Executive Summary

> I am happy to extend our strategic partnership for IndiGo's journey of customer centric digital transformation, Its my personal commitment that applying our AI driven accelerators, proven excellence in Application support, Seamless delivery methods and global talent pool strategy will help IndiGo achieve its AI First production support.

ANANTH CHANDRAMOULI,
Executive Vice President &
Managing Director, India BU

01 A disruptive rebuild for a zero-friction, AI-powered travel experience — transforming how 100 million passengers plan, book, and fly.

02 We are ready to bring in an industrialize, scalable AI based factory model which will support multiple apps and multiple websites under a common governance and standard process

03 We will contribute to Indigo's goal towards their Accessibility, sustainability and usability

04 Business Insightful Services (BIS) is a Data Driven Approach that aligns IT with Business Resulting in Superior Business Outcomes

05 Transforming customer experience IndiGo App Reimagined

Company Confidential © Capgemini 2026. All rights reserved.

Our Value Proposition for IndiGo

Customer Experience Transformation Partner

We have transformed customer and employee experience for many of our clients leveraging latest design concepts like AI First, Hyper Personalization. We can help you re-imagine the Direct Channels

Company Confidential © Capgemini 2026. All rights reserved.

How do we Deliver the Promise

1 Continuous Improvements

- Lower disruption
- Lower cost of support
- Improve Application stability
- Proactive Incident Reduction
- Reduce MTTR

2 Agentic Observability

- Proactive Issue Detection
- Near real-time Issue Resolution
- Predictive Analytics

3 Business Insightful Services

- Monitor & Improve Application parameter impacting Business KPI like

4 Scalable Delivery

- Capability to deliver end-to-end AMS and transformation services
- Model, Method and ability to manage increased complexity and scale effectively

Company Confidential © Capgemini 2026. All rights reserved.

02

Summary of Ask and Solution

Company Confidential © Capgemini 2026. All rights reserved.

Our proposal to fuel your growth ambitions

We bring in dynamic, scalable, cost-effective delivery model with cutting edge asset for continuous improvements and leverage AI / Gen AI for AI first AMS delivery

YOUR CHALLENGES

- Improved Production Stability and Availability
- Improve Service Reliability: Faster Incident Resolution to lower disruption
- Proactive Incident Prevention
- Enhanced Transparency and Stakeholder Communication
- Operational Efficiency: Reduce manual intervention in triage and RCA processes
- Automate repetitive tasks to free up skilled resources for strategic work
- Predictive & Preventive Capabilities

WE PROPOSE TO

- Leverage Capgemini ADMNext framework and field-tested Service delivery method to deliver AI-First ADM services
- Deploy our Assets (AI/GenAI/Agentic AI) to make service deliver more efficient and effective
- Implement Continuous Improvements to stabilize the landscape, reduce disruption to users improving user experience.
- We leverage our ESOAR methodology and tools to Eliminate common tickets, Standardize resolutions, Automate and Robotize for faster resolution
- Leverage our Business Insightful Services to ensure the business KPIs like booking reliability are met and exceeded

VALUE WE BRING

- Our **experience** and **expertise** to deliver large scale AMS programs managing critical application **– we are a safe pair of hands**
- **Scalable, cost-optimized**, and **transparent** delivery models engineered to enhance ROI.
- Capitalizing on **cutting-edge assets** and strategic thought leadership to propel **continuous innovation**
- **ESOAR** methodology for improving user experience
- AI First Approach in delivering the service
- Smar KPIs to ensure business objectives are met

Company Confidential © Capgemini 2026. All rights reserved.

Three Components of Our Solution

Automate – Agent enabled ITSM

- Deploy combination of Capgemini Assets and new Agents on ServiceNow Platform
- Delivery a roadmap for automation

Application Support – Direct Channel

- Agent Enabled Application support
- Include L2, Monitoring and minor enhancements

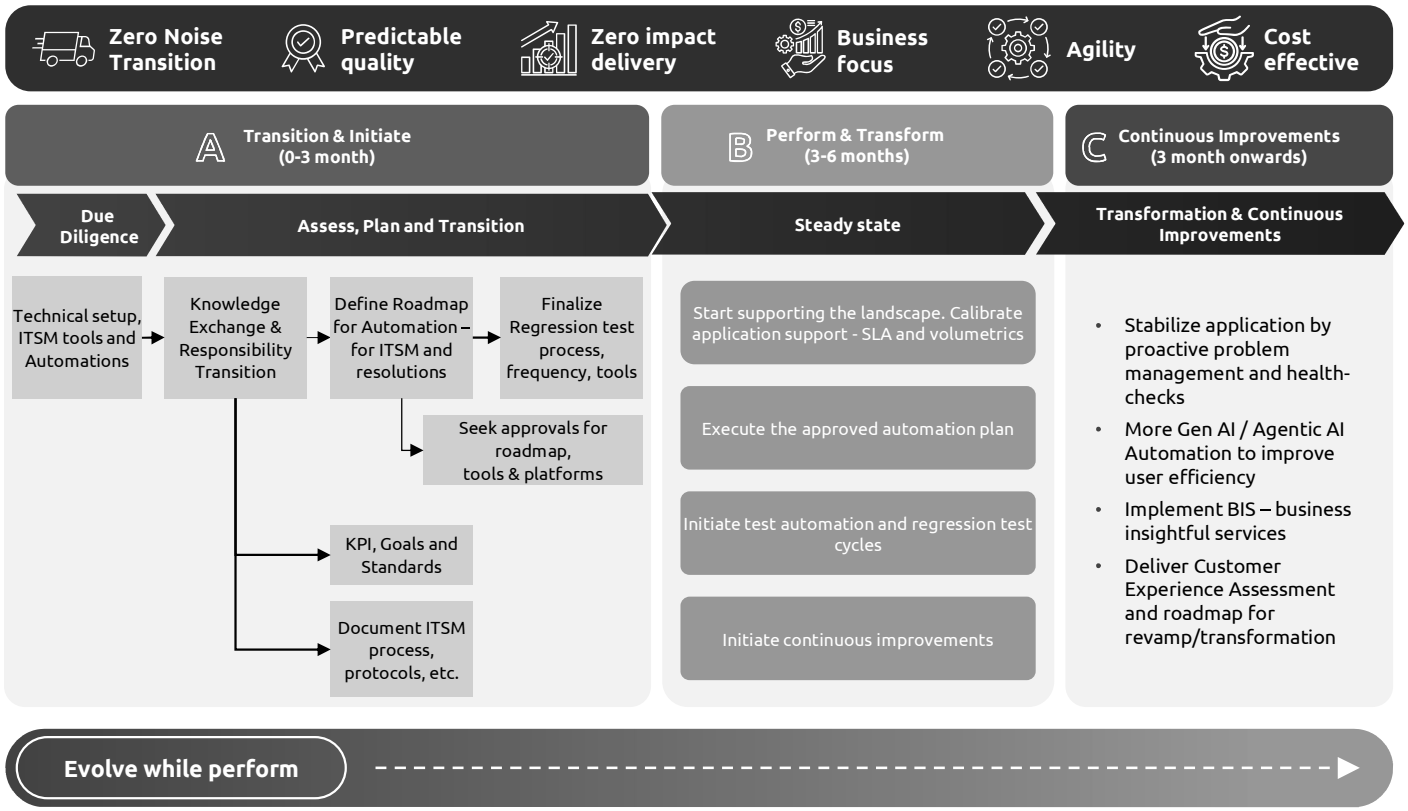

Regression Testing

- Capacity for regression testing and test automation
- Capacity for Performance Testing
- Include continued regression suite automation

Company Confidential © Capgemini 2026. All rights reserved.

Plan on a page – Delivery Approach

Our solution for implementing a AI first AMS service as well as testing services: Initiation, Execution and Transform, and Continuous Improvement

A Capgemini will work with IndiGo and its vendors to take over application support. We will also understand the current ITSM landscape and Automations

B We will take over support and calibrate the SLA/KPI.

We will also discuss and define overall AI transformation roadmap – agree on build / reuse approach, complete evaluation of reusable tools or finalize the Agentic platforms

Define the regression test approach and process, tools, frequency, KPIs and how to leverage the testing capacity

C Continuous Improvement, more Agentic automations, and ongoing regression testing will be implemented.

Company Confidential © Capgemini 2026. All rights reserved.

03

Solution Outline

Company Confidential © Capgemini 2026. All rights reserved.

Our understanding of Scope

Service duration

- 3 month of initial handover
- 33 months of run service

Application Scope

- Direct channel website and mobile app
- Integration/Interface Monitoring
- Minor Enhancements
- Tech-stack: React Native, Adobe AEM + React, API integration, .Net services

Service hours

- 18X7 IST in-person
- 24X7 On-call for P1+P2 tickets
- 24X7 L1.5 and Monitoring

Service language

- English

Service locations

- India: Governance, support & operations

Service Level

- Response Time, Resolution Time
- Automation Uptime, RCA creation

ITSM System ("Ticket Tool")

- ServiceNow, Jira
- Monitoring tools: Datadog and others already implemented

Service Scope

- Application monitoring services for the applications in scope
- L2 support services
- Orchestrate with infra, product vendors and other support teams
- Incident & Problem Management
- Preventative & Corrective Maintenance
- Access management
- Support Deployments
- Small CRs/minor enhancements (effort < 40hrs per change)
- Service Request Management
- Support DR exercises, regulatory and internal audits
- Continuous Improvements
- ITSM Process Automation leveraging Agentic AI
- Regression testing and test automation based on capacity
- Support version upgrades leveraging enhancement capacity

Service baseline (volumes)

- Ticket volume per month: 765 (546 Alerts + 290 Incidents)
- Minor enhancements: 300 hours/month
- 350 hour per month Test automation & regression test

Out of scope

- Service Desk (Level 1 Support)
- Remote functionality of interfaces (e.g. SAP backend, integration/middleware)
- New Module Implementations
- Major projects
- Infrastructure Management, License Management
- Product bugs
- Performance testing

Company Confidential © Capgemini 2026. All rights reserved.

Combined Team Structure Across three solution pillars

Program Governance

- Delivery Executive
- Account Executive
- Program Director
- Program Sponsor

Service Delivery Manager

Automation Implementation Team

- ServiceNow Architect / Automation Lead
- ServiceNow Business Analyst
- ServiceNow Developer
- Test Analysts

Application Support Team

Monitoring and L1.5 Resolver Team

Observability & Resolver Agents

L1.5 Monitoring and resolver Team

L2 Support Team

ITSM Automation Agents

Support Team members

Enhancement Capacity
Capacity from L2 Team

Regression Testing Team

- Test Lead
- Tester

- Automation CoE
- Technology CoE
- Customer Experience CoE
- ADM CoE
- Quality Engineering CoE

Assets, Accelerators, Best Practices

- Indigo Academy
- Innovation Cell
- Tools and Agentic and AI/ML automations
- Smart KPIs and SLA reporting
- Continuous Improvements

Company Confidential © Capgemini 2026. All rights reserved.

04

Delivering Agentic Automation for ITSM Process

Company Confidential © Capgemini 2026. All rights reserved.

Two Options to Deliver ITSM Automation – AI/Agentic

We envision two options to deliver the ITSM and Observability Automation. Option 1: is to setup the automations leveraging your ServiceNow environment. Option 2: is to leverage our ready to use automations in IndiGo environment. We have detailed out Option 1 and have included this in pricing.

1

Build ITSM and Observability Automation on ServiceNow

We have a ServiceNow Automation Center of Excellence. The experts from the team would assess current environment and create automation roadmap on ServiceNow – leveraging reusable features and agents to deliver the use cases

2

Configure Reusable Capgemini Suite of Automations for IndiGo

We have invested in creating tools, assets and automations which have been deployed across hundreds of our clients. Considering the data security constrains, we propose to install the relevant automations in your environment. This option is not currently costed as part of the proposal

Company Confidential © Capgemini 2026. All rights reserved.

Build ITSM and Observability Automation on ServiceNow

Company Confidential © Capgemini 2026. All rights reserved.

Our Understanding of your Objectives

Indigo Requirement

- **End-to-end automation across the ITSM process.**
- **Enable predictive prevention and anomaly detection**
- **Enable proactive monitoring and prevention**
- **Structured proactive problem management**
- **Self healing capabilities**
- **Advance analytics**

Objectives

Automation maturity assessment

Automation roadmap

Define a project plan and automation roadmap incl. technical & functional requirements

We create the robust, foundation and roadmap for ServiceNow at Indigo

Company Confidential © Capgemini 2026. All rights reserved.

Creating Automation Roadmap and Delivery Leveraging Capgemini Automation Experience and Expertise

Our Services

Assessment
Assess and define the future ServiceNow platform setup, incl. technology, governance, roadmap & business case

TOM, process, architecture, Automation and AI
Assess current state, workshops on operating model & ServiceNow process design, joint sessions on architecture & CSDM, and develop automation and AI use cases

Roadmap & governance
Define dependencies, develop multi-year plan, joint workshops for 4-week work cycles, use best practices to estimate effort and resources

Business case
Perform cost & volume analysis, workshops to quantify direct benefits, scenario-based business case calculation, and prepare decision packages

Organizational change management
Conduct stakeholder analysis, high-level change impact assessment, co-create change & transformation concept

Implementation approach
ServiceNow best-practice site, delivery model & governance aligned to Indigo frameworks, implementation strategy

Value-add for Indigo

A **transformation approach** beyond tooling incl. TOM, process, architecture & AI

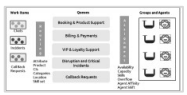

A **decision-ready roadmap**, aligned project governance model & work-package structure ready to use

A quantified, **defensible business** case built on **direct financial impact**

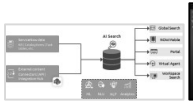

Organizational readiness & stakeholder alignment to enable adoption

Regulatory-ready design to enable audit-ready, secure, and compliant platform

Our Assets

Advanced Work Assignment (AWA)

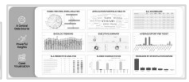

Knowledge Management AI Search

AiOps

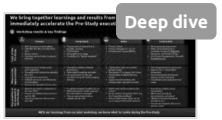

LEAP - Proactive Problem Management

Advance Reporting and Analytics

Our Accelerators

Indigo x Capgemini workshop results

IT Service Management capability model

Target operating model blueprint

ServiceNow process design workshop decks

Automation Journey: From foundation to Continuous Value

Predictable quality | **Zero impact delivery** | **Business focus** | **Agility** | **Cost effective**

Assessment and Automation Roadmap (0-2 month)

1. Scan

- **Method**: Assess and analyze current setup, processes, roles, and decision-making as well as regulatory constraints. Identify impact and derive scope for org. changes
- **Architecture:** Analyze and document the existing tool landscape, integrations, architecture, and dependencies as well as CMDB maturity, data quality, and configuration management practices
- **Processes**: Analyze existing business/IT processes and identify improvement potentials as well as deviations from ServiceNow best practices
- **Automation and AI**: Identify use cases based on SN capabilities in line with the Indigo governance framework & Automation strategy

Perform & Transform (3-7 months)

2. Focus

- **Method** : Define the operating model for impacted teams by outlining roles, processes and boards considering automation constraints
- **Architecture**: Establish architecture and data principles and define the target architecture, incl. platform setup, integration, security models in line with CSDM/CMDB model and licensing
- **Processes**: Conduct workshops across ServiceNow domains (incl. ITSM, ITOM)
- **Automation and AI**: Shape an ServiceNow vision and aligned to ServiceNow capabilities and prioritize and evaluate automation / AI use cases by value, technical feasibility

3. Define

- **Method** : Finalize blueprint with roles, responsibilities, governance and decision processes for stable operations
- **Architecture**: Deliver the target architecture, implementation concept incl. service-specific cross system interfaces, as well as the CSDM & CMDB data concept
- **Processes**: Define acceptance criteria and delivery increments, preparing implementation for modules and processes
- **Automation and AI**: Create an ServiceNow roadmap incl. data & process foundations by also considering the Indigo governance framework and Indigo automation /AI strategy
- **Hypercare and Handover to Indigo ServiceNow Run support:** Prepare HLD, LLD and maintenance documents for run team to takeover

Continuous Improvements (7+month onwards)

Innovate

- Gen AI / Agentic AI Automation
- Deliver Customer Experience Assessment and roadmap for revamp/transformation

Transition Out to ServiceNow Support team. If required, we can work out a support model.

Evolve while perform ▶

Outcomes

- Target Operating Model (TOM) blueprint incl. roles, boards, governance & processes
- Backlog with 4-weeks work packages for implementation
- Validated architecture, modules, and process design aligned with ServiceNow standards
- A ServiceNow AI vision and integrated roadmap incl. suitable and value-add AI use case

Company Confidential © Capgemini 2026. All rights reserved.

Use Case 1 – Advance Work Assignment – Faster & Automated Triaging

Process overview and added value

- Automates the review of tickets based on the details provided using predefined mapping rules, the team roster etc.
- Removes the need for different resolver groups to assess each ticket and handles validation and assignment to the correct resolver group reducing time by unrelated teams
- Easily scales and allows ongoing configuration

Technical insight into workings

- Route work items to queues using criteria defined by need or type
- Apply assignment rules to reach the most qualified agent
- Configure context and attributes for different customer service channels
- Monitor interactions, operations, tasks, and messaging with preconfigured dashboards

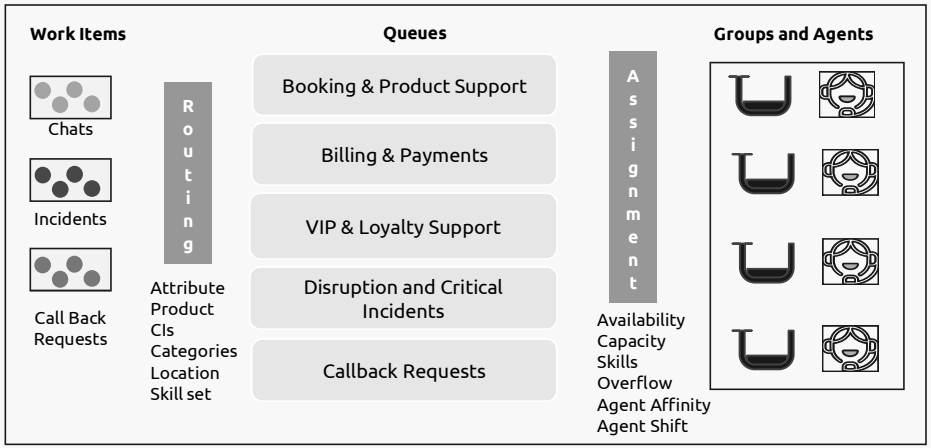

Asset Description

- AWA facilitates auto routing of tickets to Assignment Groups within the ticketing tool.
- Business rule will update the assignment group in service-now and change the status to “Assigned”. This will happen at near real time.
- Assignment group will pick up the tickets and resolve the ticket.
- IF the confidence score is less than threshold. It will go through existing Manual cycle for assignment and resolution.
- Ticket raised through Service desk and internal account team will flow through Intelligent Ticket Dispatcher

Outcomes & Value

- Faster Improve Customer service: Quicker assignment of tickets resulting in faster resolution of incidents and service requests
- Empower Team: Eliminate manual reviews enabling team to focus on high value tasks.
- Future readiness: Build a foundation with scale. Can be expended to meet future business needs.

Advanced Work Assignment (AWA)

Assumptions and Dependencies

- Indigo has ServiceNow Advanced Work Assignment (AWA) licensed and enabled for the required interaction types (e.g., chats, cases, callback requests).
- Any dependent capabilities (e.g., Omnichannel, Virtual Agent, CSM/FSM/ITSM work types) are already licensed or will be provisioned by the Indigo.
- Queue ownership, scope, and escalation expectations are agreed prior to configuration.
- No major redesign of Indigo business processes is assumed unless explicitly included.
- AWA assignment criteria (capacity, skills, availability, overflow, agent affinity) will leverage OOTB ServiceNow capabilities.
- Any highly custom or non-standard assignment logic is out of scope unless separately agreed.
- Accurate classification data on work items (product, category, priority, etc.) is available.
- Ongoing agent skill maintenance and capacity management remains Indigo-owned.
- Custom algorithm development beyond ServiceNow AWA is out of scope.

Company Confidential © Capgemini 2026. All rights reserved.

Use Case 2 - Assisted Resolution | AI Knowledge Search – MTTR Reduction

Technical insight into workings

- AI Search engine performs a keyword match function by utilising pre-built libraries to make the search meaningful.
- The analytical engine calculates the relevancy percentage for keyword match data and usage percentage based on past history.
- This generates the top 2 solutions with a relevancy percentage and a usage percentage for the picked solutions.
- Uses NLP (Natural Language Processing) technique to identify nearest matching solution for an incident from the KeDB,
- Interfaces with the Incident Management and Knowledge Management systems (within ServiceNow or external repository).
- Data from any KeDB already in use can be merged with AI search during the initial setup.

Asset Description

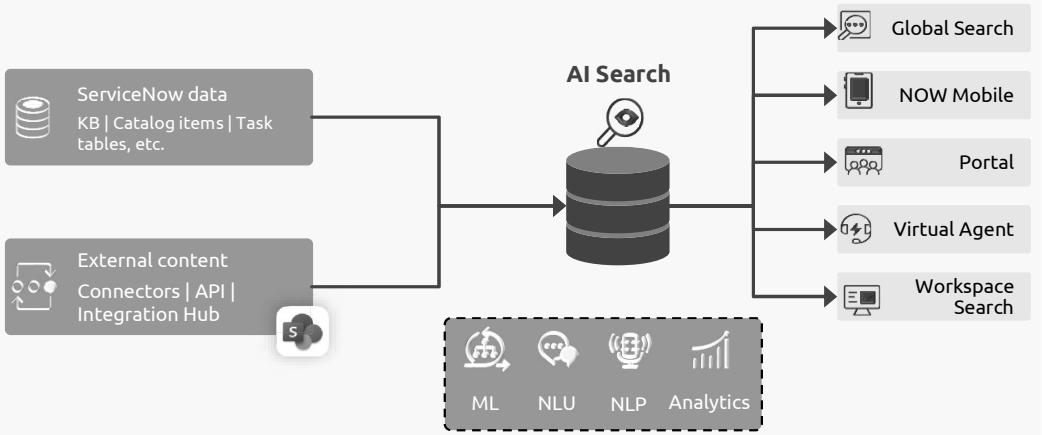

The search model includes the following features, ordered from most important (highest weight) to least important (lowest weight):

- Search term matches in the result's Title field (mapped from the short description of a Knowledge Base article or the name of a Catalog Item)
- Search term matches in the result's Content field (mapped from the text of a Knowledge Base article or the short description of a Catalog Item)
- Search term matches in the result's Keywords field (mapped from the source record's meta field)
- Freshness of the source record (when it was published or last updated)
- View Count and Use Count of the source record

Outcomes & Value

- **Faster turn around time (TAT):** With effective usage of KeDB, reduce TAT of repeated incidents by about 20% and increase in resource productivity
- **Consistency in ticket resolution:** With standard steps provided in a KO (Knowledge Object), consistency in resolving repetitive issues increase
- **Permanent Fixes:** Helps determine root cause of repetitive incidents and provide permanent fixes
- **Shorter Application KT duration:** new resources become productive faster after KT completion

Knowledge Management AI Search

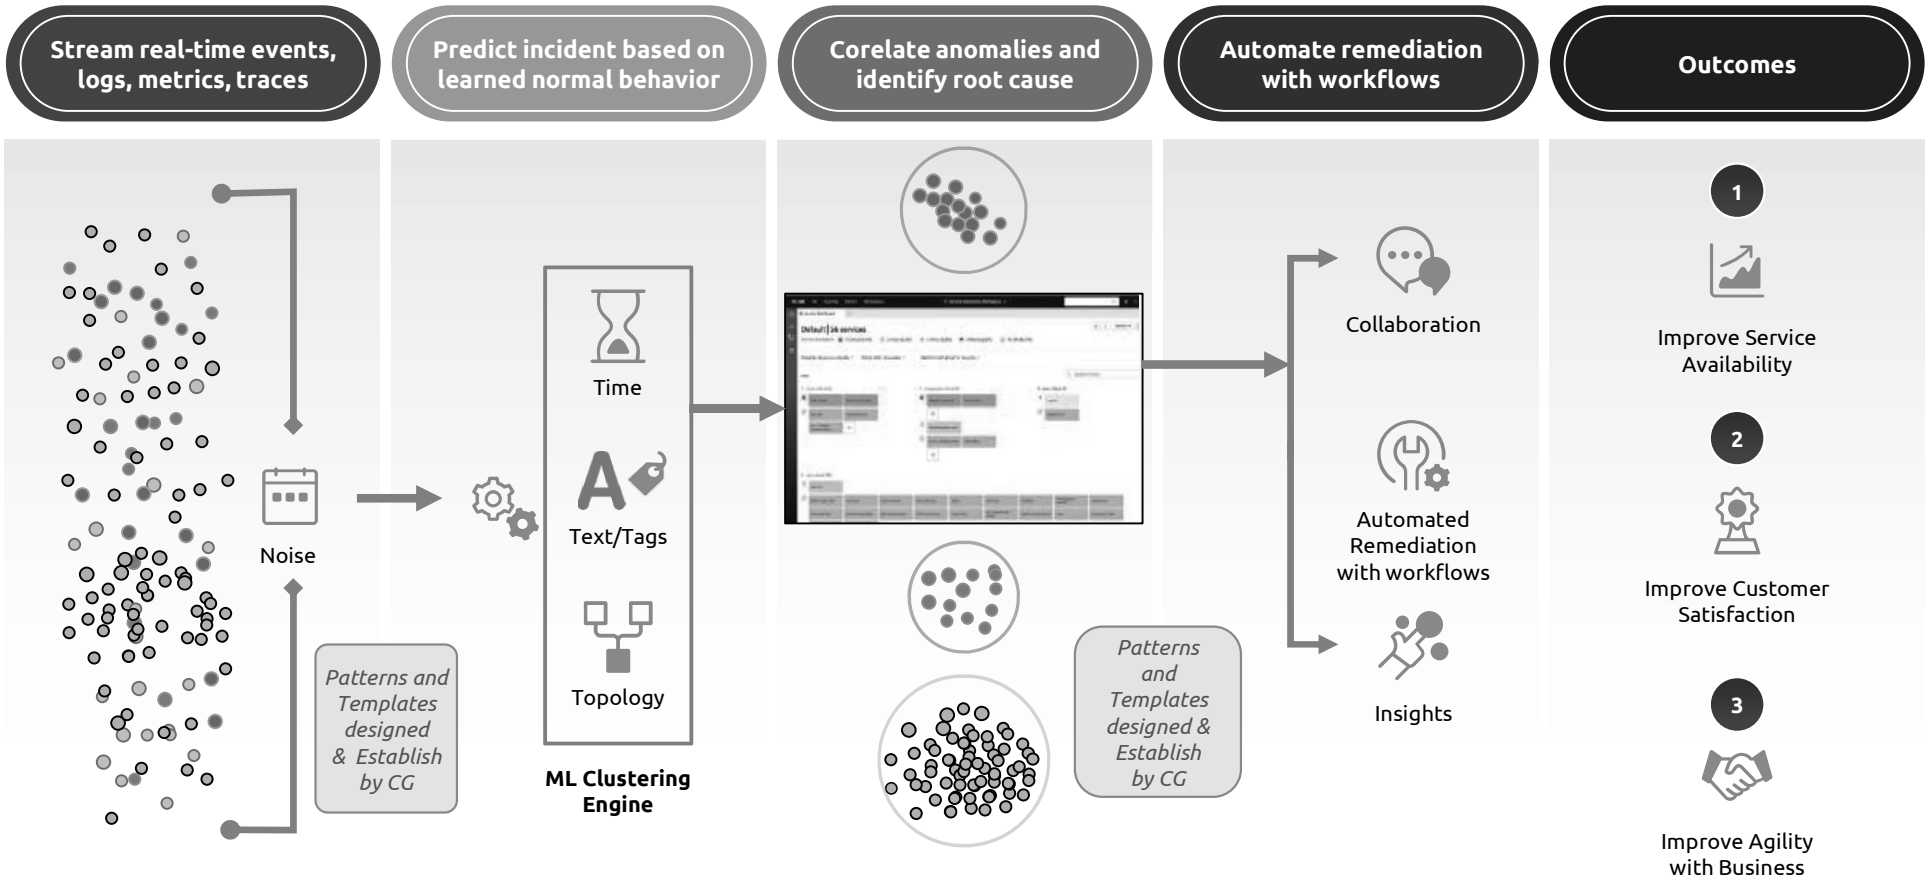

Assumptions and Dependencies

- Indigo has a licensed and enabled ServiceNow AI Search capability, including any required Now Assist / GenAI / Search Intelligence entitlements.
- AI Search is permitted to be enabled across Global Search, Portal, Workspace, Virtual Agent, and Now Mobile as applicable.
- Knowledge content is business-approved and suitable for AI-based search and summarization.
- No large-scale knowledge re-authoring or content remediation is considered.
- Expose stable APIs or connectors supported via IntegrationHub.
- Indigo confirms ownership, access rights, and legal permission to index and surface external content through ServiceNow.

Company Confidential © Capgemini 2026. All rights reserved.

Use Case 3 - Event Management – Predictive AIOPS

Company Confidential © Capgemini 2026. All rights reserved.

Use Case 4 - Proactive problem management & incident resolution – faster and accurate RCA

Process overview and added value

- **Problem records**: Detailed notes to figure out why something keeps breaking
- **Help articles**: Guides that anyone can search and read when they need help
- **Automated playbooks**: Scripts that fix problems automatically without human help

Technical insight into workings

- AIOps LEAP uses artificial intelligence (AI) to learn from past problems and create solutions. You can choose which AI provider to use—it's like choosing which brand of engine to power your car. Options include ServiceNow's own AI, Microsoft's AI, Google's AI, or Anthropic's AI

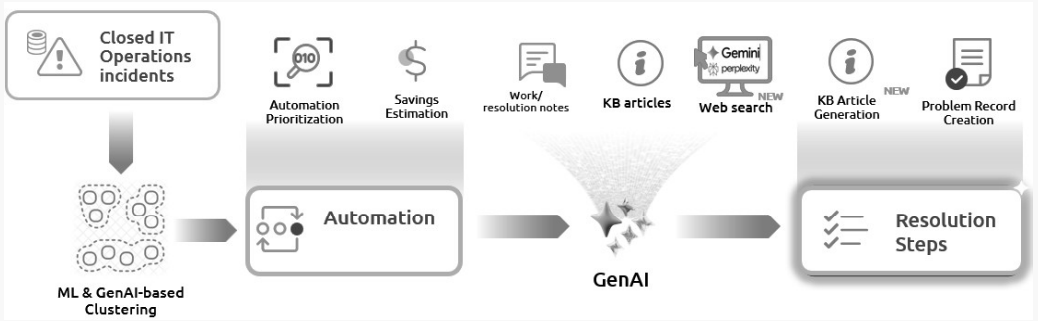

Asset Description

- AIOps LEAP is a smart tool that helps IT support teams fix computer problems faster. When the same issue keeps happening over and over.
- AIOps LEAP notices the pattern and creates a guide to fix it quickly.
- Critical: Problems that stop important business operations (like your email system going down)
- High: Serious problems that need quick attention
- Moderate: Important problems that can wait a bit
- Low: Minor problems that aren't urgent

Outcomes & Value

- Automated PM Process: Entire Problem Management Process is automated using LEAP
- Reduce Operations Cost: 15+% incident reduction y-o-y helps in reducing operations cost
- Handles the most important issues first: Shows you which problems cost the most time and money
- Makes automation easy: Turns repetitive tasks into automatic processes
- Helps junior staff do more: Even new team members can solve complex problems with clear guides
- Gets more work done: Your team can handle more tickets in less time

LEAP - Proactive Problem Management & Incident Resolution

Assumptions and Dependencies

- Indigo has the required ServiceNow AIOps / LEAP / GenAI (Now Assist) capabilities licensed and enabled.
- Any dependent modules (e.g., ITSM, Problem Management, Knowledge Management, Workflow Studio) are available and active.
- Closed IT Operations incidents are available in sufficient volume to enable meaningful ML-based clustering.
- Incident records contain adequate and relevant historical data.
- No large-scale remediation or enrichment of historical incident data is assumed unless explicitly agreed.
- GenAI-generated outputs (resolution steps, KB drafts) are expected to undergo human review and approval prior to activation or publication.
- Automation use cases will leverage ServiceNow OOTB automation and workflow capabilities.
- Complex remediation requiring custom scripts, external orchestration, or non-ServiceNow tooling is out of scope
- Availability of ITSM, AIOps (LEAP), Predictive Intelligence, and Now Assist GenAI, with Flow Designer and Workflow Studio to operationalize AI-driven problem remediation

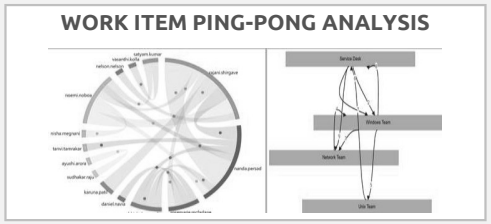

Company Confidential © Capgemini 2026. All rights reserved.

Reporting and Analytics Dashboards

A Central Data Source

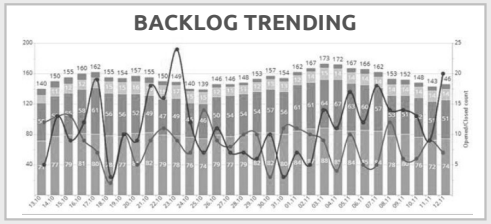

Powerful Insights

Great Visualisation

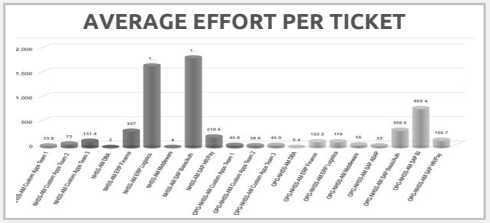

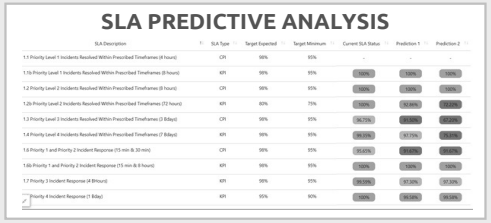

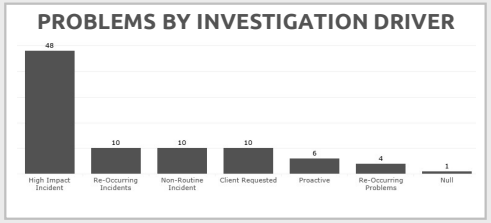

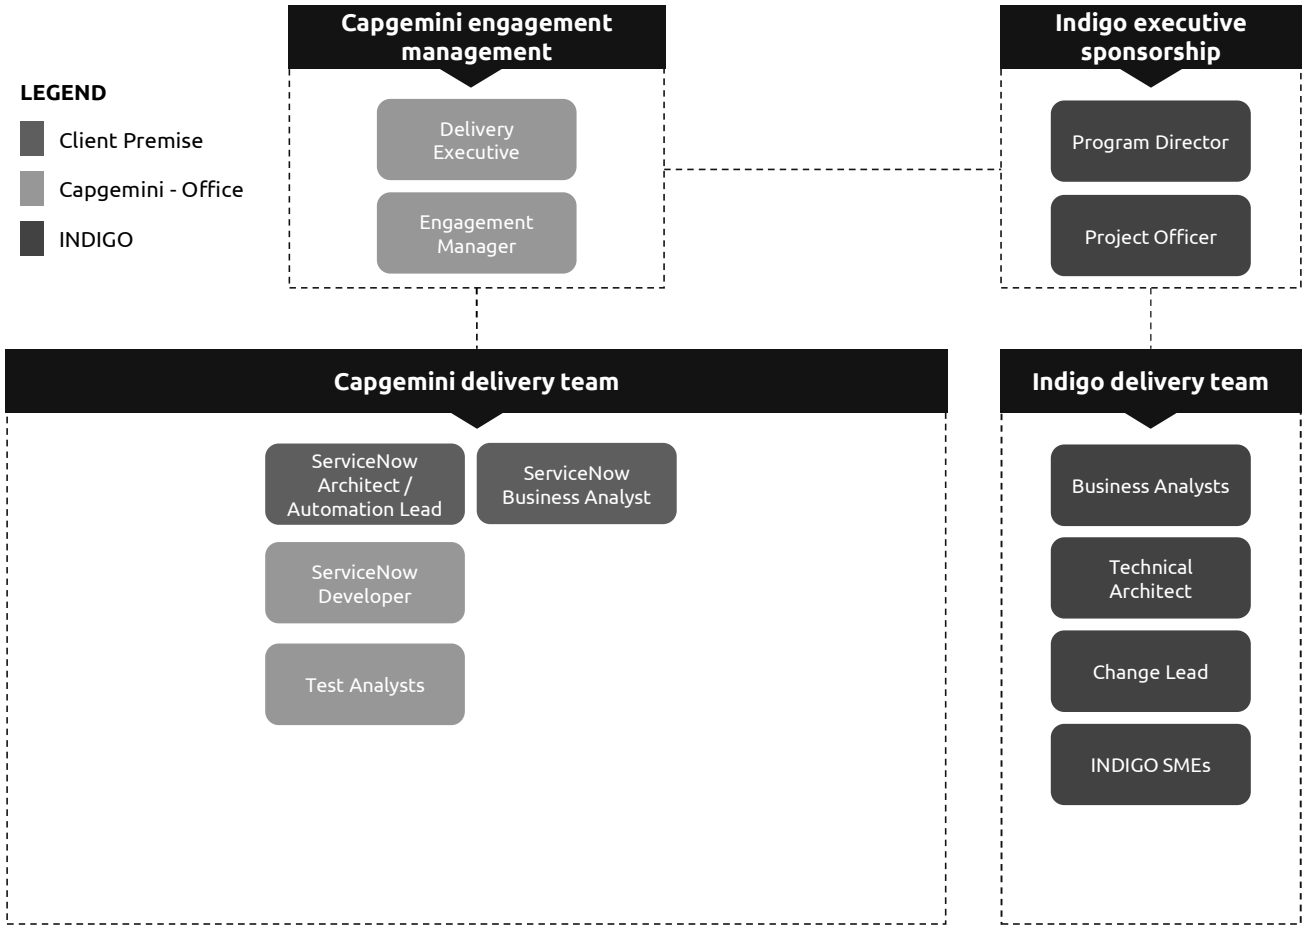

Company Confidential © Capgemini 2026. All rights reserved.

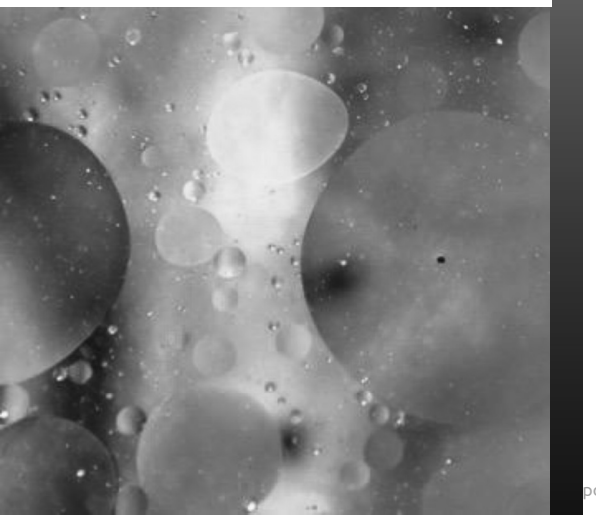

Delivery Team Structure

Company Confidential © Capgemini 2026. All rights reserved.

Out of Scope

- Development, modification, or remediation of external / third-party systems, APIs, or data sources outside the ServiceNow platform.
- Performance, availability, or defects in upstream or downstream systems used to trigger or consume automation.
- Remediation, cleansing, validation, or ongoing governance of CMDB, foundation data, service mapping, or discovery accuracy.
- Load, performance, penetration, security, or vulnerability testing, unless explicitly stated in scope.
- New automation use cases, complex custom code, AI/ML model development, or enhancements not explicitly documented in the agreed scope.
- Changes to automation logic, workflows, or business rules post sign-off will need to agreed with effort and timelines.

Capgemini Model for Agentic AI-powered ADM Services

Full View: CAPGEMINI AGENTIC AI-DRIVEN AUTOMATION PLATFORM

A modular, domain-adaptive, technology-agnostic AI framework mapped to Indigo Vision

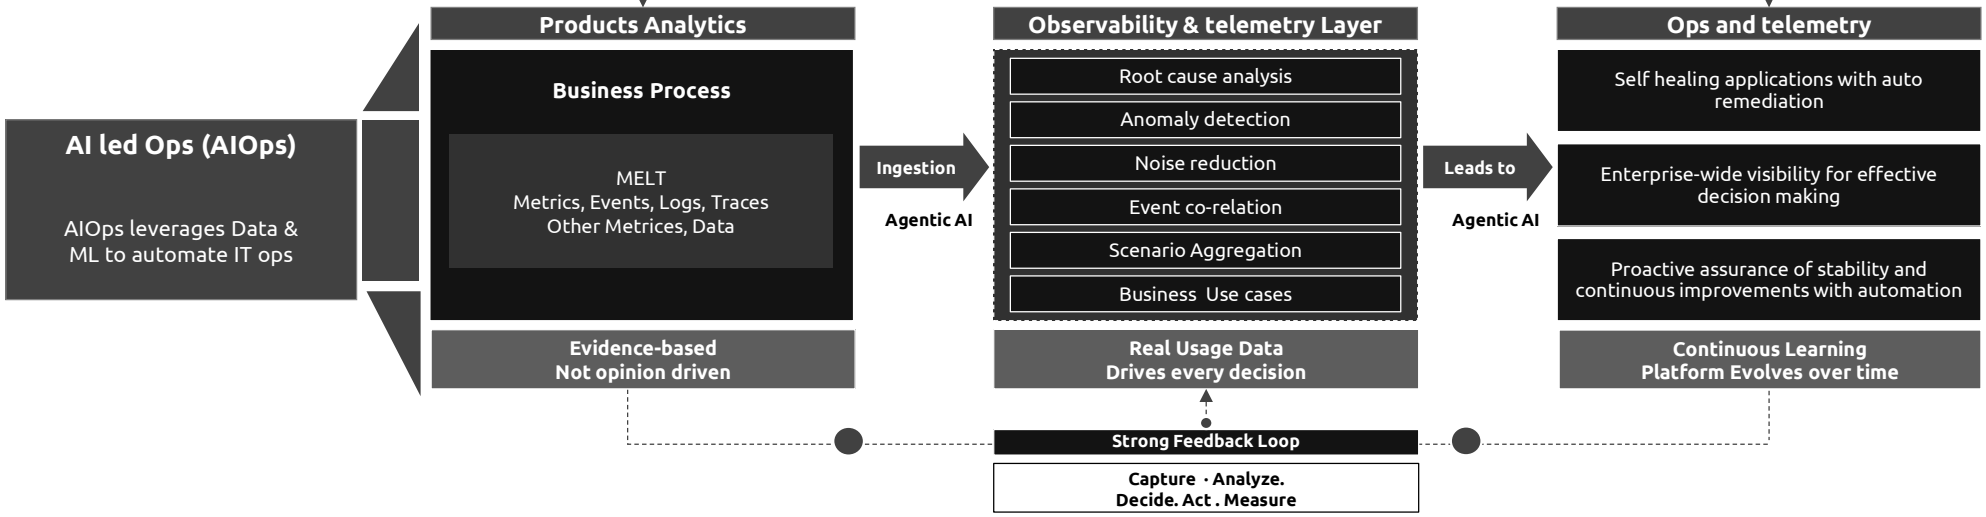

- **Open** (plug any LLM, channel, or backend; integrate with your existing tools)
- **Composable** (agents can be added, removed, tuned per function)
- **No-lock-in** (you own the logic, pipelines…)

Agentic Enabled AIOPS – Our Assets to Meet your Vision

AI-driven Observability and Predict Intelligence: We have included a detail assessment model to layout AIOPS strategy

A unified, cloud-native foundation embedding AI-driven observat **Agentic AI Platform Decisions & actions** resilient, future-ready ecosystems.

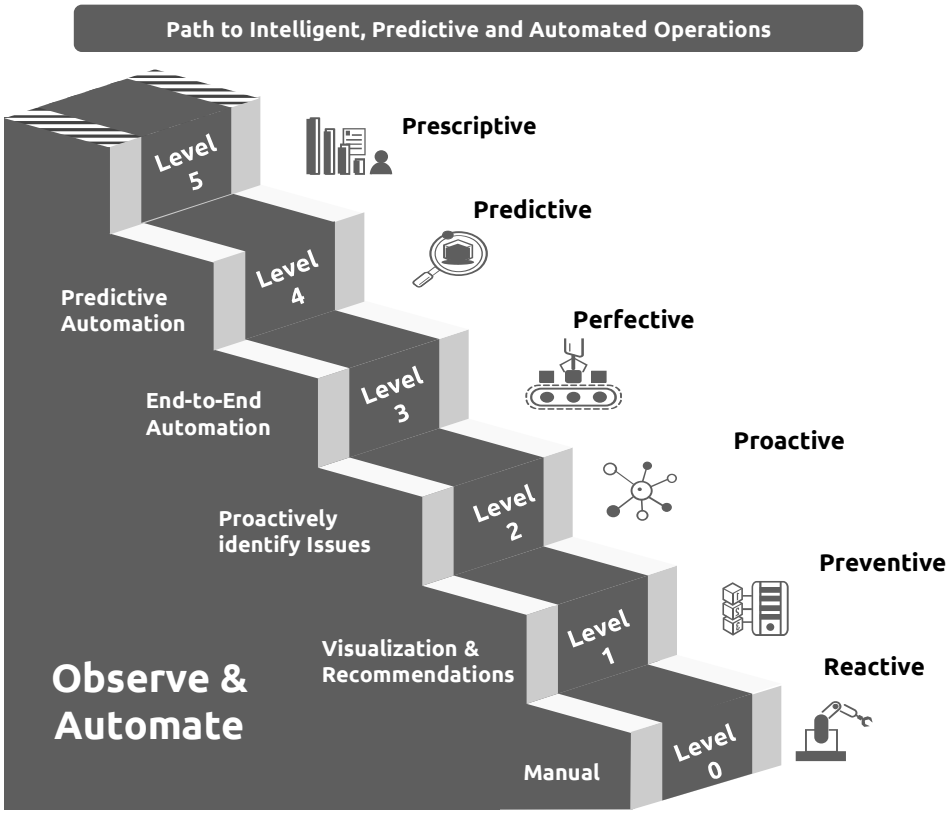

A smart foundation that supports,

- **> 99.99%** Availability and reliability of business
- Built-in **Trust, Compliance, and Auditability**
- **Predictable performance** under change and scale
- **Fewer incidents,** with **faster recovery**
- Continuously improving **resilience and performance**
- Auditable, responsible **AI-driven operations**
- **Lower operational risk** without vendor lock-in

Our Approach to AIOPS and Defining Modernization Roadmap

Our demonstrated AIOps approach enables increased maturity, reduced operating cost, accelerated delivery, and close business alignment.

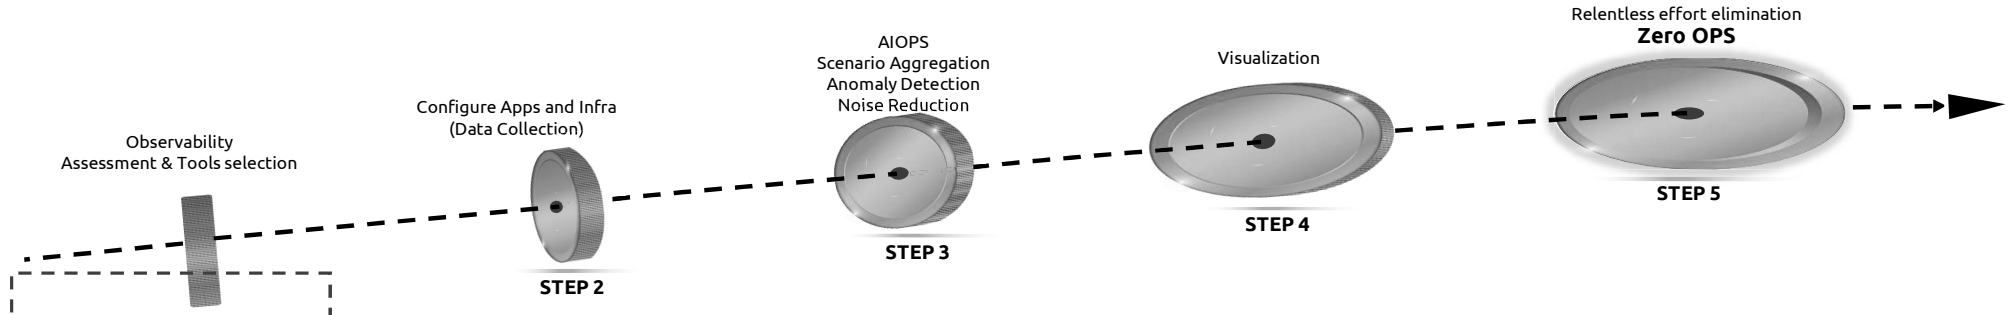

Foundational AIOps Building Blocks for End to End Visibility

Using Data to become Proactive & Predictive

IT Insights	Service Context	CX Insights	Business Performance Insights
AI-Based Insights *Reduce Noise & Detect Anomalies* ▪ Event de-duplication & grouping to provide actionable alerts ▪ Detect anomalies in near real-time	**End-to-End Service Visibility** ▪ Map the Business Services to the applications, infrastructure, network, and other components to provide full stack visibility		**Value Stream Performance & Visibility** ▪ Map the business flows and services ▪ Track and measure transactions across the value streams
AI-Based Recommendations *Enable Diagnosis, RCA, & Impact Analysis* ▪ Event correlation to find connections between alerts for diagnosis, RCA, and action identification ▪ Business impact analysis due to certain changes or events	**Real User Monitoring & Visibility** ▪ Capture and analyze each transaction by users of a website or mobile application		

Our AIOPS Implementation Approach

We have a matured Approach to deliver AIOPS for predictive and automated observability

	Day1	0-3 Months	3-9 Months	9-12 Months	12-18 Months	18+ Months
	Assessment	**Basic Monitoring**	**Advanced Monitoring**	**Dashboards**	**Generative AI Observability**	
Monitoring	Define goals & use cases Inventory data sources	Data Ingestion	Data Correlation and Segregation	Actionable Insight	Improved Observability	
		Monitoring of below ▪ Application Failures ▪ CPU and Memory Utilization ▪ Disk Space and File System ▪ Connectivity	▪ Event Correlation/Noise Reduction ▪ Dynamic Threshold /False Positives ▪ Anomaly Detection/Predictive Analysis ▪ Scenario Aggregation ▪ Root Cause Analysis (GenAI enabled) ▪ Alert Insights (GenAI enabled)	Real time view of Critical Business Processes for Client	▪ Data distribution, Model loss, Convergence patterns, Quality of generated outputs, Model accuracy, User interactions, and Costs	
	Assess Monitoring Tools	Automated ticket creation in ITSM	Zero Touch Auto Ticketing and Issue resolution	Create integrated dashboard		

We can start here

Assumptions and Dependencies

- Process refinement and maturity improvement is out of scope of this engagement.
- Automation will be delivered using ServiceNow out-of-the-box capabilities, with any custom development strictly limited to the agreed scope.
- All required ServiceNow licenses, plugins, and features will be provisioned and enabled by IndiGo prior to automation configuration.
  - Predictive AIOps requires ITOM Event Management with AIOps licensing, topology context via Discovery/Service Mapping, and Flow Designer–based automation, with IntegrationHub as needed for external remediation
  - Advanced reporting and analytics require Performance Analytics licensing to enable trend-based KPIs, historical insights, and predictive analysis beyond standard ServiceNow reporting
- IndiGo will provide timely access to all required systems, environments, tools, documentation, integrations, and data needed to deliver the agreed scope.
- Key business stakeholders and technical SMEs will be available as required for workshops, reviews, validations, and timely decision-making.
- Automation outcomes are dependent on the accuracy and health of CMDB, service mapping, discovery data, and configured processes; remediation of these remains IndiGo's responsibility. Any delays or deficiencies in CMDB readiness or service mapping may directly impact automation effectiveness and delivery timelines.
- All source and target systems must be accessible, stable, and integration-ready, with required APIs, MID Servers, agents, and connectors made available by IndiGo.
- Deliverables will be reviewed and formally accepted within 48 business hours; delays may result in re-planning or timeline impact.
- Initial effort estimates are indicative and subject to validation upon completion of the detailed assessment phase.
- Any changes to scope, complexity, or assumptions identified during assessment will result in a revised estimation aligned to the assessment findings.
- Ongoing operation, monitoring, and maintenance of implemented functionalities will be the responsibility of IndiGo's ServiceNow Run Support team.
- Any requirements or activities beyond the agreed scope will be managed through a formal Change Request process with impact on cost, timeline, and resources.

Company Confidential © Capgemini 2026. All rights reserved.

Case Study: Implementing Knowledge Agent for Major media and entertainment client

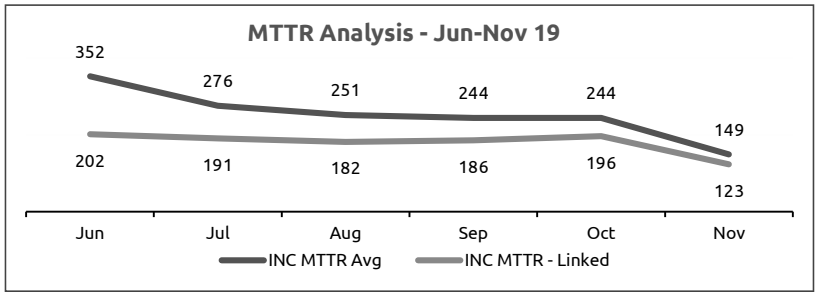

Delivery Challenges

Higher TAT
- Multiple Knowledge sources – Longer analysis time to identify solutions

Unstructured
- Multiple knowledge articles of varied versions – Duplicate knowledge articles

Automation
- Difficult to identify manual and repetitive steps for automation

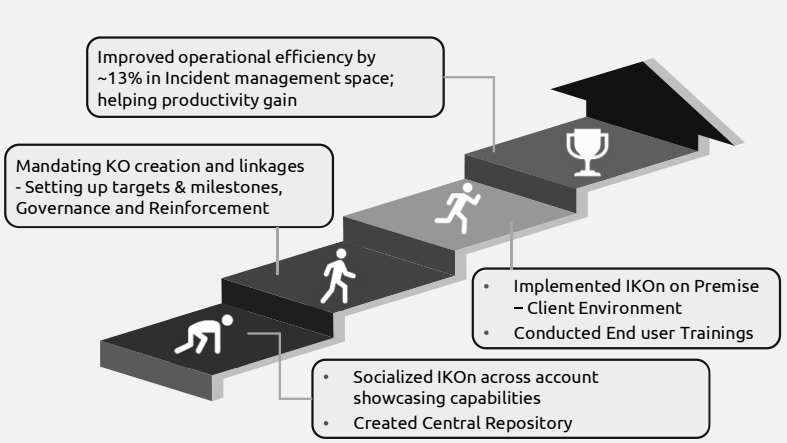

Higher Dependency
- Expertise in demand for resolution – person dependency

Benefits
- Improved discipline
- Consistency in ticket resolution
- Knowledge retention
- Improved KO quality
- TAT on repeat incidents – 25% reduced
- Shorter Application KT duration

ADM Lever

IKON is an Incident-Knowledge Object based cognitive robot which acts as a one-stop shop for effective and efficient service delivery. It is a Capgemini proprietary tool which uses Natural Language Processing (NLP) to identify nearest matching solution for an incident from the KEDB. IKOn acts as an enabler by presenting the analyst a view of top 2 possible/nearest solutions with relevancy percentage. Additionally it also shows the historical usage of the solutions.

Current State

4600+	9800+	2200+	45%	SAP	DCS
Knowledge Objects	KOs Linked	KOs Referred	% of KO Reused	Highest KOs Created	Highest KOs Linked

Company Confidential © Capgemini 2026. All rights reserved.

Case Study: Implementing RCA Agent for leading Aviation organization

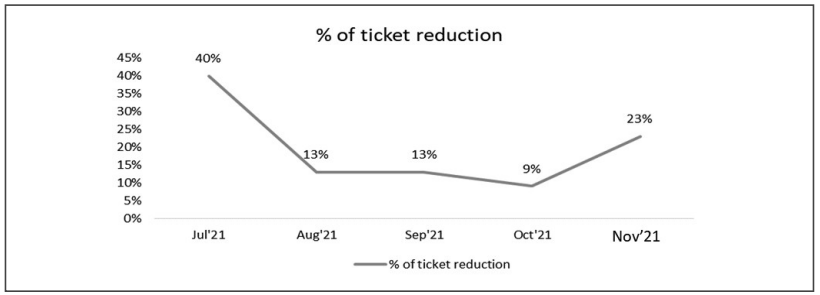

Delivery Challenges

High Ticket Inflow
- High Ticket inflow due to which the cost of Operation is high

Labour Intensive
- Manual cause code assignment for each incident

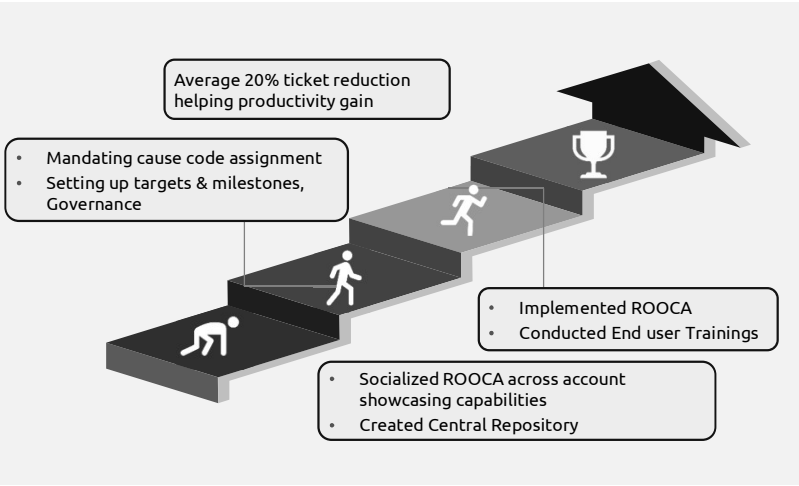

RCA
- Guidance on right RCA technique to be deployed.

Longer Problem Management Execution Window
- Typical cycle takes about 3 months.
- Complex process that needs guidance.

Benefits
- Automated Problem Management(PM) Process
- Faster Identification of Permanent Fix
- Reduced Operations Cost
- Shorter PM Execution Window

ROOCA a cognitive Problem management Robot that provides a platform to perform Problem Management in a cognitive and automated manner. ROOCA simplifies the way the most important activity in the Problem Management – assigning cause codes. Equipped with NLP and the power of machine learning, the tool keeps learning from inputs progressively. Once the tool sufficiently understands the thought process through manual assignment of cause codes, it takes over job.
Later in the exercise, once the issues have been identified, the tool proactively helps with:
Displaying an existing RCA and helps in getting to the root cause of the problem
Displaying an existing solution for a similar issue which has occurred in the past

Problem Management

10	10	10	3	Digital Operations	Digital Operations
Problem Identified	RCA created	SIP created	Towers Using ROOCA	Tower with Highest RCA Created	Tower with Highest SIP Created

Ticket Observations and Inferences – Indigo Direct Channel Applications Leveragng

2300
Total Incident (Dec25 to Feb26 3months)

767
Average Tickets/Month

68%
High Priority tickets (~32% Moderate priority)

35%
of the tickets are potential candidate for Automation & Elimination

Summary

Capgemini's Smart Analytics automation analysis results:

~799+ out of total ~2300+ tickets (35%) are likely initial candidates for automation

- **26%** are Elimination candidates & **8%** are Automation candidates
- IBC Failure Alert, Fulfillment, Alert: High Latency (Slow Performance), Alert: High Error Rate, Apps daemon service/process related issue, User ID creation/modify/deletion requests are top candidates for Elimination and Automation.

Top Candidates for Analysis and Elimination

Ticket Type	Total	%
IBC Failure Alert	222	10%
Alert: High Latency (Slow Performance)	185	8%
Alert: High Error Rate	80	3%
5xx Error (Server side error)	52	2%
Application slow performance issue	37	2%

Sample Tickets

- Create IBC Failure Alert
- query_alert_monitor - Alert Summary: High Latency Detected in API in get_/v1/addon endpoints
- query_alert_monitor - Alert Summary: High Error Rate Detected
- query_alert_monitor - Alert Summary: High 5xx Error Detected
- Observing high response time in ms-prod-aro-itinerary.goindigo.in

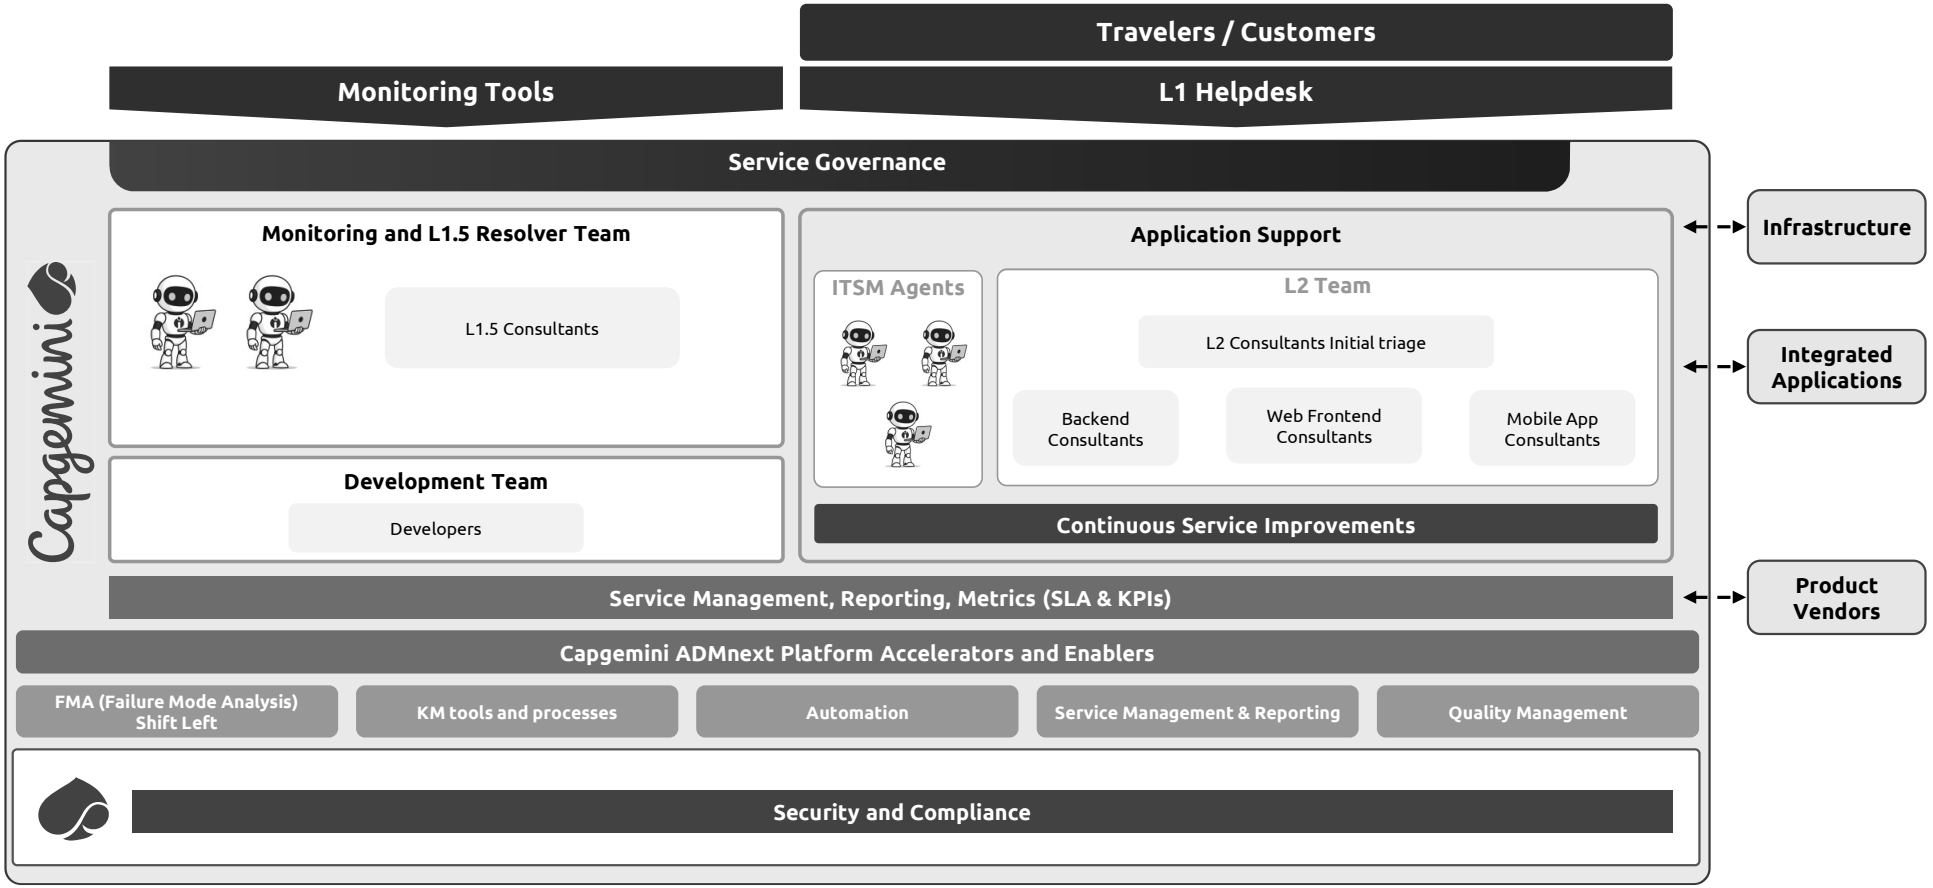

Top Automation Use Cases

Ticket Type	Total	%
Apps daemon service/process related issue	66	3%
User ID creation/modify/deletion requests	38	2%
Login Failure issues	30	1%
Access grant/modify/remove requests	29	1%
Data upload/modify requests	12	1%

Sample Tickets

- As observed the service – Flightsearch is about to break it's threshold.
- The customer is wants to delete his indigo account.
- Login Issue in Customer login and Agent Login
- Guest user can check-in and manage bookings on Mobile App v7.3.4 despite guest access being disabled
- Inconsistencies in Format and Dashboard Data | POD-30039

Support Service Team Structure
Enabled by AI and Agentic*

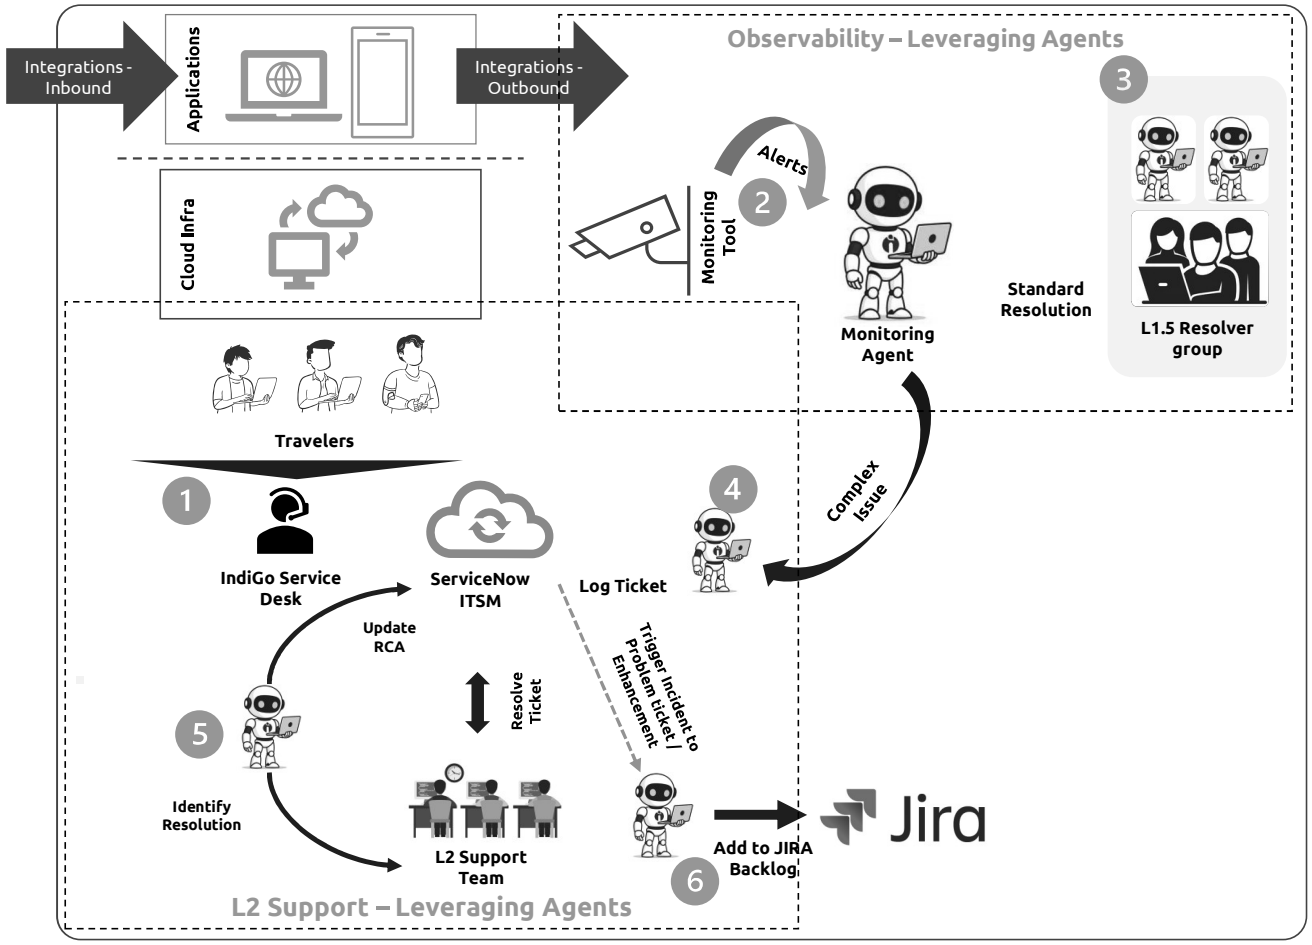

*Agents would come into picture as we implement automations

Company Confidential © Capgemini 2026. All rights reserved.

AI first workflow for application support

Enabled by Automation: BOT/Agents*

1. Travelers / Travel agents phase issue with the website / mobile App – they approach the IndGo helpdesk
2. Monitoring Tools send alerts that are analyzed by an AI Agent
3. L1.5 Resolver team resolved based on SOP by L1.5 team or Auto-heal AI Agents.
4. Complex monitoring issue and high priority issue logged by another AI Agent into ServiceNow with appropriate queue assignment
5. L2 Team seeks help of iKon agent to identify resolution and resolve and update the RCA
6. L2 team may need to raise a problem ticket / enhancement – the JIRA agent creates a story in JIRA

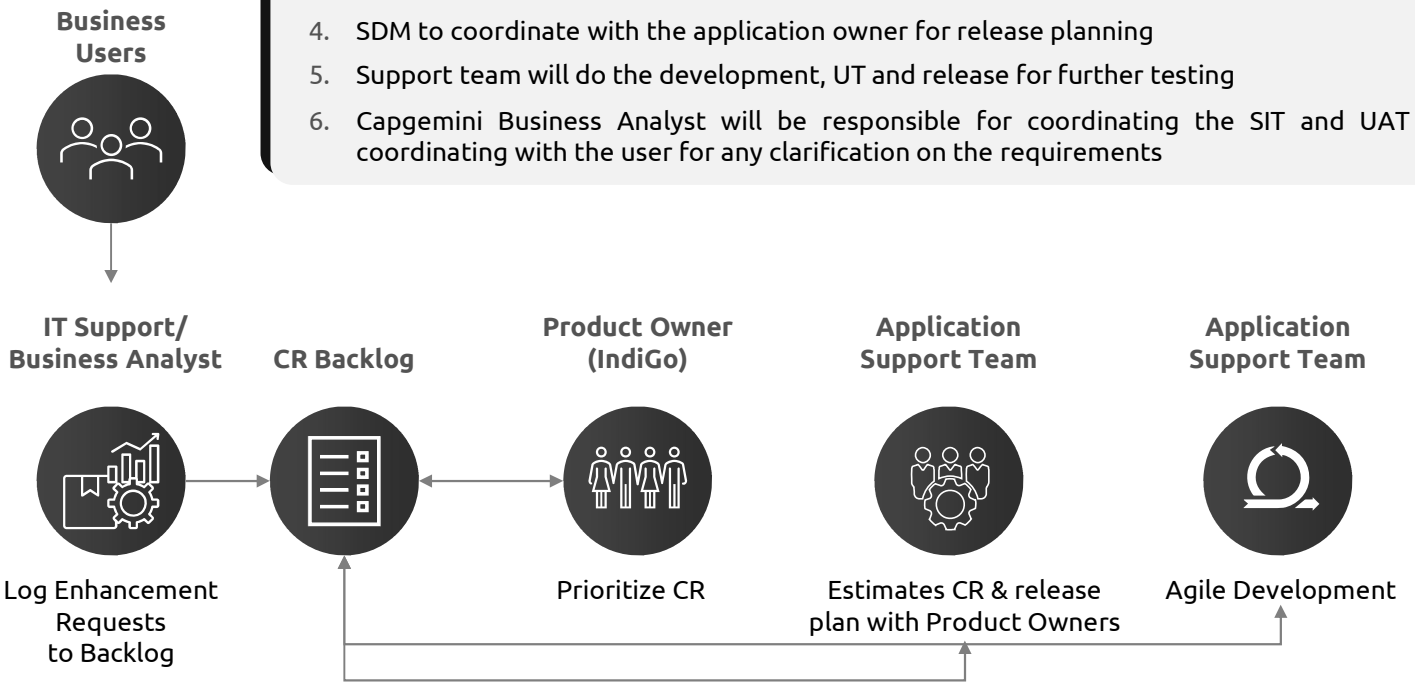

*Agents wand BOTs ould come into picture as we implement automations

Company Confidential © Capgemini 2026. All rights reserved.

Delivery of minor enhancements with fixed capacity

Minor Enhancements that need less than 80 hours for development

1. Business users to provide requirement to the support team through the product owner – this will be logged into backlog
2. Application owner to provide relative priority
3. Support team to provide estimation via story sizing
4. SDM to coordinate with the application owner for release planning
5. Support team will do the development, UT and release for further testing
6. Capgemini Business Analyst will be responsible for coordinating the SIT and UAT testing by Caterpillar users and for coordinating with the user for any clarification on the requirements

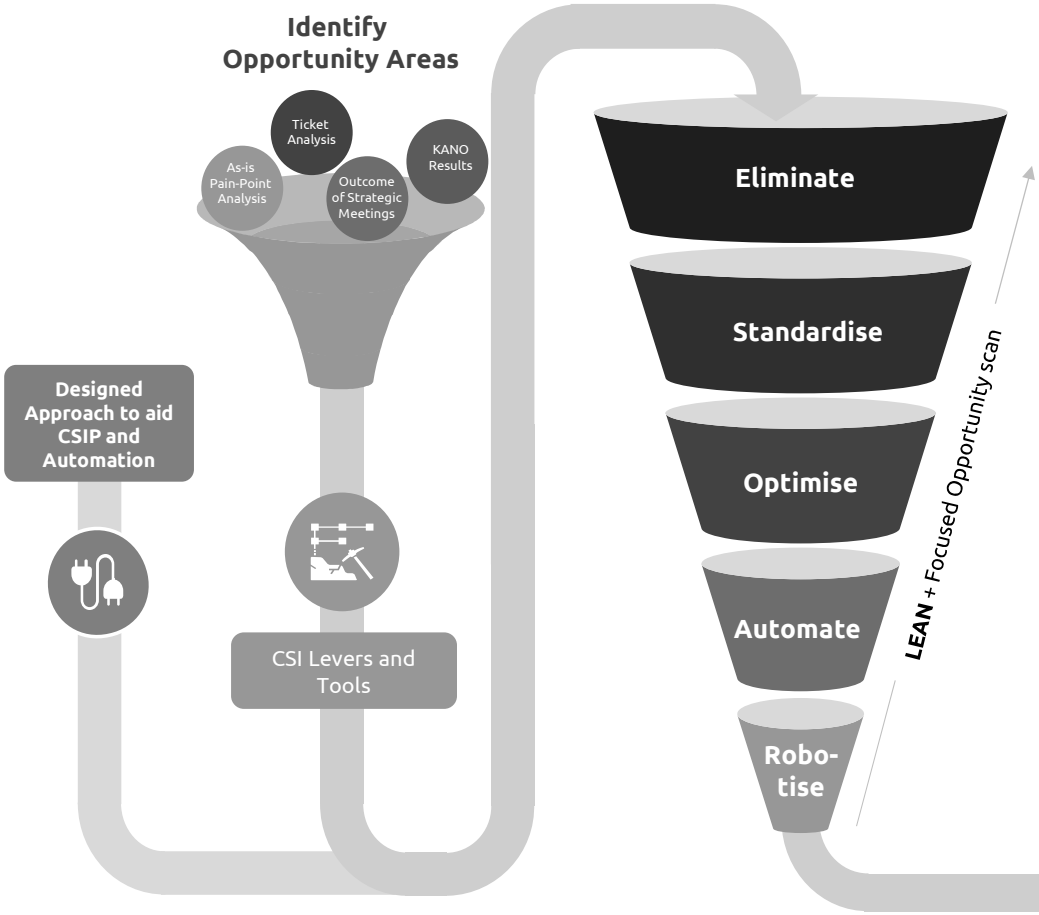

Status Reviews

Release Planning meeting to identify CR plan of release

Weekly Status Calls

Continuous Service Improvement: ESOAR methodology

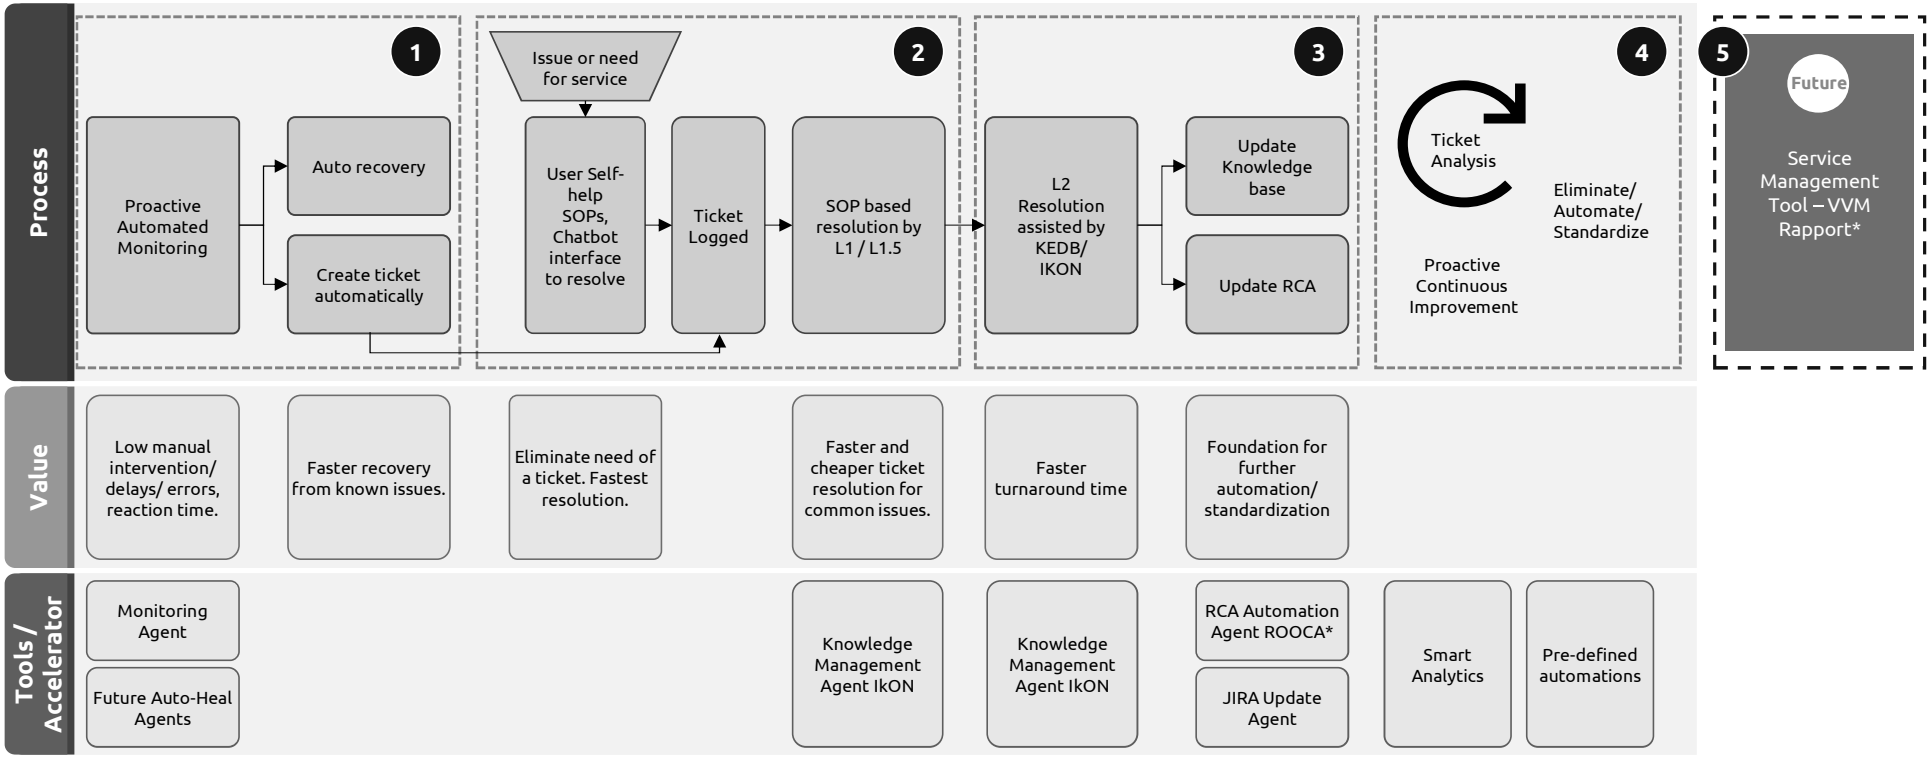

Approach	Achieve new targets for the next 12 months
Focus on elimination of the activities which drive work effort	▪ Leverage Failure Mode Analysis & Monitoring across **ACT** factories leading to additional ticket reduction of **~4 000+ incidents** with permanent fixes
Leverage best practices for standard processes	▪ **Unified RUN process** for all **ACT** factories across entities ▪ Uniform deployment of **tools & accelerators** across all the scope within factory
Use benefits of Industrialization	▪ Creation and publication of additional **~300+** KEDBs for user related error corrections
Non-invasive IT / best of breed tools and solutions to drive further automation	▪ Additional implementation of **50+** automation use cases across **ACT** factories
Achieve further benefits realization opportunity by using Generative AI	▪ **GenAI use cases** in action for ADM services like Incident /Problem mgt, Knowledge & Content/Mgt. and Code generation ▪ Target to have at least **50+** new automated non regression test cases

Company Confidential © Capgemini 2026. All rights reserved.

We leverage best practices, tools and techniques to deliver continuous improvements

We would transform the application support and platform support as the application stabilizes and we have a better understanding of the environment. The following picture highlights how we will bring various tools and techniques to improve the application management service.

1. Proactive Monitoring: application, user transactions. Alerts interpreted by monitoring agent. Future: Auto-Heal agents
2. Faster resolution by user / service desk / L1.5 – using standard operating procedures – knowledge agent to identify SOP
3. Faster TAT, lower cost of resolution using knowledge Agent IkON
4. Periodic Ticket Analysis to find opportunities to Eliminate Tickets, Automate or Standardize using SOP
5. Future: Service Management, reporting and online collaborative governance.

Company Confidential © Capgemini 2026. All rights reserved.

Proposed service levels objectives (1/2)

We will review these as well as the penalty aspects with IndiGo when we reach the next stage. We have included out point of view against the SLA

Measurement	Metric Type	Definition	Target	Severity Level
ITSM Automation Service Availability	Availability	Metric: % of Uptime Formula: Uptime % = {1-[(Total Downtime) / (Total Time – Planned Downtime)]} *100 Services must be available 24x7 for triage, RCA, and ticket automation operations. Total Downtime: Cumulative time services are unavailable for use by IT Ops teams. Planned Downtime: Scheduled maintenance time agreed upon by IndiGo and the service provider. Total Time – 24 X 7 measured over a period of month. Period of Measurement: Monthly Penalty Clause: For each additional drop of 1% in performance below 98%, an additional 0.5% of the Quarterly Payment shall be levied as Liquidated Damages.	>= 99.9%	0
			<99.9% and >= 99.5%	4
			<99.5% and >= 99.0%	5
			<99.0% and >= 98.5%	6
			<98.5% and >= 98.0%	7
			<98.0%	8

Capgemini Point of View

- We understand the uptime is for the automation assuming we are going to manage the automations
- Uptime for the agents and BOT implemented is dependent on multiple factors like infra-availability, etc.
- Once the implementation is finalized, we would bring up the dependencies and factors outside Capgemini control for this measurements

Company Confidential © Capgemini 2026. All rights reserved.

Proposed service levels objectives (2/2)

S. No	Category/ Component	Metric Type	Definition	Target
1.	Average RCA Generation Time	In seconds	Time taken to generate RCA reports after incident detection.	≤ 30 seconds for standard incidents
2.	Incident Classification Speed	In seconds	Time taken to classify and route incident after detection.	≤ 2 seconds for 95% cases

S. No	Measurement	Definition	Target
1.	Time to submit RCA to relevant Indigo POD – High Priority	Time taken to resolve / reassign to relevant tickets classified as High Priority (impacting critical IT services). Target: 100% resolution within (2 Hrs) of reporting. Below 97%: 1% liquidated damages per 1% drop	100% within the defined target >=99% and <100% >=98% and <99% >=97% and <98%
2.	Time to submit RCA / ownership to get it Resolve by relevant POD – Medium Priority	Time taken to resolve tickets classified as Medium Priority workflow automation issues. Target: 100% resolution within (6 Hrs Below 97%: 1% liquidated damages per 1% drop	100% within the defined target >=99% and <100% >=98% and <99% >=97% and <98%
3.	Time to submit RCA / ownership to get it Resolve by relevant POD – Low Priority	Time taken to resolve tickets classified as Low Priority (cosmetic or minor issues). Target: 100% resolution within (20 Hrs. Priority Level as defined in scope of work. Below 97%: 1% liquidated damages per 1% drop	100% within the defined target >=99% and <100% >=98% and <99% >=97% and <98%

Capgemini Point of View

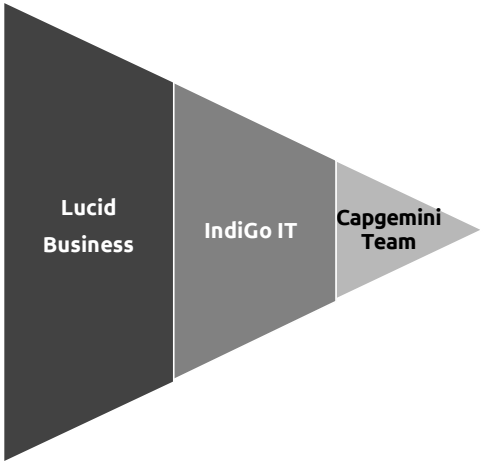

- We understand the RCA would mean analysis and finding the root cause of the incident using Agentic/AI automation
- We can look at implementing these SLAs once the automation is in place
- In our experience, the agent or BOT will depend on the historic data to learn and effectively create a RCA. The historic resolution and RCA data needs to be made available to the automation to be effective
- Usually, the automation of root cause is human lead. The target time would be considered as the time the automation takes to share possible root causes.
- Ownership to get the incident resolved by the POD: We need to understand this better. While Capgemini team will own the interaction and coordination with the POD, getting delivery within the SLA may not be their control

Company Confidential © Capgemini 2026. All rights reserved.

Demand Management Process for Enhancements

Monthly rolling plan in collaboration with IndiGo will feed resource needs based on demand spikes

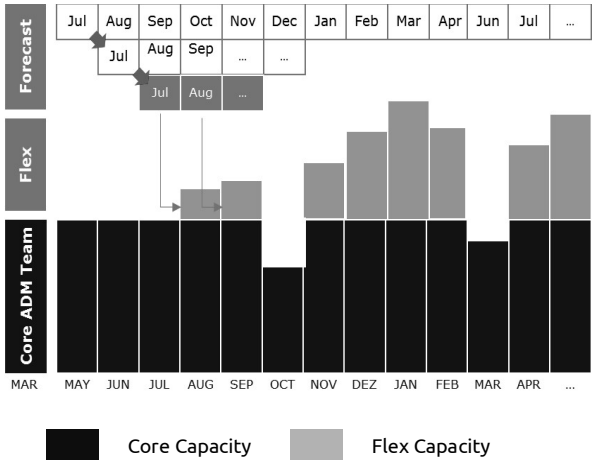

DEMAND CONSOLIDATION

DEMAND FORECASTING

CORE-FLEX MODEL

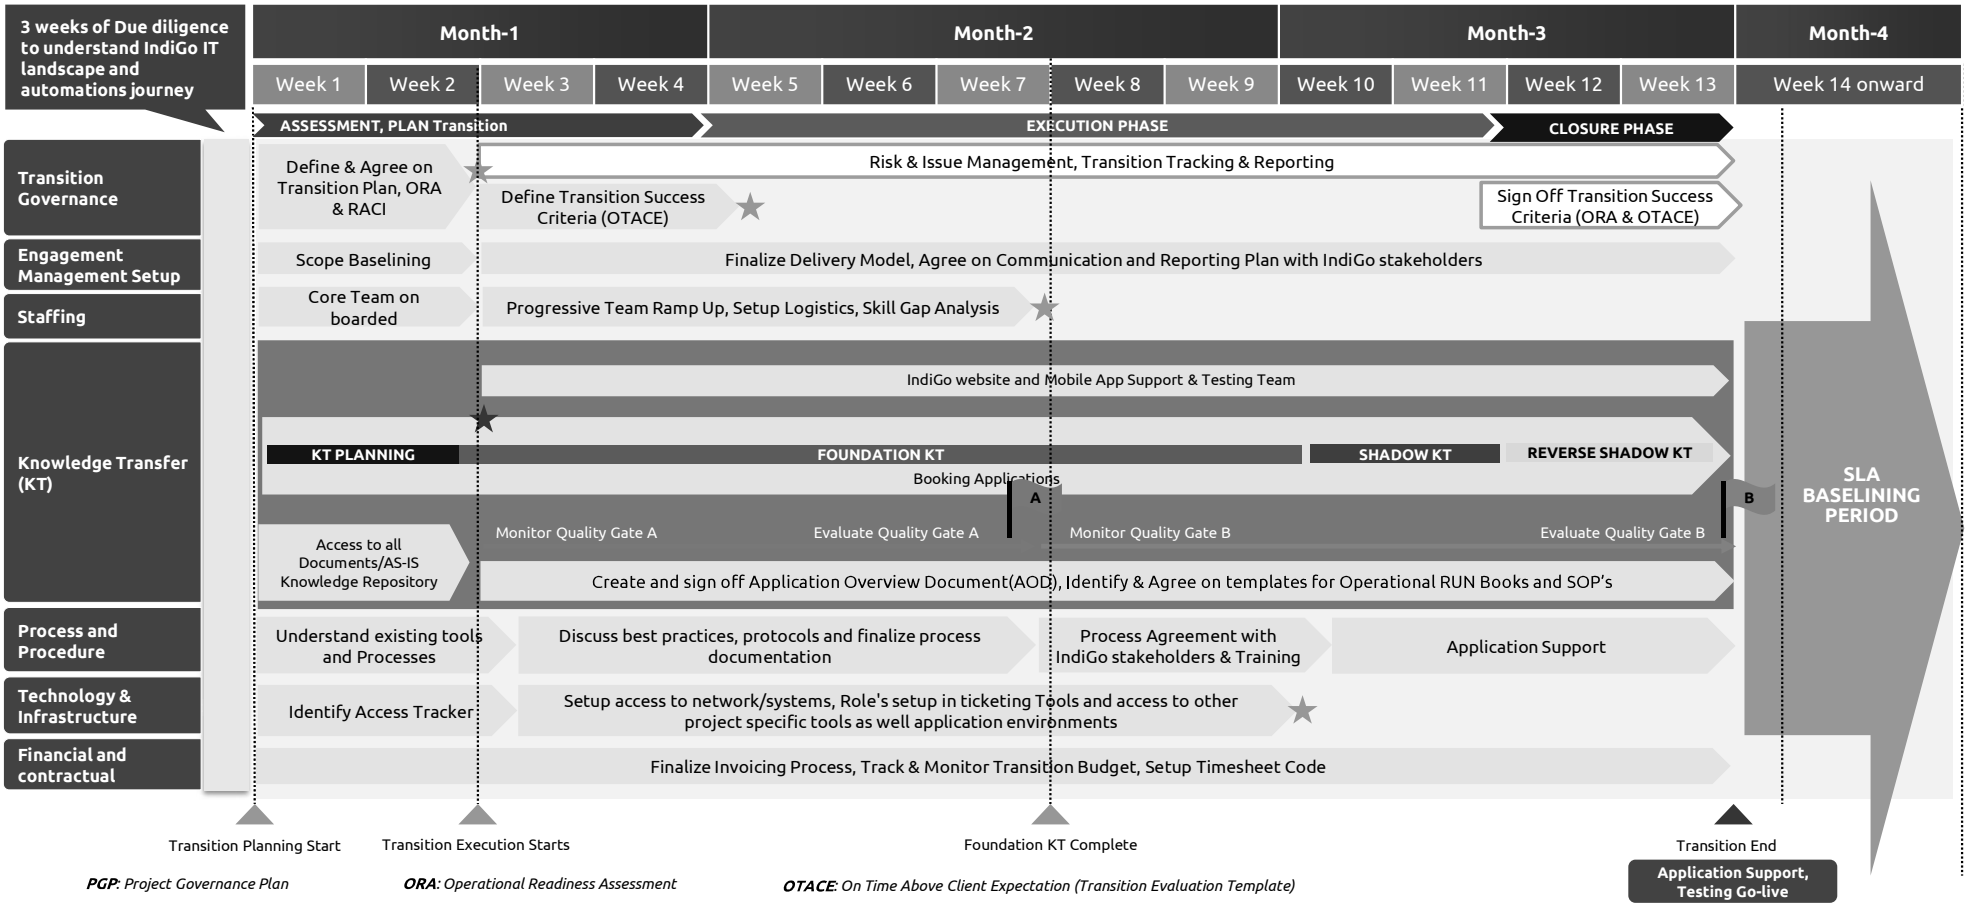

Demand Management	Capacity Management	Service Availability Management
Flex Resource Pool	**Reusability Analysis**	**Cross- Skilling**

Continuous demand-capacity measurement and balancing

Support Transition

Thorough and systematic approach involved in transitioning to a Support Managed Services, emphasizing a detailed and structured process and ensure foundation for the automation journey is laid out

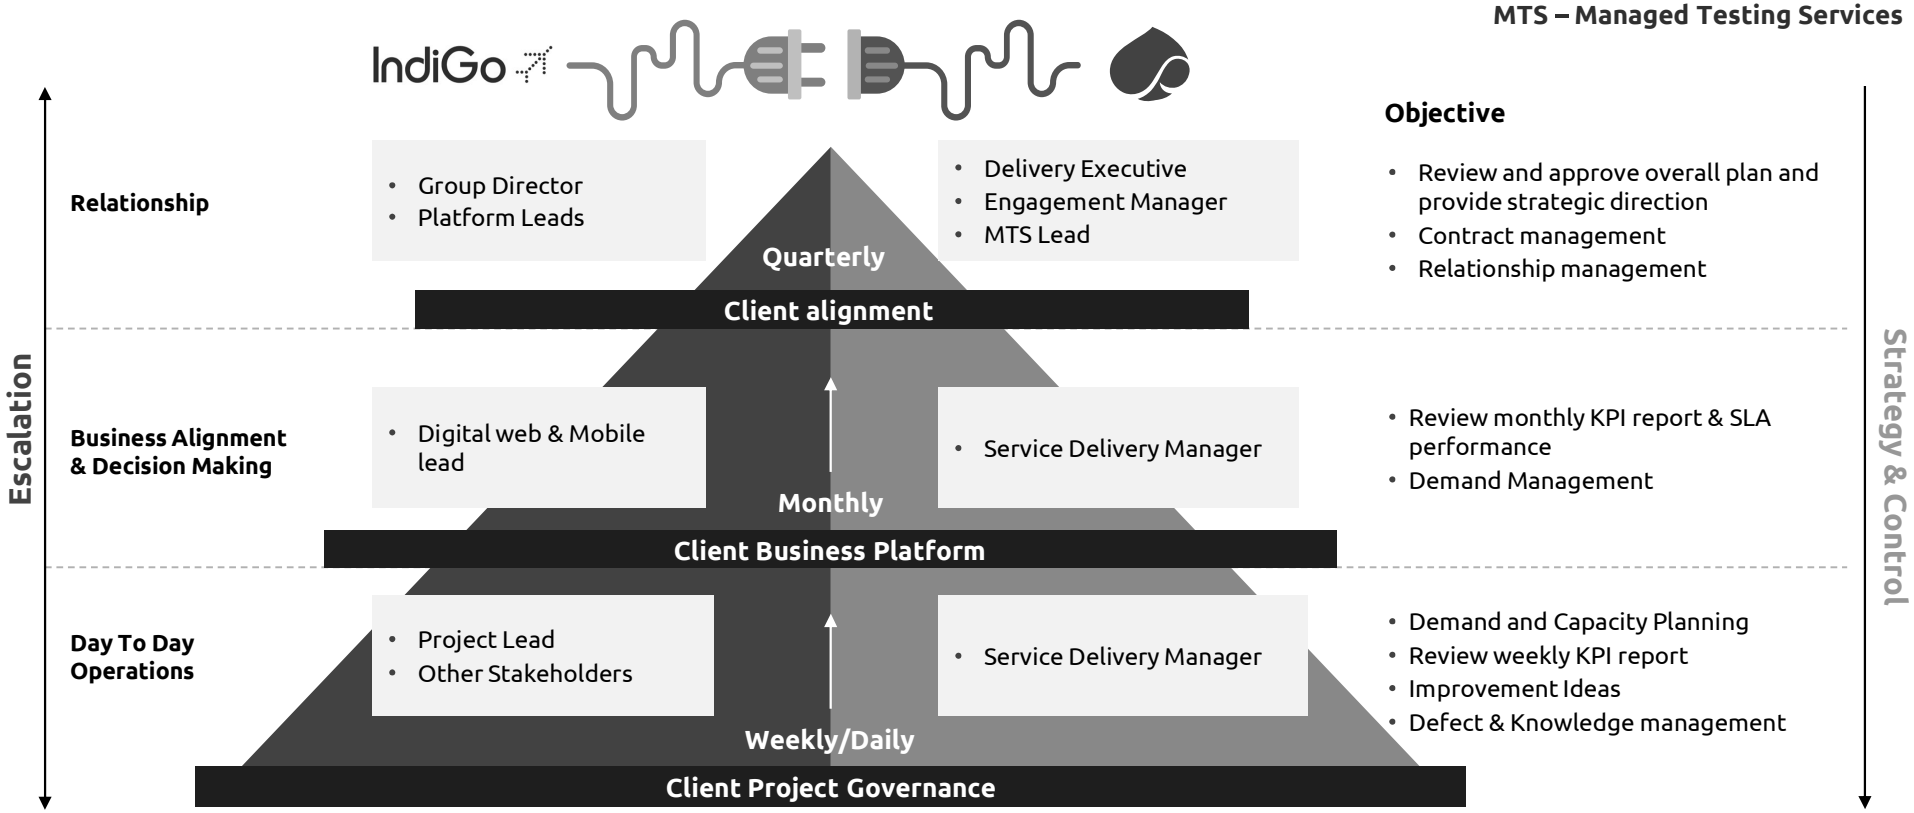

Company Confidential © Capgemini 2026. All rights reserved.

Strong governance and collaboration at strategic level

Governance ensures consistent and structured engagement with all stakeholders, facilitating both day-to-day operations and fostering strong business relationships through regular, timely interactions

MTS – Managed Testing Services

Company Confidential © Capgemini 2026. All rights reserved.

Assumptions and Dependencies – Application Support

- The automation agents will be deployed to bring the efficiency committed
- We have included the cost for the Agentic solutions on the ServiceNow platform – we have showcased a ready to deploy tool kit from Capgemini – however the cost for this is not included in the proposal
- Solution is based on a monthly estimated ticket volumes that is 765 (546 Alerts + 290 Incidents) tickets per month and coverage as specified in the scope section.
- The team structure and commercials are based on the baseline volumes. More than 10% +/- change in volumes would require a re-evaluation of the team and commercials
- Any SLA breached beyond Capgemini control will be brought to IndiGo notice for discussions
- The ITSM tool is assumed to be configured to generate all required governance and SLA reports
- It is assumed that the monitoring tool is in place and configured to generate alerts.
- Re-estimation of support efforts would be carried out post UAT phase and any changes to the staffing required would be discussed with IndiGo through change control process
- IndiGo will provide user accounts and authorizations to application environments as well as a connectivity solution to the environment that ensures adequate data security, with a lead time not exceeding 2 weeks upon initiating the request.
- The program operational language will be English, including documentation for training, reporting etc.
- Software licenses for any required tools or 3rd party solutions as well as GenAI, AgenticAI platforms as jointly agreed as necessary for the program would be procured by IndiGo
- The mobile App UI will be tested using Android and iOS simulator- if specific devices are required, IndiGo will provide those
- The support team will be taking up enhancement work as well – there is no separate dedicated team aligned to enhancements as the capacity required for enhancement is quite small
- In number for P1 + P2 tickets per month will not exceed 5% of total monthly ticket volume
- Any development activities of more than 40hrs efforts will be addressed as a change request
- The fixes if any and enhancements developed by the team will be promoted to the next environment by the team. Release to production is not considered in scope for this team

Company Confidential © Capgemini 2026. All rights reserved.

Testing Section

Company Confidential © Capgemini 2026. All rights reserved.

Accelerated Automation Approach for IndiGo Web & Mobile App

Our strategy aims to achieve 70% to 80% test automation coverage for the IndiGo Booking application by leveraging a robust automation framework

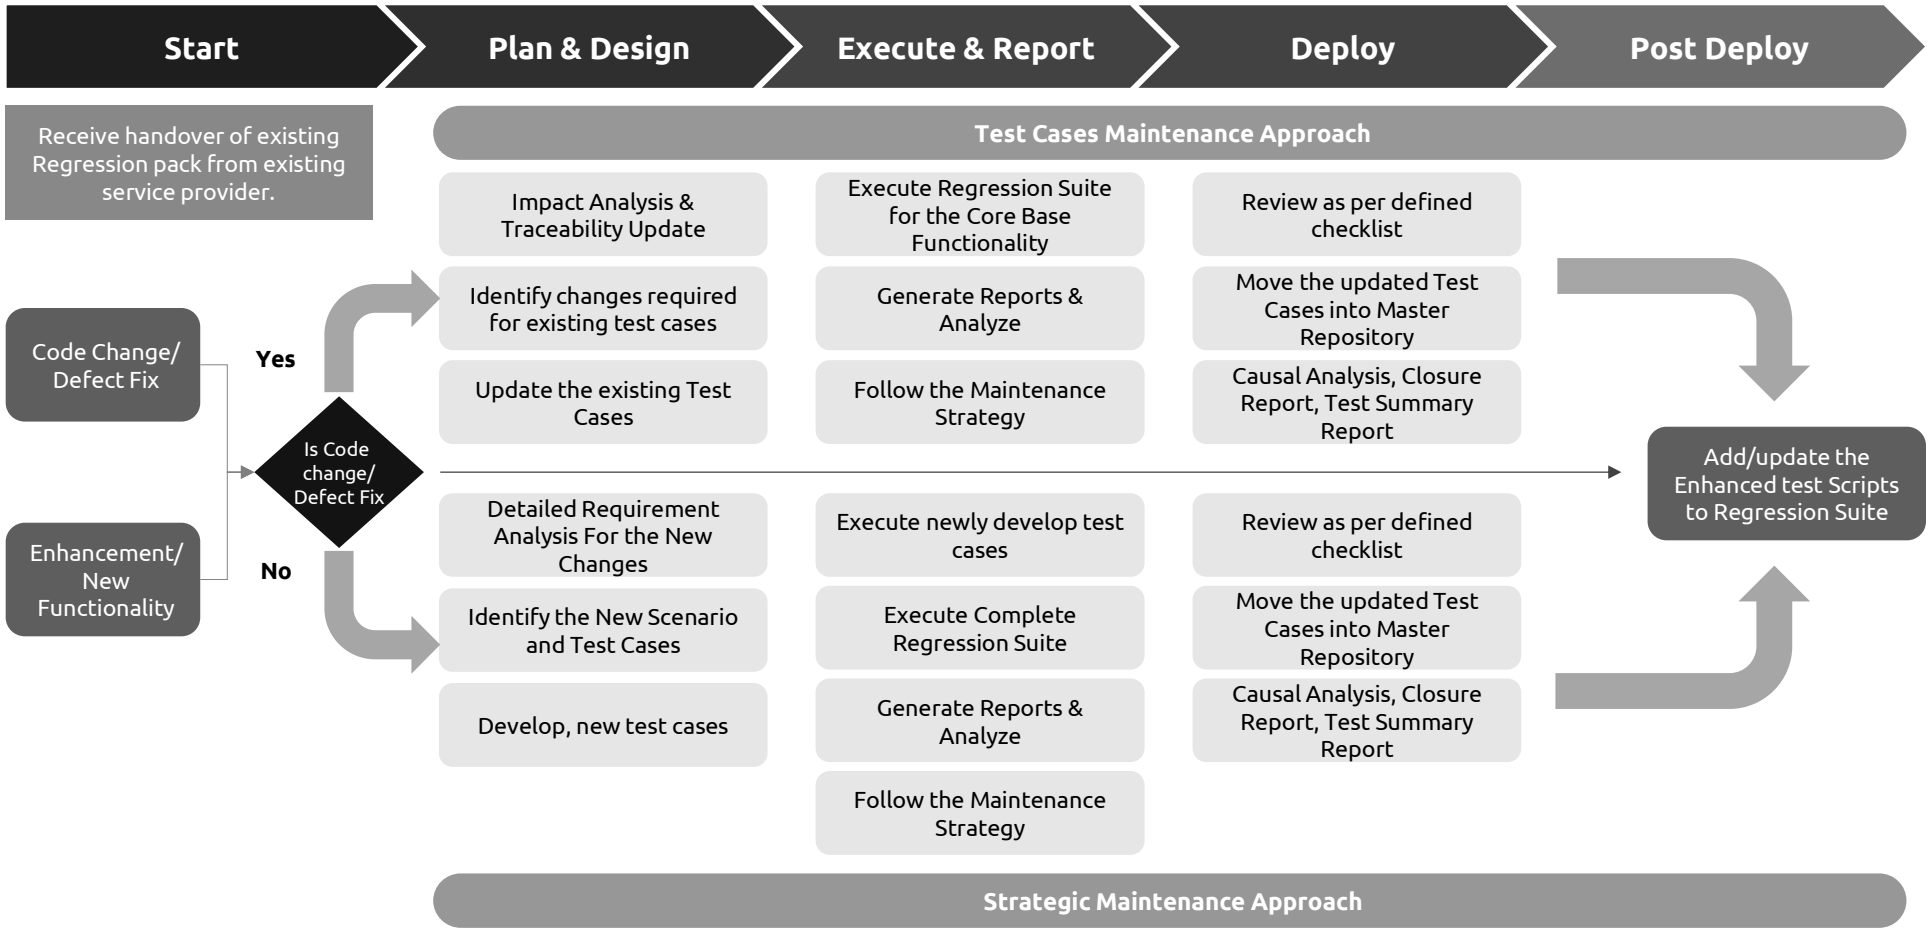

RELEASE WISE PLANNING & ANALYSIS	RELEASE WISE DESIGN & EXECUTION	CONTINUOUS INTEGRATION
• Gather Impacted areas that require Regression Testing • Analyse scenarios in scope for web, mobile and API • Access to systems under test and general access to client environment • Automation Feasibility analysis of IndiGo's application in Desktop Web, Mobile Web, Mobile App for the current release • Finalize the regression scope executable by two resources • Plan automation coverage for approved regression scope. • Indigo Existing Automation Framework Understanding	• Functional and API Regression test scenario update for the agreed scope from the existing regression pack • Review and Sign Off Manual Regression Suite • Regression test execution and reporting • Build automated regression pack for agreed scope • Identify the reusable methods/functions and framework changes • Identify changes required for existing automation scripts	• Execution of available automation regression test suites across Desktop web, Mobile web, Mobile App and API using CI/CD tools • Results validation and reporting. • Move the updated Code into Master Code Repository • Add/update the Enhanced test Scripts to Regression Suite

DELIVERABLES		
• Identified Manual Regression suite • Automation feasibility outcome	• Manual and automation Regression suites • Execution reports	• Execution Reports • Handover documents

Company Confidential © Capgemini 2026. All rights reserved.

Regression Pack Maintenance and Enhancements Approach

Company Confidential © Capgemini 2026. All rights reserved.

Assumptions

- Regression testing will commence only after the Dev/QA Lead provides formal approval of the build.
- The automation framework will leverage open-source tools such as Selenium (Java), Appium or Playwright.
- The development team will deliver a stable and pre-tested build for QA.
- All fixes included in the build will have successfully passed unit testing and peer review.
- Each defect fix will be accompanied by clear and detailed validation steps.
- No hidden, undocumented, or uncommunicated changes will be included in the build.
- No new functionality or scope changes will be introduced without prior notification.
- Every defect ticket will include:
  - Root Cause Analysis (RCA)
  - Identification of impacted areas
- The QA environment will be fully functional and ready for testing activities.
- No environment, configuration, or integration issues will exist during testing.
- All supporting and dependent systems will be available and accessible for testing.
- REGRESSION TESTING SCOPE for two resources:
  - Regression test Case Creation: Out of Scope
  - Modification of Existing Regression Test Cases: 40
  - Execution of Regression Testing Scope Distribution in various browsers / devices

Total TCs	Browser 1	Browser 2	Browser 3	Mob Dev 1	Mob Dev 2	Mob Dev 3
80	20%	20%	20%	20%	10%	10%

- PERFORMANCE TESTING SCOPE for ONE resources – 30 Test Scripts per month.
- PT Test Case Creation: Out of Scope
- Required performance testing tool / license will be provided by Indigo
- We assume existing scripts are available, and we will only modify the existing test scripts based on the release requirements.
- Performance baseline is not part of the scope, and we will leverage the existing baseline

Company Confidential © Capgemini 2026. All rights reserved.

Assumptions

- Regression testing will be limited to the modules impacted by the delivered defect fixes.
- Details of the impacted application areas should be shared by Indigo at the end of the planning phase.
- Any increase in defect volume / new functionality beyond the capacity of two resources will require additional effort or additional resources.
- Regression coverage will focus only on the functional areas impacted by the fixes, based on the impact analysis provided by the customer.
- For regression Testing, we have planned a volumetric range of 60–80 test case execution per sprint.
- Full end-to-end regression of the entire application is out of scope unless specifically requested with CR.
- The regression plan for each cycle will be mutually agreed upon prior to execution.
- Mobile devices (Android/iOS), simulator licenses, and MacBook hardware will be provisioned by IndiGo.
- Automation efforts will focus on stable, repeatable regression scenarios only.
- New automation scripts will be developed based on the available time within the monthly capacity of two resources, who will target 10–20 test cases per month to progressively increase automation coverage for regression testing.
- Monthly automation delivery will depend on application stability and the volume of fixes released.
- A stable QA environment will be provided for executing regression tests.
- Required test data for both regression and automation will be supplied or made accessible.
- There should be no dependency bottlenecks, including API availability, third-party integrations, or access restrictions.
- Open-source automation tools will be used. If Indigo requires any specific tool, it will be discussed during the KT phase and taken forward accordingly.
- Localization or country-specific testing is out of scope.
- Security Testing is out of scope.
- If Agentic solutions are required, we can discuss the ROI separately.

Company Confidential © Capgemini 2026. All rights reserved.

How we will get started with AI Agents for QE&T

DISCOVERY
Assessment

Client Readiness
- Stakeholder interviews, Maturity Assessment
- Understand business processes, testing scope and identify use case
- Understand the Technology landscape
- AI readiness analysis
- Risk compliance analysis

PILOT
Agent Sizing, Scoping & Planning

Plan & Build
- Define Agent Architecture
- Use existing tools, Agentic AI platforms, LLMs
- Pre-built Agents from Raise AI Agent Gallery, Sogeti AI Market Place
- Off The Shelf Agent (Eg: Tricentis , Dynatrace etc)
- AI Powered Solution using MCP. Framework

SCALE
Development, Live & Monitor

Develop
- Deploy Agent for Multiple Environment
- Enable Multiagent collaboration
- Extend to New Use Case
- Establish Monitoring
- Train Teams on Agent Interaction

Monitor & Operate
- Monitor Agent performance and drift
- Validate Agents for different LLM models
- Feedback from Users and Systems
- Fallback Strategy, KPI Tracking
- Continuous Improvement Loop

	1-2 weeks of assessment	1-2 weeks of planning	4-6 weeks of implementation
Deliverable	Agent Use case, assessment report	Agent categorization based on autonomy level and integration needs.	Agents Deployed and monitored

Case Studies

Company Confidential © Capgemini 2026. All rights reserved.

Reducing carbon-footprint by automating paper based process of crew members for a German Airline company

THE CHALLENGE

The client had sought to diminish their carbon footprint by decreasing paper usage, particularly concerning crew members who grappled with numerous paper-based processes that were challenging to organize and monitor. The inconsistency in data collection from different members often resulted in delayed or missing key information as paper documents circulated between flights. Consequently, the client had been in search of an automation system to alleviate paper usage.

THE SOLUTION

- The client wanted an app factory to effectively service the concerned domains, with the potential to be extended to other domains in the future.
- Capgemini set up and operated a fixed-price Agile DevOps app factory model for app development and maintenance
- We developed the global template application design and devised an approach for quickly rolling out to the geos with minimal customization and adaptation
- A flex team of UX designers, architects, and testers with Medium Factory Block, Small Factory Block with Core and Flex team model was deployed during the critical phases of the lifecycle to enable future delivery replication
- We proposed the QMCC (Quality Monitoring Cabin Cleaning) mobile front end to replace the manual process performed by the Air Pursers. For iPad Mini, we use the 360-degree iOS application which displayed the checklists in an intuitive way to capture the responses displayed on Pursers' device

BUSINESS VALUE

- Quick access to real-time information
- Reduced time to market with improved quality & maintenance of services
- Reduction in operational costs by providing the information in real-time
- Built a strong foundation of Agile DevOps with nearly 100% automation.

Company Confidential © Capgemini 2026. All rights reserved.

Managing 42 websites for Dental Equipment Manufacturer

THE CHALLENGE

- The client is a $4b dental equipment maker and dental consumables producer that markets its products in over 120 countries with factories in 21 countries
- Client was looking for a partner to implement and evolve the critical website used by their customers across multiple countries. Capgemini took over the program from incumbent partner, completed rollouts across 42 entities and continues to support and evolve the website. Capgemini deployed ADMNext

THE SOLUTION

- Implemented **Adobe Experience Manager** and Commerce backend to expand the client's digital footprint, with an emphasis on D2C
- Leveraged a distributed onshore / offshore Agile, feature-based Pod model for rollout
- Established a DevOps model for support and enhancement of 42 website in 17 languages. Deployed a Managed Service team to provide 18x5 application support
- Leverage ADMNext framework to stabilize the platform, reduce the support cost and divert funding to enhancement initiatives
- Continue to implement additional features to enhance the website

IMPACT

20% Team reduced from application support and moved to development team

Reduced high priority tickets by 75% by stabilizing application

The B2C and the B2B sites have improved client's **Time to Market (TMM)** allowing them to deliver their product quickly

Company Confidential © Capgemini 2026. All rights reserved.

Large Beverages Company: Field Sales Mobile App Implement and Managed

THE CHALLENGE

- The client is one of the largest beverages company headquarters in the US
- Improve business performance in outlets
- Streamline processes so that time can be reinvested in driving sales and execution in more outlets
- Retirement of four legacy solutions and the implementation of a single mobile application across all CCEP's current territories
- Deploy Stable Applications for Field Users

THE SOLUTION

- A common iOS/Salesforce Field Sales tool and knowledge-based Red One solution with flexibility for managing localization and global information needs.
- A 360-degree view of consumer for an improved customer experience.
- Harmonized customer service enabled collaboration, knowledge sharing and best practice sharing by connecting the consumers and other departments to drive a smarter & more adaptable enterprise.
- Ongoing application support of users across Europe

IMPACT

Supporting over **1.2 M** Outlets

Managing Interactions with **300 M** Customers per year

Increased Productivity of **15 Store** Visits per day

Supported **5,000 reps** in Europe

Turnaround time of incidents reduced by **5%** Reduced ticket volumes by **20%**

Company Confidential © Capgemini 2026. All rights reserved.

Supporting marketing websites for University Offering Online Trainings

THE CHALLENGE

- The client is a University is a private university in the United States. It mainly offers online programs.
- Client was looking for a partner to enhance and support the marketing application portfolio including Adobe AEM based website for student to select the courses. The client already has more than 22K students across 45 location in 18 states.

THE SOLUTION

- DevOps model to support an enhance the course content website and marketing application was setup
- Proactive monitoring to detect issues earlier and focused application support team working from India. Implemented CI/CD automation to reduce time to market. Leverage ADMNext framework to reduce the support cost and divert capacity to enhancements.
- Improving the website with initiative like resolving performance issues, automating regression test suite to improve quality, enhancing the overall user experience
- Continuous Improvements implemented for improving user satisfaction

IMPACT

10% reduction of testing efforts and improved test coverage by 30%

Reduced ticket volumes by 25%

Contributed to the Client knowledgebase to **increase the efficiency** of the support processes by **20%**

Future Avenues for engagement Beyond AMS

At Capgemini, we go beyond delivering high-quality Application Management services to act as a strategic partner—driving measurable improvements against IndiGo's business objectives. Once the support landscape is stabilized, we will start discussing new ideas for future engagement with targeted value-add services aligned to your business priorities.

1

Business Insightful Services

Meeting SLAs and KPIs is a baseline expectation. Our focus goes beyond operational compliance to actively improving the application landscape so that business KPIs are consistently met and exceeded—enabled through our Business Insightful Services.

2

Transform Customer Experience

IndiGo's direct channels are its primary sales and service engine. Leveraging our Customer Experience Center of Excellence, we bring thought leadership to continuously elevate and differentiate the end-to-end customer experience across these channels.

3

Accessibility/Sustainability/Usability

Strategies, standards, and resources to make your digital products inclusive and accessible to all users. Contribute to Indigo's sustainability goals through Green KPIs. Bring in usability testing aspect to improve the customer experience across digital channel

4

Transform Customer Experience

IndiGo's direct channels are its primary sales and service engine. Leveraging our Customer Experience Center of Excellence, we bring thought leadership to continuously elevate and differentiate the end-to-end customer experience across these channels.

Company Confidential © Capgemini 2026. All rights reserved.

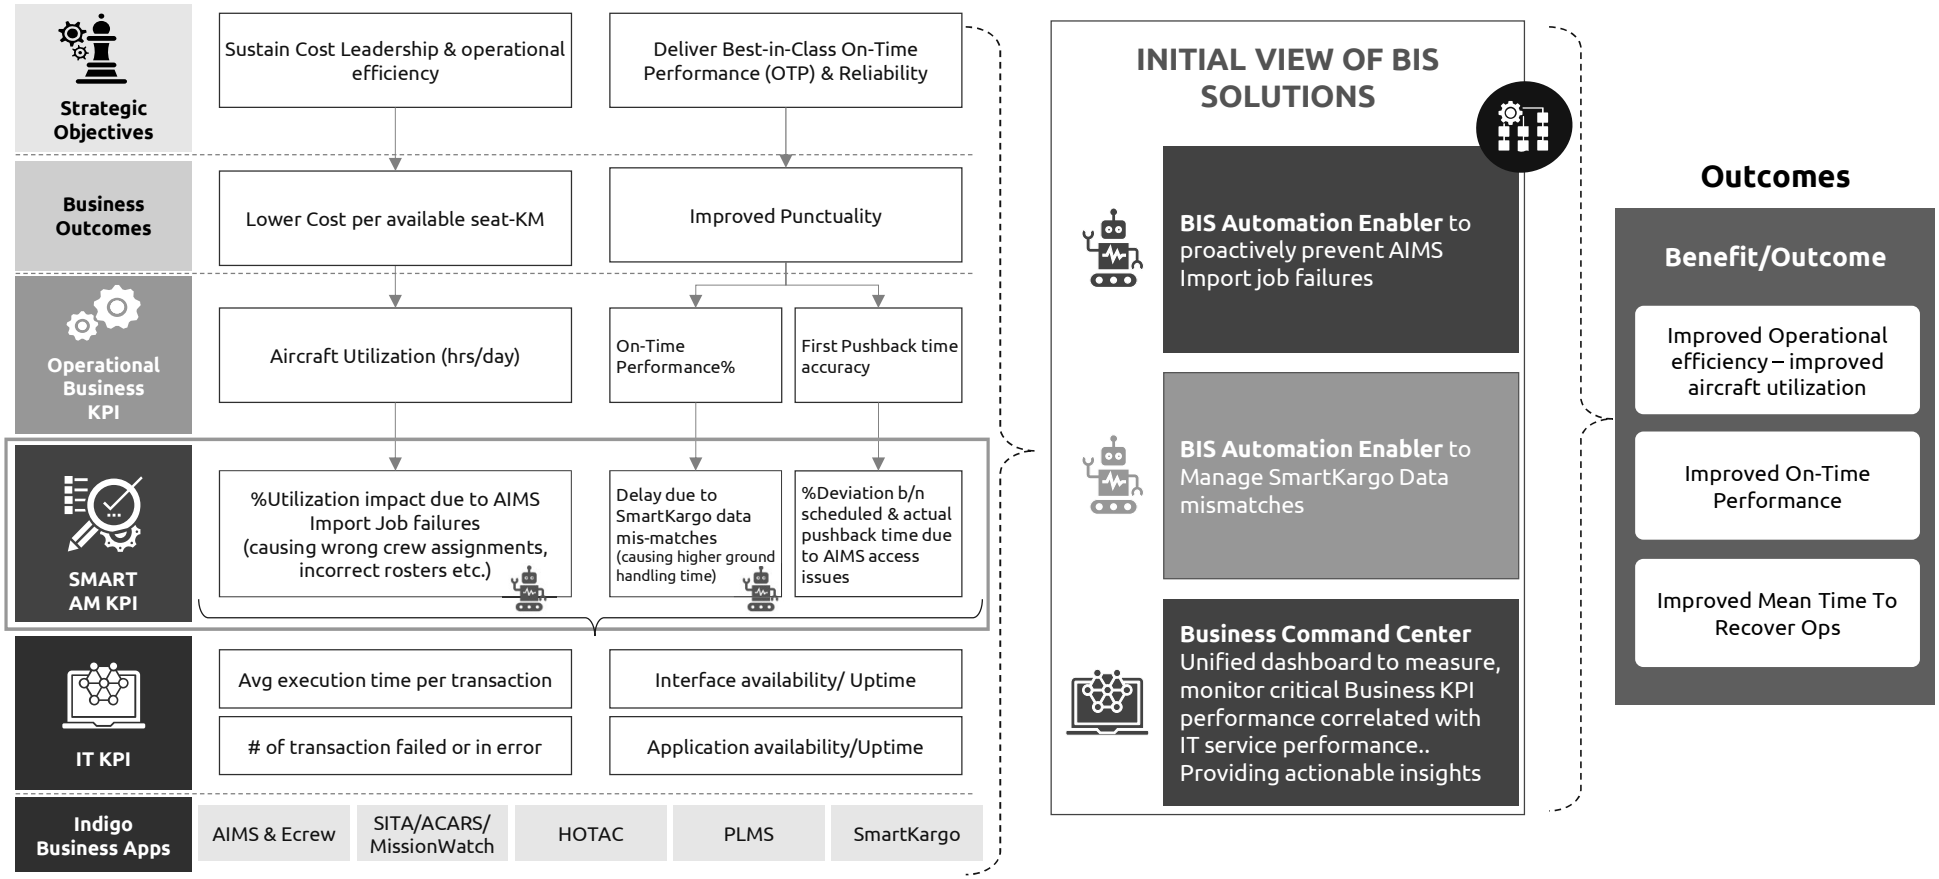

Our Data Driven Business Insightful Services (BIS) Approach can enable increased alignment between IT & Business driving superior business outcomes to INDIGO

1	INDIGO'S STRATEGIC OBJECTIVES		1. Sustain Cost Leadership & operational efficiency 2. Deliver Best-in-Class On-Time Performance (OTP) & Reliability
2	BUSINESS OUTCOME		1. Lower Cost per Available seat-KM (CASK) 2. Improved Punctuality
3	BUSINESS KPI		1. Cost per Available seat-KM (CASK) 2. OTP% (On Time Performance)%
4	SMART AM KPI		1. %CASK accuracy & timeliness impacted due to Incorrect/late data from scheduling or crew systems (AIMS) 2. No of API integration failures → mismatch in flight status or crew assignment leading to Flight delays 3. %Data pipeline delays from AODB, ATC feeds, weather systems impacting operations leading to lower OTP%
5	IT SYSTEM SLA		1. % Resolution of P1 and P2 incidents within stipulated SLA (i, ii, iii) 2. % Availability of application systems / system up time (ii, iii) 3. % Unplanned server/network outages (iii)

Company Confidential © Capgemini 2026. All rights reserved.

Capgemini Business Insightful Services (BIS) Align it Service Improvement Actions to Business, Driving Business Performance

BIS can help indigo to improve its operational efficiencies & on-time performance

Company Confidential © Capgemini 2026. All rights reserved.

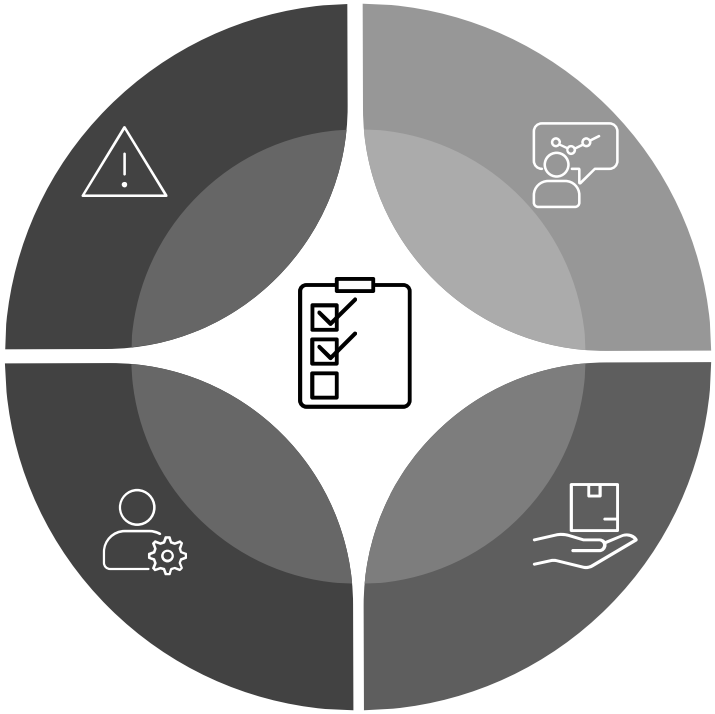

We are recommending Full Rebuild of your digital channel and not just a enhancement to existing application

The Problem

Airline apps built on legacy flows — fragmented booking, reactive support, disconnected add-ons — no longer meet the expectations of today's digital traveler. Patching the current model yields diminishing returns.

Why Now

The window for category leadership is open. AI infrastructure is mature, modular architecture is proven, and traveler expectations have permanently shifted post-pandemic. First mover wins.

The IndiGo Advantage

With India's largest flyer base, a growing ancillary ecosystem, and the BluChip loyalty platform, IndiGo is uniquely positioned to own the traveler relationship — end to end.

What It Unlocks

Higher conversion. Deeper ancillary attachment. Reduced servicing load. Loyalty engagement at scale. A platform that compounds in value with every flight taken.

Company Confidential © Capgemini 2026. All rights reserved.

CUSTOMER EXPECTATIONS

What Travelers Expect in 2026

LEGACY APP BEHAVIOR

- Navigate through menus to find tasks
- Re-enter passenger data repeatedly
- Receive no guidance — user figures it out
- Reactive support only when things go wrong
- Booking tool that disappears after purchase

NEXT-GEN EXPECTATION

- **Intention-led** — the app understands what you want before you ask
- **Zero/minimal click** — fewer decisions, smarter defaults
- **Proactive assistance** — surfaces the right action at the right moment
- **Conversational** — type, speak, or tap in natural language
- **Journey companion** — present from search to post-arrival

The shift is fundamental: from a navigation tool to an intelligent travel operating system that works for the passenger — not the other way around.

Company Confidential © Capgemini 2026. All rights reserved

Before vs. After: Key Journey Transformations

Booking

Before: 14-step funnel with repetitive data entry, multiple decision screens

After: Natural language → AI-ranked options → one-tap confirm. Under 60 seconds.

Check-in

Before: User-initiated, multi-step, easy to miss window

After: Auto-triggered at T-48hrs with pre-populated details. Boarding pass pushed to lock screen.

Add-ons & Upgrades

Before: Buried in manage booking, low visibility, missed revenue

After: Contextually surfaced at the moment of highest relevance — right after booking, and again at check-in.

Disruption & Re-accommodation

Before: Passenger waits for airline communication, then navigates to find options

After: AI detects delay threshold breach → auto-surfaces rebook/refund/hotel → one-tap resolution.

Loyalty Engagement

Before: Points balance buried, redemption journey complex, low engagement

After: BluChip wallet prominent on home, smart redemption prompts at checkout, tier milestone celebrations.

Post-Trip Retention

Before: Journey ends at landing, no retention loop

After: Invoice auto-generated, loyalty credited in real-time, return flight suggested within 2 hours of arrival.

Company Confidential © Capgemini 2026. All rights reserved.

We can bring in AI based digital factory mode to scale as needed and bring in efficiency through GenAI and Automation

App Factory model is an integrated model based on the Agile Framework that provides a practical approach of creating business transformation considering the business needs with latest innovations delivered with execution transparency

Factory serving Build to Run Mobility projects

RESOURCES / ACCELERATORS

- Dedicated pool of Mobility experts at right locations
- Continuous training and knowledge sharing
- Timely ramp up and ramp down based on forecast
- Mobile starter kit as accelerator

INDUSTRIALIZATION

- Applitecture
- Coding Guidelines
- Check lists (Code review, release, Appstore release)
- Test cases template, Delivery template
- Standard processes
- Estimation Model

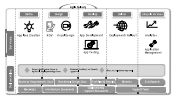

REPOSITORY

- Reusable Assets(Activity Animations, Barcode Reader, Bulk Insert Sample, Calligraphy sample, OK HTTP Sample...)
- Timely ramp up and ramp down based on forecast

A flexible resource pool with specialized competency

An industrialized way of working

Factory for Mobility

Defined Scope ↔ Clear Estimates

KPI based Delivery with Quality

Development using Agile Methodology

TOOLS AND PROCESSES

- Predefined Agile process
- Standardized tool
- Monitoring of services with KPIs
- Weekly reporting

CONTINUOUS IMPROVEMENT

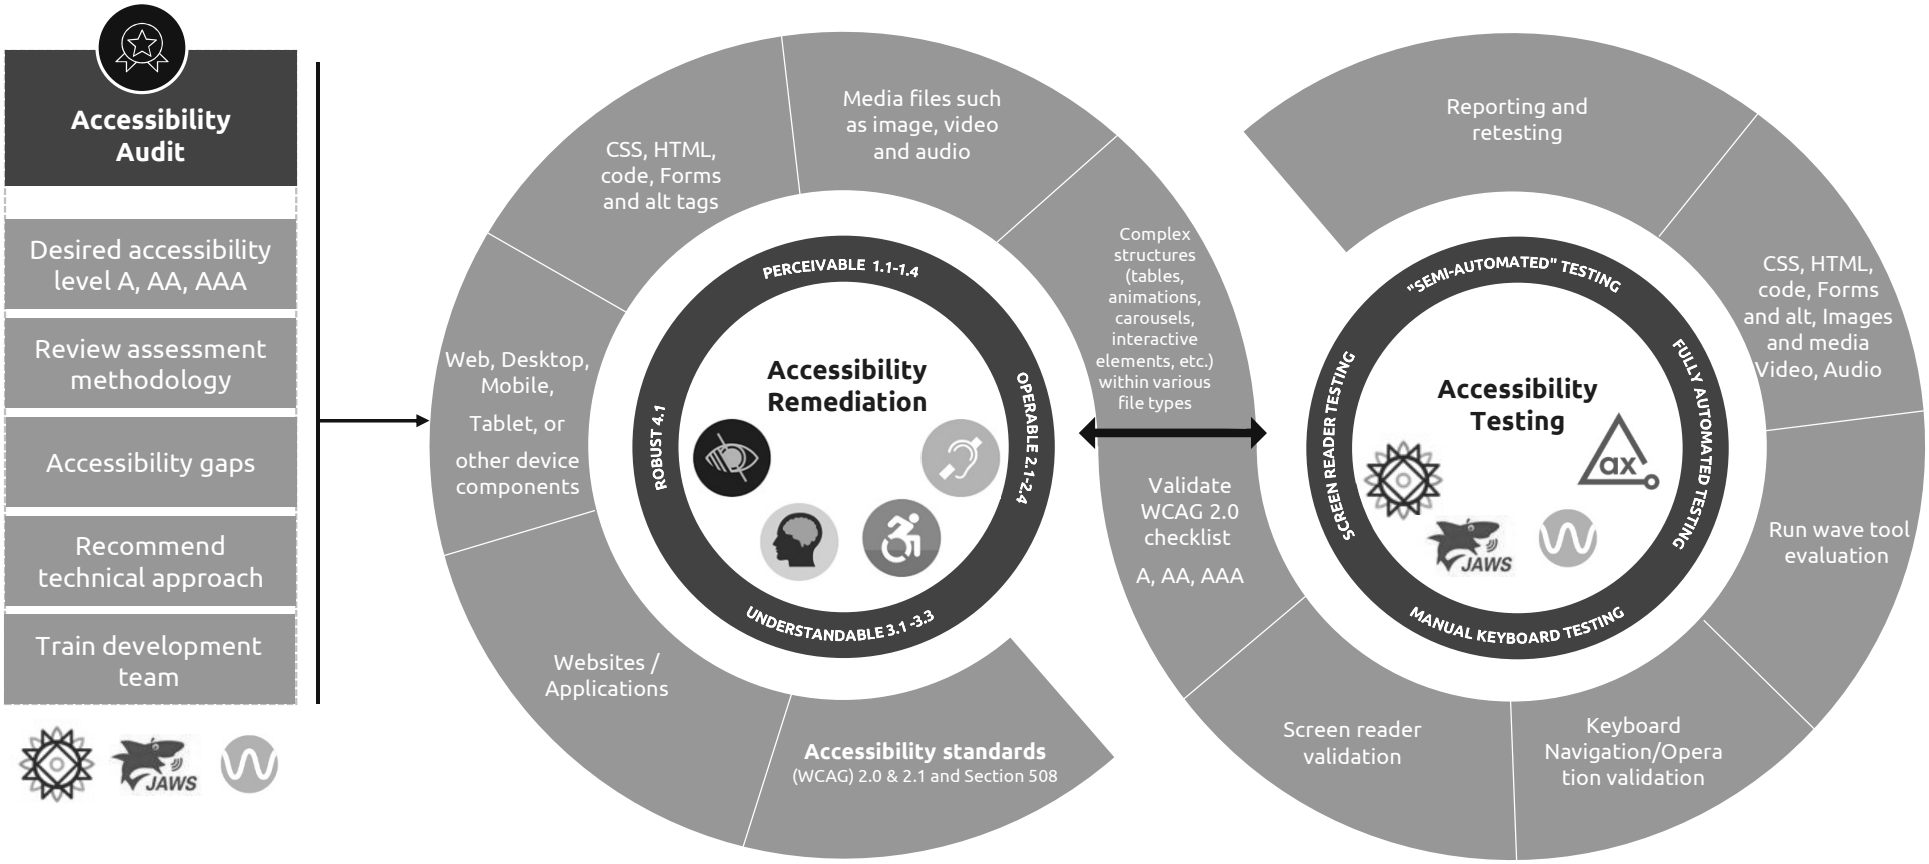

- Use of best practices
- Root cause analysis of outstanding successes and failures

Green ITSM: Outcomes & Value

KEY OUTCOMES

Green ITSM reduces energy use across IT services via capacity right-sizing, cloud optimization, and more efficient incident/problem management. It also improves service performance and resilience because leaner, automated environments are easier to monitor, stabilize, and govern.

COST AND OPERATIONAL EFFICIENCY

Savings often appear quickly by removing idle resources, decommissioning unused assets, improving cloud utilization, and extending hardware lifecycles. Governance-backed optimization links sustainability improvements to measurable reductions in spend, waste, and operational overhead.

METRICS THAT MAKE IT REAL

Track KPIs such as: energy consumption per service, % automated resolutions, average asset lifecycle duration, cloud utilization efficiency, and e-waste recycled/refurbished. These metrics surface environmental impact and operational efficiency so continual improvement can be prioritized by value.

COMPLIANCE AND BUSINESS VALUE

Green ITSM supports ESG/regulatory reporting for IT-related emissions, energy use, and e-waste. It strengthens stakeholder trust and brand differentiation while building a culture that considers environmental impact alongside cost, risk, and performance—positioning IT as an enabler of sustainable growth.

Legal Assumptions

InterGlobe Aviation Limited (hereinafter referred to as “Client/Indigo”) has published dated 09-Mar-2026 to Request for Proposal ("RFP ").

Capgemini Technology Services India Limited ("**Capgemini**”) is one of the potential suppliers interested in providing services to the Client. Capgemini’s submission of the Proposal (“**Proposal**”) is based on the assumptions set forth herein. Should these assumptions change, the fees, expenses, and schedule associated with this project may need to be adjusted.

The performance of services, schedule, resources, fees and expenses provided in this proposal are based upon the assumptions herein. Should these assumptions change, the fees, expenses, and schedule associated with this project may need to be adjusted.

- Parties agree that the relationship between the Indigo and Capgemini for the RFP will be governed by the existing Master Services Agreement dated 17th May 2023 (“Agreement”), executed between the parties and hence no terms of the RFP will be applicable to Capgemini. In the event of any conflict between the terms of the Agreement and the RFP, the terms of the Agreement shall prevail, unless explicitly agreed by the parties.
- The services do not purport to identify all steps or approaches necessary for the Client to improve its operational or financial performance or to accomplish any particular business goal. Capgemini provides no assurance as to the extent to which a potential benefit, whether or not identified in this RFP, will be achieved.
- While Capgemini may make recommendations with respect to the project (awarded based on this RFP), the Client shall be responsible for making all decisions with respect to the project, whether or not based on Capgemini’s recommendations, and for implementing those decisions.
- Capgemini may rely upon all the data and information provided by the Client and its agents and shall not be responsible for verifying the accuracy or completeness of such information

Legal Assumptions

- While it is not anticipated that the Client will disclose any personal data in connection with this RFP process, in the event such disclosure is necessary, to the extent that the parties have access to personal data, the same shall be subject to the Data Protection laws applicable in India.
- Capgemini does not provide the Client with legal, financial advisory services or accounting advice. To the extent applicable to any of the services, the Client will consult with and rely exclusively on its own attorneys, accountants or other financial advisors for legal, accounting and related advice. Capgemini shall not be liable for any decisions made or actions taken by the Client based on such professional advice.
- Client remains solely responsible for compliance with laws applicable to its industry, and its compliance with securities, export compliance, privacy and security laws. Client retains sole responsibility for determining what actions, processes and controls are needed for the Client to comply with laws and regulations, and for monitoring its own compliance with all laws and regulations.
- Capgemini does not provide any third-party software or hardware. Procurement of all hardware, software and peripheral devices is the responsibility of the Client unless explicitly stated otherwise in the Proposal or the Agreement (as applicable). Any third-party services or tools required will be procured and managed by the Client unless otherwise specified. The client will provide the necessary infrastructure, access, and licenses required for the execution of the project.
- All Capgemini created, acquired, proprietary methodologies, tools, processes, procedures, knowledge, skills, know-how, and accelerators will remain the property of Capgemini and no license or rights to such intellectual property are granted except as expressly set forth in the Agreement.
- Upon acceptance of the Proposal and anytime thereafter during the tenure of the engagement with the Client, Capgemini's and/or its resources, including its subcontractors and/or suppliers, ability to deliver services is not materially impacted by force majeure events, including but not limited to epidemics, pandemics, natural disasters, war, civil unrest, or other circumstances beyond Capgemini's and/or its resources, including its subcontractors and/or suppliers reasonable control. If Capgemini and/or its resources, including its subcontractors and/or suppliers as the case may be, were to be impacted by such events as would be justified by Capgemini, Capgemini reserves the right to modify its Proposal including but not limited to pricing, timelines, and delivery commitments Capgemini's pricing is based on the scope and requirements as understood and stated under the RFP at the time of submission of the Proposal. Any changes to scope, requirements, assumptions, or dependencies may result in adjustments including but not limited to pricing.
