs for administration and analytics.	C	
4.3.2. Ability to provide SDKs for Android, iOS, Web, Flutter, React Native, and other major application frameworks.	C	
4.3.3. Ability to support Server-Side SDKs.	C	
4.3.4. Ability to support configurable SDK behaviour.	C	
4.3.5. Ability to support remote SDK configuration.	C	
4.3.6. Ability to support SDK version management.	C	
4.3.7. Ability to provide backward compatibility across SDK versions.	C	
4.3.8. Ability to support API versioning.	C	
4.3.9. Ability to provide comprehensive API documentation.	C	
4.3.10. Ability to provide SDK implementation guides.	C	
4.3.11. Ability to support API authentication using OAuth, JWT, API Keys, and Mutual TLS.	C	
4.3.12. Ability to monitor SDK health.	C	
4.3.13. Ability to provide SDK diagnostics.	C	

4.4 Data Governance for Integrations

The solution should support:

Requirement	Mixpanel Response	Mixpanel Note
4.4.1. Ability to validate incoming data.	C	
4.4.2. Ability to reject malformed payloads.	C	
4.4.3. Ability to detect duplicate events.	C	INSERT_ID
4.4.4. Ability to perform schema validation.	C	
4.4.5. Ability to maintain integration audit logs.	C	
4.4.6. Ability to monitor integration health.	C	
4.4.7. Ability to provide end-to-end traceability.	C	
4.4.8. Ability to maintain historical synchronization records.	C	
4.4.9. Ability to support configurable retry policies.	C	
4.4.10. Ability to support integration monitoring dashboards.	C	

4.5 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
4.5.1. Demonstrate CRM integration.	C	
4.5.2. Demonstrate CDP integration.	C	
4.5.3. Demonstrate Data Warehouse integration.	C	
4.5.4. Demonstrate Marketing Automation integration.	C	
4.5.5. Demonstrate Loyalty platform integration.	C	
4.5.6. Demonstrate streaming event ingestion.	C	
4.5.7. Demonstrate API-based customer profile synchronization.	C	
4.5.8. Demonstrate reverse ETL.	C	
4.5.9. Demonstrate warehouse-native analytics.	NC	Mixpanel is SaaS
4.5.10. Demonstrate SDK deployment.	C	
4.5.11. Demonstrate integration monitoring dashboard.	C	

Provide

Supported integration mechanisms.

Mixpanel Response: REST APIs (Ingestion, Import, Export, Query, Engage/Profiles), Webhooks, native AWS Kafka streaming ingestion, Cohort Sync to downstream marketing/ad platforms, Reverse ETL, Data Pipelines (continuous export to warehouse/cloud storage), and Warehouse Connectors (sync data from Snowflake/BigQuery into Mixpanel), plus client and server-side SDKs.

Native connectors available.

Mixpanel Response: Marketing/engagement — Braze, Google Ads, Facebook Ads, Salesforce Marketing Cloud, Segment, mParticle, Mailchimp, Marketo, Iterable, OneSignal, Intercom, CleverTap, and others. Data destinations — BigQuery, Snowflake, Databricks (private beta), Redshift Spectrum, AWS S3, Google Cloud Storage, Azure Blob Storage. Please refer to <https://mixpanel.com/partners/integrations> for more information.

API throughput.

Mixpanel Response: Import API sustains roughly 2GB/min of uncompressed JSON (~30,000 events/second) per project; platform-wide peak throughput has hit 2 million events/second.

API latency.

Mixpanel Response: Events are typically available for querying within seconds of hitting Mixpanel's ingestion servers (near real-time).

Maximum concurrent API calls supported.

Mixpanel Response: No maximum for ingestion API. Query API allows 5 concurrent queries and 60/hour per project; Raw Data Export API allows 100 concurrent queries, 60/hour, and 3/second.

SDKs supported.

Mixpanel Response: JavaScript, iOS (Swift/Objective-C), Android (Kotlin/Java), React Native, Flutter, Unity, Python, Node.js, Java, Go, Ruby, and PHP

Supported programming languages.

Mixpanel Response: Same set as the SDK list above

Supported streaming platforms.

Mixpanel Response: Native AWS Kafka integration for real-time event ingestion (serverless, roughly a 5-minute setup). Mixpanel has HTTP API for event ingestion.

Supported databases.

Mixpanel Response: BigQuery, Snowflake, Databricks (private beta), and Redshift Spectrum for Data Pipelines (exporting out); Snowflake and BigQuery are also supported as Warehouse Connector sources (syncing in).

Supported cloud platforms.

Mixpanel Response: integrations span all three major clouds — AWS (S3, Redshift), Azure (Blob Storage), and GCP (BigQuery, GCS).

Largest enterprise deployment.

Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

Airline customer references.

Mixpanel Response: Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Integration architecture documentation.

Mixpanel Response: Available via developer.mixpanel.com (API reference architecture) and docs.mixpanel.com (Data Pipelines, Warehouse Connectors, SDK guides); a formal architecture diagram package can typically be provided through an SE/solutions-architect engagement.

Sample API documentation.

Mixpanel Response: developer.mixpanel.com covers the Ingestion, Import, Export, Query, Engage/Profiles, and Lexicon Schemas APIs with reference examples.

Sample SDK documentation.

Mixpanel Response: Please refer to <https://docs.mixpanel.com/docs/tracking-methods/sdks/javascript>

Integration implementation methodology.

Mixpanel Response: Refer to <https://docs.mixpanel.com/guides/strategic-playbooks/onboarding-playbook> for an example. Details will be discussed with Mixpanel account team.

5. Platform Administration & Governance

5.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
5.1.1. Ability to provide centralized administration across all environments, business units, and digital properties.	C	
5.1.2. Ability to support multi-tenant administration with logical segregation of applications, departments, and business functions.	C	
5.1.3. Ability to create, modify, disable, and manage users through centralized administration.	C	
5.1.4. Ability to provide Role-Based Access Control (RBAC) with configurable permission sets.	C	
5.1.5. Ability to support Attribute-Based Access Control (ABAC) where required.	C	
5.1.6. Ability to integrate with enterprise Identity Providers using SAML 2.0, OAuth 2.0, OpenID Connect (OIDC), and Microsoft Active Directory.	C	
5.1.7. Ability to support Single Sign-On (SSO) across all administrative consoles.	C	
5.1.8. Ability to support maker-checker or approval workflows for configuration changes.	C	
5.1.9. Ability to maintain complete audit trails of administrative activities.	C	
5.1.10. Ability to support version control for analytics configurations, event taxonomies, dashboards, reports, calculated metrics, and integrations.	C	
5.1.11. Ability to support rollback to previous configurations without service disruption.	C	
5.1.12. Ability to maintain environment-specific configurations for Development, QA, UAT, Pre-Production, Disaster Recovery, and Production.	C	
5.1.13. Ability to support delegated administration for different	C	

business units.		
5.1.14. Ability to provide centralized license and subscription management.	C	
5.1.15. Ability to monitor platform utilization and license consumption.	C	
5.1.16. Ability to support enterprise governance policies and approval workflows.	C	
5.1.17. Ability to maintain administrative dashboards.	C	
5.1.18. Ability to support policy-based administration.	C	
5.1.19. Ability to automate administrative tasks using APIs.	C	
5.1.20. Ability to maintain historical configuration repositories.	C	
5.1.21. Ability to support scheduled configuration backups.	C	

5.2 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
5.2.1. Demonstrate centralized administration across multiple digital channels.	C	
5.2.2. Demonstrate role-based administration.	C	
5.2.3. Demonstrate Single Sign-On.	C	
5.2.4. Demonstrate configuration version control.	C	
5.2.5. Demonstrate rollback of an incorrect production configuration.	C	
5.2.6. Demonstrate delegated administration.	C	
5.2.7. Demonstrate audit logging for administrative actions.	C	
5.2.8. Demonstrate environment promotion from QA to Production.	C	
5.2.9. Demonstrate governance approval workflow.	C	
5.2.10. Demonstrate administrative usage reporting.	C	

Provide

Maximum supported users.

Mixpanel response: No limit

Maximum supported administrative roles.

Mixpanel response: No limit

Authentication mechanisms supported.

mixpanel

Mixpanel response: SSO, please refer to <https://docs.mixpanel.com/docs/access-security/single-sign-on>

Governance workflow capabilities.

Mixpanel Response: Event Approval model — new events and properties are hidden from other users by default until a designated admin reviews and either approves, keeps hidden, or drops them, with configurable notification recipients

Version control capabilities.

Mixpanel response: Please clarify as this is in the IndiGo code setup.

Configuration rollback capabilities.

Mixpanel response: Please clarify as this is in the IndiGo code setup.

Audit retention period.

Mixpanel response: Customizable from 2 years.

License management capabilities.

Mixpanel response: Organization-level roles (Owner, Admin, Billing Admin) manage plan and billing; Enterprise plans include unlimited seats (no per-seat licensing) with usage tracked by monthly event consumption.

Airline customer references.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Largest enterprise deployment.

Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

6. SDK & Implementation Requirements

6.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
6.1.1. Ability to provide native SDKs for Android, iOS, Web, Flutter, React Native, and future application frameworks.	C	
6.1.2. Ability to provide Server-Side SDKs.	C	
6.1.3. Ability to support lightweight SDK architecture with minimal impact on application performance.	C	
6.1.4. Ability to support asynchronous event collection.	C	
6.1.5. Ability to queue events during network failures.	C	

6.1.6. Ability to retry failed events automatically.	C	
6.1.7. Ability to support configurable event batching.	C	
6.1.8. Ability to support offline event storage and synchronization.	C	
6.1.9. Ability to remotely configure SDK behaviour without application redeployment.	C	
6.1.10. Ability to remotely enable or disable SDK functionality.	C	
6.1.11. Ability to support backward compatibility across SDK versions.	C	
6.1.12. Ability to support SDK version management.	C	
6.1.13. Ability to support feature flags within SDKs.	C	
6.1.14. Ability to isolate SDK failures from the host application.	C	
6.1.15. Ability to prevent SDK failures from crashing the application.	C	
6.1.16. Ability to support configurable timeouts.	C	
6.1.17. Ability to provide SDK diagnostics.	C	
6.1.18. Ability to monitor SDK performance.	C	
6.1.19. Ability to support remote kill switch functionality.	C	
6.1.20. Ability to provide implementation validation tools.	C	
6.1.21. Ability to support automated SDK testing.	C	
6.1.22. Ability to maintain comprehensive implementation documentation.	C	
6.1.23. Ability to provide migration utilities for SDK upgrades.	C	
6.1.24. Ability to provide install, uninstall, crashes information for Android and iOS.	C	

6.2 Implementation Requirements

Requirement	Mixpanel Response	Mixpanel Note
6.2.1. Ability to provide implementation methodology.	C	
6.2.2. Ability to provide event taxonomy design support.	C	
6.2.3. Ability to provide implementation accelerators.	C	
6.2.4. Ability to support phased rollout.	C	
6.2.5. Ability to support pilot deployments.	C	
6.2.6. Ability to support blue-green deployment strategies.	C	
6.2.7. Ability to support implementation validation.	C	

mixpanel

6.2.8. Ability to provide implementation health checks.	C	
6.2.9. Ability to support knowledge transfer.	C	
6.2.10. Ability to provide implementation best practices.	C	

6.3 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
6.3.1. Demonstrate SDK deployment.	C	
6.3.2. Demonstrate offline event synchronization.	C	
6.3.3. Demonstrate SDK remote configuration.	C	
6.3.4. Demonstrate remote kill switch.	C	
6.3.5. Demonstrate SDK upgrade.	C	
6.3.6. Demonstrate implementation validation.	C	
6.3.7. Demonstrate implementation monitoring.	C	
6.3.8. Demonstrate migration from existing SDK.	C	
6.3.9. Demonstrate SDK diagnostics.	C	
6.3.10. Demonstrate feature flag management.	C	

Provide

Supported SDK platforms.

Mixpanel Response: Android, iOS, Web, React Native, Flutter, and Unity as native client SDKs, plus server-side SDKs for Python, Node.js, Java, Go, Ruby, and PHP.

SDK size.

Mixpanel Response:

SDK	Size
JS	~17kb
Android	~400kb
iOS	~30mb
Flutter	~5mb

mixpanel

SDK latency.

Mixpanel Response: Mobile SDKs buffer events for up to 1 minute (or flush automatically when the app moves to background) to conserve battery and bandwidth, with a manual flush().

Offline storage capacity.

Mixpanel Response: Configurable, bounded by SDK defaults — flush batch size (max events per network request) is capped at 50, and the recommended maximum queue depth before an upload attempt is also under 50 messages. Please confirm your expected storage capacity.

Supported programming languages.

Mixpanel Response: Same set as the SDK platforms above.

SDK release frequency.

Mixpanel Response: SSDKs are actively maintained with public changelogs on GitHub (mixpanel-js, mixpanel-android, etc.), with releases shipped as fixes/features are ready rather than on a committed schedule.

Backward compatibility policy.

Mixpanel Response: SDKs follow semantic versioning with public changelogs, and deprecations get long advance notice rather than abrupt breaking changes.

Largest SDK deployment.

Mixpanel Response: SDK sizes are standardized.

Airline customer references.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Sample implementation documentation.

Mixpanel Response: Mixpanel provides comprehensive implementation documentation covering SDK installation, event instrumentation, sample tracking plans, identity management, implementation best practices, and migration guidance. Please refer to <https://docs.mixpanel.com> for developer documentation and implementation guides.

7. Data Management & Retention

7.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
7.1.1. Ability to manage structured and semi-structured analytics data.	C	
7.1.2. Ability to support configurable data retention policies.	C	
7.1.3. Ability to support configurable archival policies.	C	
7.1.4. Ability to support automated lifecycle management.	C	

7.1.5. Ability to support historical analytics.	C	
7.1.6. Ability to support point-in-time recovery.	C	
7.1.7. Ability to maintain data lineage.	PC	On Mixpanel roadmap
7.1.8. Ability to maintain metadata repositories.	PC	On Mixpanel roadmap
7.1.9. Ability to support enterprise data catalogues.	C	
7.1.10. Ability to support data versioning.	PC	Please clarify
7.1.11. Ability to support customer-specific retention requirements.	C	
7.1.12. Ability to support secure archival.	C	
7.1.13. Ability to support secure data deletion.	C	
7.1.14. Ability to maintain historical audit records.	C	
7.1.15. Ability to support warehouse-native analytics.	NC	Mixpanel is SaaS
7.1.16. Ability to support data export without vendor lock-in.	C	
7.1.17. Ability to support customer-owned storage where applicable.	NC	Mixpanel is SaaS

7.2 Data Retention Requirements

Requirement	Mixpanel Response	Mixpanel Note
7.2.2. Ability to disclose all primary and secondary hosting locations.	C	
7.2.3. Ability to disclose backup locations.	C	
7.2.4. Ability to support customer-selected hosting regions.	C	
7.2.5. Ability to document cross-border data transfers.	C	
7.2.6. Ability to comply with applicable data residency regulations.	C	
7.2.7. Ability to support regional disaster recovery.	C	
7.2.8. Ability to support sovereign cloud deployments where applicable.	C	
7.2.9. Ability to provide data residency reports.	C	
7.2.10. Ability to support customer-controlled encryption keys.	C	

7.3 Use Case Demonstration

Requirement	Mixpanel Response	Mixpanel Note
7.3.1. Demonstrate lifecycle management.	C	
7.3.2. Demonstrate data archival.	C	
7.3.3. Demonstrate historical analytics.	C	
7.3.4. Demonstrate India data residency.	C	
7.3.5. Demonstrate cross-region replication.	C	
7.3.6. Demonstrate secure deletion.	C	
7.3.7. Demonstrate warehouse-native analytics.	NC	Mixpanel is a SaaS product and does not allow for warehouse native analytics
7.3.8. Demonstrate metadata management.	C	
7.3.9. Demonstrate data lineage.	PC	On Mixpanel roadmap
7.3.10. Demonstrate customer-managed encryption keys.	NC	Mixpanel is a SaaS product and does not allow for customer managed encryption keys.

Provide

Supported hosting regions.

Mixpanel Response: Three data residency options, selected at project creation: United States (default), European Union, and India.

Primary data centre location.

Mixpanel Response: US residency → Google Cloud us-central1 (Iowa); EU residency → Google Cloud europe-west4 (Eemshaven, Netherlands); India residency → Google Cloud asia-south1 (Mumbai).

Disaster Recovery location.

Mixpanel Response: Mixpanel's production data is stored in Google Cloud Platform (GCP). Backup buckets exist across multiple GCP projects.

Backup strategy.

Mixpanel Response: Mixpanel uses a multi-tier backup strategy.

Retention policies.

Mixpanel Response: 2 years by default, can be customised for IndiGo.

Archival capabilities.

mixpanel

Mixpanel Response: Mixpanel does not natively archive data beyond its retention windows. Customers are strongly recommended to export data before retention windows expire.

Data export formats.

Mixpanel Response: CSV, JSONL, JSON.

Supported storage platforms.

Mixpanel Response: integrations span all three major clouds — AWS (S3, Redshift), Azure (Blob Storage), and GCP (BigQuery, GCS).

Largest deployment.

Mixpanel Response: Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

Airline customer references.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

8. Support, Operations & Managed Services

8.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
8.1.1. Dedicated Project Manager.	C	Mixpanel delivers enterprise engagements through a dedicated Account Manager (AM) and Customer Success Architect (CSA). The Account Manager serves as the strategic partner, responsible for commercial engagement, executive alignment, and long-term account success. The Customer Success Architect leads implementation, provides solution architecture and technical guidance, supports event taxonomy design, implementation best practices, and ongoing product adoption. Together, these
8.1.2. Dedicated Solution Architect.	C	
8.1.3. Dedicated Technical Account Manager.	C	
8.1.4. Dedicated Customer Success Manager.	C	

		roles fulfil the project management, solution architecture, technical advisory, and customer success responsibilities throughout the customer lifecycle. The roles described above are representative of Mixpanel's current customer delivery model and may evolve over time as our customer success organisation continues to scale.
8.1.5. 24x7 production support for Severity-1 incidents.	C	24x7 production support for Severity 1 incidents is available under applicable Enterprise Support Plans. Support coverage, response commitments, incident SLAs, and escalation processes are governed by the selected support plan and documented in the applicable Enterprise Support documentation, including the Mixpanel SLA.
8.1.6. Clearly defined Incident Response and Resolution SLAs.	C	
8.1.7. Named escalation matrix.	C	 Mixpanel_SLA_2026 (1).pdf
8.1.8. Quarterly Business Reviews.	C	Enterprise customers receive ongoing Customer Success engagement including Quarterly Business Reviews, platform health and adoption reviews, implementation guidance, event taxonomy advisory, administrator, developer and business user enablement, API and SDK implementation support, release and roadmap reviews, best practice recommendations, optimisation workshops, knowledge transfer, and ongoing adoption monitoring. RCA has associated SLAs as per the incident SLAs shared on Trust Center
8.1.9. Periodic platform health assessments.	C	
8.1.10. Analytics maturity assessments.	PC	
8.1.11. Performance optimization recommendations.	C	
8.1.12. Release planning and upgrade advisory.	C	
8.1.13. Root Cause Analysis (RCA) for critical incidents.	C	
8.1.14. Knowledge transfer to IndiGo teams.	C	
8.1.15. Administrator training.	C	
8.1.16. Developer training.	C	
8.1.17. Business user training.	C	
8.1.18. API and SDK implementation support.	C	
8.1.19. Event taxonomy advisory.	C	
8.1.20. Product roadmap reviews.	C	
8.1.21. Adoption monitoring.	C	

Center

8.1.22. Best practice recommendations.	C	
8.1.23. Proactive monitoring and issue prevention.	PC	Mixpanel provides the capabilities, tooling, and guidance that enable customers to proactively monitor platform usage, configure alerts, identify optimization opportunities, and minimize implementation issues. Ongoing operational monitoring remains the responsibility of the customer.
8.1.24. Support through Email, Portal, Telephone, and Collaboration platforms.	C	Enterprise support is provided through the Mixpanel Support Portal, email, and collaboration channels where applicable under the selected Enterprise Support Plan. Available support channels are defined by the customer's support entitlement.
8.1.25. Service reporting and governance meetings.	C	Mixpanel provides regular customer success and business review meetings appropriate to the customer's engagement and Enterprise Support Plan. These reviews typically cover platform adoption, support performance, product updates, roadmap discussions, and agreed action items. Clarification requested: Please confirm whether "service reporting and governance meetings" refers to periodic customer success/business reviews or to a formal IT service governance framework with defined reporting and governance cadence.
8.1.26. Transition and exit support at contract termination.	C	Mixpanel can support customer offboarding through documented data export capabilities and transition assistance in accordance with the applicable subscription agreement and selected Enterprise Support Plan.

8.2 Use Case Demonstration

Requirement	Mixpanel Response
8.2.1. Demonstrate implementation governance.	Mixpanel follows a structured implementation governance model with a dedicated project team, regular project status meetings, milestone tracking, risk and issue management, executive steering checkpoints, and defined success criteria throughout implementation.
8.2.3. Demonstrate quarterly business review.	Quarterly Business Reviews (QBRs) are conducted to review business outcomes, platform adoption, product roadmap updates, KPI performance, optimization opportunities, support metrics, and upcoming priorities.
8.2.4. Demonstrate incident management lifecycle.	Incidents are managed through a defined lifecycle covering detection, triage, severity classification, escalation, communication, resolution, root cause analysis (where applicable), and preventive actions in accordance with Mixpanel's support processes.
8.2.5. Demonstrate RCA preparation.	For critical incidents, Mixpanel provides Root Cause Analysis (RCA) documentation summarizing the incident timeline, root cause, customer impact, remediation actions, and preventive measures.
8.2.6. Demonstrate knowledge transfer programme.	Knowledge transfer includes administrator enablement, developer implementation guidance, business user training, documentation, office hours, and ongoing best-practice workshops to ensure long-term customer self-sufficiency.
8.2.7. Demonstrate analytics maturity assessment.	Mixpanel works with customers to assess analytics maturity across instrumentation, governance, reporting, experimentation, activation, and organizational adoption, providing recommendations for continuous improvement.

8.2.8. Demonstrate optimization workshop.	Mixpanel conducts optimization onboarding workshops focused on product adoption, customer journeys, funnel performance, retention, experimentation opportunities, and analytics best practices based on customer objectives.
8.2.9. Demonstrate service reporting.	Regular service reviews include support performance, SLA adherence, product adoption, platform usage, incident trends, roadmap updates, and agreed action items.
8.2.10. Demonstrate transition support methodology.	Mixpanel provides structured migration support for customers transitioning from incumbent analytics platforms. The engagement begins with discovery and assessment of the existing analytics implementation, including event taxonomy, tracking architecture, reporting requirements, integrations, and historical data considerations. Based on this assessment, Mixpanel works with the customer to define a phased migration plan, validate instrumentation, establish data governance best practices, conduct implementation QA, and execute production rollout with hypercare support. Migration methodology and timelines are tailored to the complexity of the existing implementation and customer requirements.

Provide

Implementation timeline.

Mixpanel Response: There is no one-size-fits-all implementation approach. Implementation timelines are determined based on factors including the customer's business objectives, use cases, event taxonomy, instrumentation maturity, integration landscape, data engineering requirements, and any migration effort from an incumbent analytics platform. Following a discovery and solution design phase, Mixpanel works with the customer to define a phased implementation plan, milestones, and rollout approach aligned to project complexity and business priorities. For more information:

<https://docs.mixpanel.com/guides/strategic-playbooks/onboarding-playbook>

Team structure.

Mixpanel Response: The following reflects Mixpanel's current customer delivery model. Typical implementation teams include an Account Manager, Customer Success Architect/ Implementation Engineer, Technical Support, and Product Specialists, with executive sponsorship available for strategic engagements.

Support locations.

Mixpanel Response: Mixpanel provides global customer support through distributed teams across North America, Europe, and Asia-Pacific.

Support coverage.

Mixpanel Response: Support coverage, response commitments, and service levels are defined by the selected Enterprise Support Plan. Mixpanel offers Premium and Premium Plus support options, including 24x7 coverage where applicable. Please refer to the Enterprise Support Plans documentation for detailed support entitlements and SLAs:

<https://docs.mixpanel.com/docs/response-times#support-offerings-&-first-response-times>

Escalation matrix.

Mixpanel Response: A defined escalation process is available for Enterprise customers, including Customer Success, Technical Support, Engineering, and Executive escalation paths where appropriate.

Incident SLAs.

Mixpanel Response: Incident response and resolution targets are governed by the applicable Enterprise Support Agreement based on incident severity. Detailed SLA commitments can be provided during contracting.

Training methodology.

Mixpanel response: Enablement combines SME-led onboarding sessions, implementation workshops, business user training, Mixpanel University resources, product documentation, and ongoing office hours. (combination of both in-person and virtual sessions)

Product release frequency.

Mixpanel Response: Mixpanel continuously delivers product enhancements through a cloud-native SaaS model, with new features, improvements, and fixes released on a regular basis without requiring customer-managed upgrades.

Customer Success model.

Mixpanel Response: Enterprise customers are supported by a dedicated Customer Success Architect who partners with implementation teams to drive adoption, business outcomes, executive engagement, roadmap alignment, and ongoing optimisation.

Managed Services scope.

Mixpanel Response: Managed services are tailored to the customer's selected onboarding and support plan and may include implementation guidance, onboarding, solution architecture, event taxonomy design, instrumentation best practices, technical support, product enablement, adoption reviews, optimization workshops, roadmap reviews, and strategic advisory. The exact scope is defined during the implementation and contracting process based on the customer's requirements.

Post-Go-Live support model.

Mixpanel Response: Following production deployment, customers transition into an ongoing support model that includes hypercare, dedicated Customer Success, technical support, regular business reviews, adoption monitoring, optimisation recommendations, and roadmap discussions.

Largest airline implementation.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Airline customer references.

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. Additional customer references can be provided during the evaluation process, subject to customer consent and applicable confidentiality obligations.

Customer satisfaction metrics (CSAT/NPS).

Mixpanel Response: Mixpanel operates a Voice of the Customer (VoC) program that measures customer satisfaction across the customer lifecycle. Customer Satisfaction (CSAT) is captured following support interactions and key onboarding and implementation milestones, while Net Promoter Score (NPS) is measured through recurring relationship surveys across the customer base. Together, these provide both point-in-time service quality insights and an ongoing measure of customer loyalty.

Support satisfaction is measured on resolved support cases and is used as a key performance indicator for the Support organization and an input into continuous service improvement. Detractor and low-satisfaction responses follow a closed-loop process, with follow-up by Customer Success or Support leadership, root cause analysis, and escalation of systemic issues to the appropriate Product and Operations teams.

Aggregate customer satisfaction metrics and program methodology can be shared under NDA during the RFP presentation and as part of the evaluation process. Enterprise customers also receive ongoing account health reviews and customer success reporting through regular business reviews with their assigned Customer Success Architect.

9. Vendor References, Travel Expertise & Proven Scale

9.1 Capability Requirements

Requirement	Mixpanel Response	Mixpanel Note
9.1.1. Demonstrated experience in migration from Adobe analytics stack to other marketing and analytics platforms.	C	
9.1.2. Demonstrated experience in airline analytics stack implementation and platform migration.	C	
9.1.3. Demonstrated experience in managing Adobe Experience Cloud and other clickstream analytics platforms.	C	
9.1.4. Demonstrated experience in supporting and managing data lakes for clickstream analytics.	C	
9.1.4. Demonstrated success supporting enterprise-scale experimentation and personalization programs.	C	
9.1.5. Demonstrated experience within airline, OTA, hospitality, travel, mobility or large-scale e-commerce industries.	C	
9.1.6. Demonstrated ability to support high-volume D2C businesses.	C	

9.2 Use Case Demonstration

Requirement	Mixpanel Response
9.2.1. Provide top 5 enterprise customers.	Representative enterprise customers include Swiggy, Nykaa, CRED, BharatPe, TFE Hotels, and a leading Indian digital streaming platform. Additional enterprise references can be shared subject to customer approval and applicable confidentiality obligations.
9.2.2. Provide airline, OTA, travel or hospitality references.	Mixpanel has experience supporting digital analytics initiatives in the airline and travel industry, including Lufthansa, Air Premia, TFE Hotels, and another leading Asia-Pacific carrier (reference available subject to customer approval).
9.2.3. Provide measurable business outcomes delivered.	Air Premia uses Mixpanel to better understand customer behaviour across the digital booking journey, optimise user experience, and improve booking conversion through behavioural analytics. - Air Premia (20%+ booking conversion improvement) - Nykaa (Adobe migration, self-service, reduced warehouse costs, 15% analyst productivity gain)
9.2.4. Provide average implementation timelines.	Implementation timelines are determined collaboratively following discovery and solution design, taking into account the customer's use cases, event taxonomy, instrumentation maturity, integration landscape, data engineering requirements, and any migration effort from an incumbent analytics platform. Mixpanel follows a phased implementation approach aligned to customer priorities and project complexity. https://docs.mixpanel.com/guides/strategic-playbooks/onboarding-playbook
9.2.5. Provide largest deployment supported.	Mixpanel powers analytics at internet scale for some of the world's largest digital businesses, including a leading global mobility platform and a global quick-service restaurant (QSR) brand, each processing billions of events and supporting millions of users. Customer names can be shared under appropriate confidentiality arrangements where permitted.

9.2.6. Provide annual personalization volume delivered.	Mixpanel provides the analytics platform and customer segmentation capabilities that support enterprise personalization initiatives. Personalization execution volumes depend on the customer's downstream activation platforms and are therefore not reported as a standard Mixpanel metric.
9.2.7. Provide annual experimentation volume delivered.	Mixpanel supports experimentation measurement and analytics through integrations with leading experimentation platforms. Experimentation volume is customer-specific and is therefore not reported as a standard platform metric.
9.2.8. Provide at least 3 customer references available for reference checks.	Customer references can be coordinated during the subsequent evaluation rounds and are subject to customer approval, applicable confidentiality obligations, and reference availability.
9.2.9. Describe implementation approach, onboarding methodology and customer success model	https://docs.mixpanel.com/guides/strategic-playbooks/onboarding-playbook Mixpanel follows a proven four-phase implementation methodology designed to move customers from project kickoff to sustained, self-service analytics adoption. The implementation approach is tailored to each customer's business objectives, use cases, event taxonomy, instrumentation maturity, integration landscape, data engineering requirements, and any migration effort from an incumbent analytics platform. <i>Phase 1 – Align</i> The engagement begins by defining the business outcomes and success metrics the implementation is intended to achieve, rather than starting with dashboards. During this phase, Mixpanel works with the customer to identify key stakeholders, prioritise business use cases, assess the existing analytics implementation, review the event taxonomy and data architecture, and establish the implementation plan, governance model, success criteria, and rollout approach. <i>Phase 2 – Build</i>

	Mixpanel implements data collection using the customer's preferred approach, including SDKs, APIs, Customer Data Platforms (CDPs), data warehouses, or other supported integrations. Event instrumentation is validated through structured QA to ensure data quality and consistency. In parallel, Mixpanel collaborates with customer teams to refine the event taxonomy, establish governance best practices, configure business context (KPIs, metric definitions, product terminology), and develop dashboards, reports, and key analytical workflows aligned to business priorities. <i>Phase 3 – Launch</i> Following successful validation, the solution is deployed to production and business users are enabled through role-based training and onboarding. Mixpanel works closely with customer teams during the initial rollout through regular project checkpoints, office hours, and implementation support to ensure successful adoption and operational readiness. <i>Phase 4 – Grow</i> Following go-live, Mixpanel partners with customers to expand adoption across additional business teams and use cases. Ongoing engagement includes optimisation workshops, governance reviews, enablement programmes, executive business reviews, roadmap discussions, and continuous refinement of analytics capabilities to maximise business value and return on investment. <i>Roles and Mutual Accountability</i> Successful implementations are delivered through a collaborative partnership. Mixpanel provides a dedicated Customer Success Manager, Solutions Architect/Implementation Specialist (as applicable), Technical Support, and executive sponsorship for strategic engagements. Customers typically provide an executive sponsor, technical owner, programme manager, data engineering resources, and business stakeholders responsible for analytics governance
--	---

	and adoption. <i>Ongoing Partnership</i> Beyond onboarding and implementation, Mixpanel provides ongoing Customer Success engagement, regular business reviews, product enablement, Mixpanel Academy training and certification resources, strategic advisory, and SLA-backed technical support through the selected Enterprise Support Plan. <i>Measuring Success</i> Success criteria are jointly defined during the Align phase and reviewed throughout the engagement. Progress is measured across both platform adoption metrics (such as active users, self-service analytics adoption, report creation, and training completion) and business outcome metrics aligned to the customer's objectives, including improvements in conversion, engagement, experimentation velocity, operational efficiency, and other agreed business KPIs.
--	---

Vendor Capability and Information solicited.

Vendors to provide their organization capabilities & services specifically in Airlines. Below mentioned Vendor Qualification requirement are not exhaustive. IndiGo shall have the right to include other terms and conditions during proposal evaluation & contract finalization with successful vendor(s)

i. Non-Commercial

- **Corporate profile:**

Mixpanel Response: Founded in 2009, Mixpanel is a leading digital analytics platform that helps organizations understand customer behaviour, measure product and business performance, and make data-driven decisions. The platform enables product, marketing, engineering, and digital teams to analyse customer journeys, optimise digital experiences, improve conversion, and accelerate experimentation through self-service analytics, AI-powered insights, and enterprise-grade governance. Mixpanel serves more than 20,000 organizations globally, including approximately 14% of the Fortune 500, across industries including technology, financial services, retail, e-commerce, travel, hospitality, media, telecommunications, and healthcare.

- **Years in business**

Mixpanel Response: Founded in 2009 with over 17 years of experience delivering enterprise digital analytics solutions.

- **Global presence**

Mixpanel Response: Mixpanel serves customers globally across North America, Europe, Asia-Pacific & Japan, Latin America, and the Middle East, with distributed teams supporting enterprise customers worldwide.

- **Airline industry experience**

Mixpanel Response: Mixpanel has experience supporting digital analytics initiatives in the airline and travel industry, including Lufthansa, Air Premia, and another leading Asia-Pacific carrier (reference available subject to customer approval). Mixpanel also supports customers across hospitality, travel, mobility, and large-scale digital commerce.

- **Similar enterprise implementations**

Mixpanel Response: Mixpanel has delivered enterprise-scale implementations across financial services, retail, travel, hospitality, media, mobility, and digital commerce, supporting organizations processing billions of annual customer interactions and enabling self-service analytics across cross-functional business teams.

- **Client references**

Mixpanel Response: Representative enterprise customers include Swiggy, Nykaa, CRED, BharatPe, TFE Hotels, and a leading Indian digital streaming platform. Additional customer references can be coordinated during the evaluation process, subject to customer approval and applicable confidentiality obligations.

- **Financial stability:**

Mixpanel Response: As a privately held, venture-backed company, Mixpanel does not disclose detailed financial statements to third parties. This is standard practice for companies at our stage. Like most growth-stage SaaS businesses, we invest significantly in scaling the platform and the business, which is exactly what our investors back us to do. Sharing raw financial data without that context can create a misleading picture that does not accurately reflect the strength of our position.

To address your requirements, we have prepared the following:

1. Financial Attestation Letter — Signed by our VP of Finance, this confirms that Mixpanel is well-capitalised, has no material liabilities or insolvency risk, and maintains sufficient resources to meet its obligations to customers. It also sets out our investor backing, including our \$200 million Series C investment from Bain Capital Tech Opportunities.

2. Delaware Certificate of Good Standing — An official certificate from the Delaware Secretary of State confirming Mixpanel's corporate standing, current filing status, and payment of franchise taxes.  Mixpanel_Inc.-DE-Certificate_of_Good_Standing_-_3).pdf

- **Product certifications**

Mixpanel Response: Mixpanel maintains internationally recognised security and compliance certifications including SOC 2 Type II and ISO 27001. Additional compliance documentation is available through the Mixpanel Trust Center.

- **Security certifications**

Mixpanel Response: Security documentation, certifications, audit reports, penetration testing summaries, and compliance information are available through the Mixpanel Trust Center, subject to applicable access controls and confidentiality requirements.

- **Support organization structure**

Mixpanel Response: The following reflects Mixpanel's current customer delivery model. Enterprise customers are supported through a cross-functional delivery model comprising Customer Success, Account Management, Technical Support, Product, and Engineering teams (depending on requirement). Strategic accounts also receive executive sponsorship to support business reviews, roadmap discussions, and long-term success. Support services are delivered in accordance with the customer's selected Enterprise Support Plan, with Premium and Premium Plus support options available.

ii. Product Roadmap

Vendor should provide a three-year roadmap covering:

- Planned product enhancements
- Artificial Intelligence capabilities
- Analytics innovation
- Integration strategy
- Scalability improvements
- Backward compatibility
- Long-term support commitment

Vendor should identify roadmap items that are currently available, planned, or under development.

Mixpanel Response: Mixpanel maintains a continuous product innovation roadmap spanning artificial intelligence, analytics capabilities, enterprise governance, integrations, scalability, and platform enhancements. The roadmap includes features that are currently available, planned, and under development, many of which have been identified throughout this response.

As roadmap information is confidential and subject to further development and change, detailed roadmap plans are presented as part of the solution presentation and executive product discussion. During the presentation, Mixpanel will review the roadmap relevant to IndiGo's requirements, including planned product enhancements, AI capabilities, analytics innovation, integration strategy, scalability improvements, backward compatibility, and long-term product support commitments.

iii. Project Governance and Methodology – Please share details.

Mixpanel Response: Mixpanel follows a structured, sprint-based onboarding methodology with clear governance at every stage:

- Iterative Sprints: Plan → Implement → Launch, each 1–3 weeks, starting with top 2–3 use cases.
- Defined Roles: Executive Sponsor, Team Leads, Mixpanel Champions, Data Owner, Analyst/PM, Engineer, and Data Governor — each with documented responsibilities.
- Data Governance Tools: Lexicon (data dictionary), Event Approval, Data Standards, Data Views, and Data Volume Monitoring ensure ongoing data quality.
- Production Readiness: Staged QA → production deployment with a 24–48 hour monitoring window before org-wide rollout.
- Adoption Framework: Champion-led rollout with defined KPIs, launch communications, and monthly data reviews to sustain usage.

iv. High Level Implementation Plan –

Mixpanel Response: Mixpanel follows a proven four-phase implementation methodology designed to move customers from project kickoff to sustained, self-service analytics adoption. The implementation approach is tailored to each customer's business objectives, use cases, event taxonomy, instrumentation maturity, integration landscape, data engineering requirements, and any migration effort from an incumbent analytics platform.

Phase 1 – Align

The engagement begins by defining the business outcomes and success metrics the implementation is intended to achieve, rather than starting with dashboards. During this phase, Mixpanel works with the customer to identify key stakeholders, prioritise business use cases, assess the existing analytics implementation, review the event taxonomy and data architecture, and establish the implementation plan, governance model, success criteria, and rollout approach.

Phase 2 – Build

Mixpanel implements data collection using the customer's preferred approach, including SDKs, APIs, Customer Data Platforms (CDPs), data warehouses, or other supported integrations. Event instrumentation is validated through structured QA to ensure data quality and consistency. In parallel, Mixpanel collaborates with customer teams to refine the event taxonomy, establish governance best practices, configure business context (KPIs, metric definitions, product terminology), and develop dashboards, reports, and key analytical workflows aligned to business priorities.

Phase 3 – Launch

Following successful validation, the solution is deployed to production and business users are enabled through role-based training and onboarding. Mixpanel works closely with customer teams during the initial rollout through regular project checkpoints, office hours, and implementation support to ensure successful adoption and operational readiness.

Phase 4 – Grow

Following go-live, Mixpanel partners with customers to expand adoption across additional business teams and use cases. Ongoing engagement includes optimisation workshops, governance reviews, enablement programmes, executive business reviews, roadmap discussions, and continuous refinement of analytics capabilities to maximise business value and return on investment.

Roles and Mutual Accountability

Successful implementations are delivered through a collaborative partnership. Mixpanel provides a dedicated Account Manager, Customer Success Architect/SME (as applicable as per chosen onboarding plan), Technical Support, and executive sponsorship for strategic engagements. Customers typically provide an executive sponsor, technical owner, programme manager, data engineering resources, and business stakeholders responsible for analytics governance and adoption.

Ongoing Partnership

Beyond onboarding & enablement, Mixpanel provides ongoing Customer Success engagement, regular business reviews, product enablement, Mixpanel University training and certification resources and SLA-backed technical support through the selected Enterprise Support Plan.

Measuring Success

Success criteria are jointly defined during the Align phase and reviewed throughout the engagement. Progress is measured across both platform adoption metrics (such as active users, self-service analytics adoption, report creation, and training completion) and business outcome metrics aligned to the customer's objectives, including improvements in conversion, engagement, experimentation velocity, operational efficiency, and other agreed business KPIs.
