Recap from June 4th, 2026

Apryse

- Deliver entitlement and capability review
- Demonstrate relevant iText and WebViewer functionality
- Map existing licenses to potential business use cases
- Establish proactive engagement model

Jointly

- Assess current utilization and adoption
- Identify value realization opportunities
- Align on technical and business priorities
- Define engagement cadence through renewal

IndiGo

- Share current workflows and stakeholders
- Identify adoption gaps and enhancement opportunities
- Prioritize areas for further exploration
- Participate in capability workshop

The Complete Document Lifecycle

Where your current **Apryse-Webviewer** subscription sits at:

- Document Review & Collaboration
- Digital Signature
- Smart Data Extraction
- Redact, Secure, Optimize & Archive

Where your current **iText 5** subscription sits at:

- Document Generation
- Document Conversion

Potential Areas of Focus

Based on our understanding of IndiGo's digital strategy – looking to validate during discussion

[1] DIGITAL CUSTOMER EXPERIENCE

Providing seamless experiences across web and mobile channels remains a key priority.

[2] SCALE & PERFORMANCE

Supporting millions of customer interactions requires reliable, scalable digital infrastructure.

[3] PERSONALISATION & LOYALTY

Delivering more relevant customer journeys and loyalty experiences is becoming increasingly important.

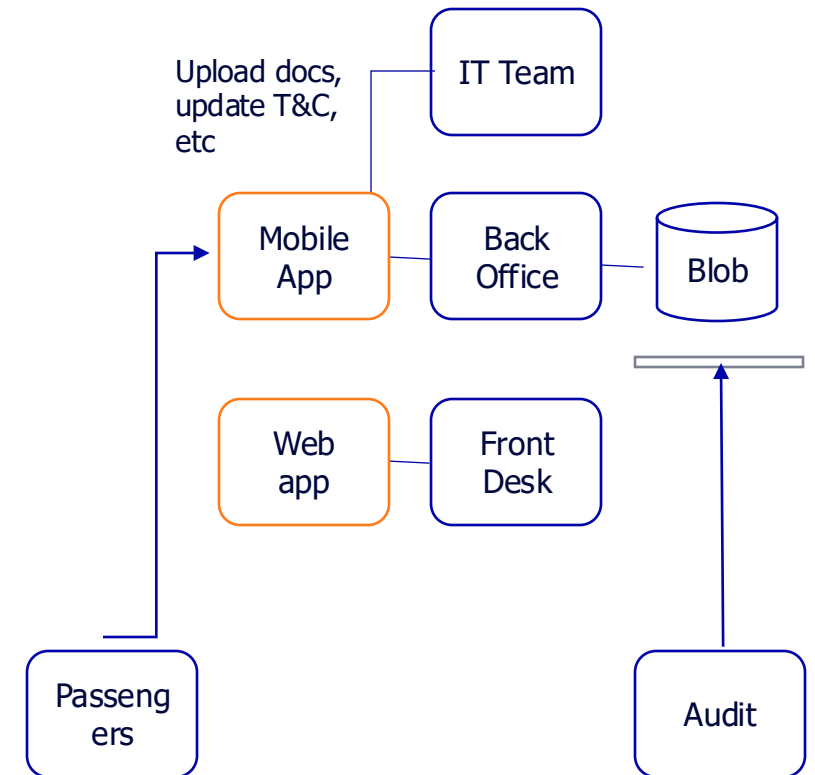

[4] SECURITY & COMPLIANCE

Protecting customer information while maintaining operational efficiency remains essential.

Discussion Objective: Understand where document generation, processing, and security workflows support these business priorities today for B2C channels.

Understanding Process and System (B2B & B2C)

- Personas
 - Passengers
 - Indigo mobile / web app users
 - view boarding passes, itineraries, receipts
 - Upload IDs, etc
 - Sign consent, T&C, declarations
 - Front Desk
 - Internal web application
 - Verify passenger identities, fetch itineraries, travel history for check-in, etc
 - Kiosk for boarding pass scanning
 - Back-office team
 - Review submissions, comment and annotate where needed
 - Communicate with passengers/ users of mobile apps via document attachment
 - Handle dispute cases
 - IT team
 - Manage blobs, object storage
 - Handle access permissions and security
 - Develop and manage pipeline for generating and updating boarding tickets, itineraries
 - Audit team
 - Request for evidence
- Document Types
 - Boarding passes
 - Itineraries
 - Receipts
 - Personal information i.e. ID, passports, etc

Passenger Document Journey across IndiGo B2C Channels

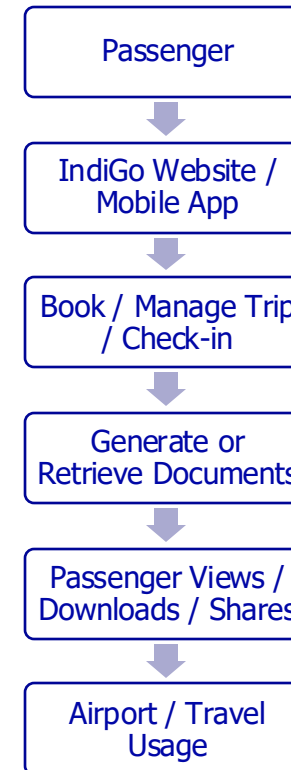

Focus: Website + Mobile App Passenger Experience

Passenger Actions

- Book / Manage Trip
 - Search and book flights vis IndiGo website or mobile app
 - View booking details under My Trips / My Bookings
 - Access itinerary, fare details, receipts, and booking confirmation
- Pre-Flight Check-in
 - Complete web or mobile app check-in
 - Select seats / add baggage where applicable
 - Generate baggage tag
 - Receive boarding pass digitally
- Document Access
 - View, download, print, or save boarding pass
 - Access boarding pass through app, email, WhatsApp, or soft copy
 - Carry relevant travel documents such as ID / passport where required
- Day-of-Travel Usage
 - Present boarding pass and ID at airport touchpoints
 - Use boarding pass for airport entry, security, and boarding
 - Refer to flight status and travel updates

Document Types in Scope

- Booking confirmation
- Itinerary
- Boarding pass
- Baggage tag
- Receipt / payment confirmation
- Passenger ID / passport / travel document references
- Terms, conditions, declarations, and consent documents where applicable

Document Generation: iText 5
Document Viewing / Interaction: Webviewer?

Apryse-Webviewer Capabilities: Current Usage & Potential Opportunities

Usecase	Feature(s)	Potential/Current IndiGo Use Cases
Web/ Mobile App Support	Embedded webviewer into iOS/ Android/ Web	Mobile and Web app services for passengers, or Internal web service for internal document review and approval workflow
Document Review & Approval Workflow	Compare (text, semantics), Annotation, Digital Signature, watermarks, stamps, bookmarks	Internal review workflow, collaboration tool for review
Core	Page viewing, manipulation, linearization	Optimized streaming to enable remote, online documents open almost instantly
Security	Redaction (Regex, custom rules), soft DRM support	Security measurement in place
International Specification Conformance	Accessibility (PDF/UA), PDF/A	Read-a-loud page, enhanced inclusiveness
Conversion	Office to PDF conversion	Consolidation and standardization of disparate office data artifacts

Webviewer Airline Use Cases

Gap	Risk	Use Case(s)
No central repositories to view/ search core schematics	Manage dozen different portals as source of truth	Cross Program Schematics Catalog: Web app used internally by launch operations engineers. CPSC provides users with access to schematics files for viewing and annotating, along with access to other relevant, supplementary information pertaining to those schematic files/the Licensee's missions.
Flight Bag – pilots want to make annotations on maps/ docs to save and potentially share	Heavy reliance on verbal/ handwritten knowledge sharing	A pilot might use an annotation to mark a turbulent part of the flight on a map, as a note for future flights
Maintenance checklists	Non consolidated communication / approval channels i.e. mix use of email threads, SharePoint. Risk of sensitive documents leave safe premise	View documents, check of procedures in equipment maintenance checklists and digitally sign afterwards as an accountability step
Internal review system		Internally developed application used for both signing contracts and the collection and validation of travel documents.
Disparate communication channels for document collaboration		An end to end review and approval workflow – i.e. No more external tools such as docuSign, various office products.

Apryse Airline Use Cases

Document Gen Pipeline

itext pdfHTML for a template based pdf generation

Searchable PDF OCR

OCR contracts, receipts, itineraries into turn them into "indexed artifacts"

Validation & Signing

Signing contracts and validations of travel documents

Capability Workshop

Apyrse-Webviewer

Apryse-Webviewer Capabilities: Current Usage & Potential Opportunities

Overview	Feature(s)	Potential/Current IndiGo Use Cases
View	• PDFs • Images	• Unified document viewing across Web, iOS, and Android • In-app access to boarding passes, itineraries, and receipts • Support passenger-uploaded travel documents • Consistent document experience across the travel journey
Annotate	• Add Text and Shapes • Add and Remove Stamps • Custom Annotations • Add Links • E-Signatures • Annotation Permissions • Rich Text Annotations • Review and Approval Statuses • Flatten Annotations • Import and Export Annotations	• Review and annotate passenger-submitted documents • Support internal verification and exception handling workflows • Enable collaboration between customer service and operations teams • Capture approvals, comments, and review history digitally

Apryse-Webviewer Capabilities: Current Usage & Potential Opportunities

Overview	Feature(s)	Potential/Current IndiGo Use Cases
Performance	• Document Streaming • Document Flattener • Optimization (including Linearization)	• Fast access to boarding passes, itineraries, and receipts • Optimized viewing across web and mobile channels • Improved performance on low-bandwidth networks • Scalable document delivery during peak travel demand
Forms	• Form Filling • Form Flattening	• Digital passenger information capture • Travel declarations and consent workflows • Self-service document submission • Mobile-first form completion experience
Search	• Text Search with UI • Programmatic Search • Ambient String Search • RegEx Search	• Search within itineraries, receipts, and travel documents • Quickly locate booking-related information • Improve passenger self-service experiences • Accelerate document review workflows

Apryse-Webviewer Capabilities: Current Usage & Potential Opportunities

Overview	Feature(s)	Potential/Current IndiGo Use Cases
Page Manipulation	• Reorder, Insert, Merge, Split, and Remove Pages • Generate Page Thumbnails • Crop Pages • Merge Documents	• Combine itineraries, receipts, and travel documents • Generate personalized passenger document packages • Simplify document delivery across web and mobile • Reduce manual document assembly workflows
Archive	• PDF/A Creation • PDF/A Validation • PDF/A A-1A, A-1B • PDF/A A-2A, A-2B, A2U • PDF/A A-3A, A-3B, A3U	• Archive passenger and transaction documents • Support audit and compliance requirements • Preserve document integrity over time • Simplify future cloud migration initiatives
Redaction	• Text and Image Redaction • Search and Redact by Text • Search and Redact by Pattern (PII, PHR, etc) • Permanent Removal of Underlying Text and Image Content	• Protect passenger personal information • Mask sensitive booking and payment details • Support privacy and compliance requirements • Enable secure document sharing workflows

Apryse-Webviewer Capabilities: Current Usage & Potential Opportunities

Overview	Feature(s)	Potential/Current IndiGo Use Cases
Intelligent Document Processing (IDP)	• Content Extraction ○ Text Extraction ○ Image Extraction ○ Embedded Fonts ○ Colour Separation ○ Tables and Articles • OCR ○ Convert Scans and Images to Text-searchable Documents ○ Get MetaData as JSON ○ Overlay Text Layer ○ Choose from Tesseract 4 or IRIS OCR engine	• Extract passenger and booking information automatically • Process travel-related document submissions • Convert scans into searchable digital records • Reduce manual data entry and review effort

Apryse-Webviewer Capabilities: Current Usage & Potential Opportunities

Overview	Feature(s)	Potential/Current IndiGo Use Cases
Digital Signing	• Digital Signatures ○ Embed Digital Certification ○ Validate Digital Certificates ○ Support for Long-term Validation ○ Support for Time Stamps • Form Designer ○ Form Creation ○ Form Field Editing ○ Form Field Customization	• Capture digital passenger consent and approvals • Enable self-service signing across web and mobile • Reduce manual and paper-based workflows • Improve compliance and audit readiness
Architecture, Engineering and Construction (AEC)	• CAD & 3D ○ 3D BIM View and Annotate ○ CAD and 3D BIM Measurement • Layers ○ Add Layers ○ Extract Layers ○ Show and Hide Layers (including OCG)	• Potential support for engineering and facilities documents • Mobile access to technical drawings and plans • Centralized viewing of infrastructure documentation • Cross-team collaboration on technical content

Apryse-Webviewer Capabilities: Current Usage & Potential Opportunities

Overview	Feature(s)	Potential/Current IndiGo Use Cases
Security	• Standard PDF Encryption • Custom Encryption • Security Permissions Modifications • Watermarking • Encryption Removal	• Protect passenger and booking information • Control access to sensitive documents • Secure document delivery across web and mobile • Support privacy and compliance requirements
Office & Templating	• Document Generation ○ Generate PDFs from DOCX Templates ○ PDF Template Generation • Office Conversion ○ Office to PDF conversion	• Generate personalized passenger documents • Automate itinerary, receipt, and voucher creation • Standardize documents across web and mobile • Reduce manual document preparation

Apryse-Webviewer Capabilities: Current Usage & Potential Opportunities

Overview	Feature(s)	Potential/Current IndiGo Use Cases
Media	• Video annotation • Audio annotation • HTML viewing • HTML to PDF • Image to PDF • PDF to Image	• Convert web content into downloadable travel documents • Generate image-based boarding passes and vouchers • Support multimedia-rich customer communications • Deliver consistent content across web and mobile
Compare	• PDF Overlay • Image Overlay • Semantic Text Comparison	• Compare booking, itinerary, and ticket versions • Validate document updates before customer delivery • Identify changes across operational documents • Reduce manual review and verification effort
PDF Editing	• Direct In-Line Text Edit • Programmatic Content Reading • Programmatic Content Editing • Programmatic Content Removal	• Update passenger and booking information in PDFs • Modify customer-facing travel documents • Automate document corrections and updates • Reduce manual document rework

Apryse-Webviewer Capabilities: Current Usage & Potential Opportunities

Overview	Feature(s)	Potential/Current IndiGo Use Cases
DOCX Editing	• Native DOCX Editing for WYSIWYG output • Create New DOCX Documents • Open and Edit Any DOCX Document • Change Text Styling • Change Font, Font Size, and Headings • Align Text and Control Line Spacing • Insert Bulleted and Numbered Lists	• Create and update operational documents • Enable self-service document editing workflows • Standardize content across teams and channels • Reduce manual document preparation effort
Accessibility	• Reflow or Reader Mode ○ Screen Reader ○ Reflow Text ○ Adoption to Smaller Screen Sizes • Bookmarks ○ View Table of Contents ○ Create Table of Contents ○ Edit Bookmarks	• Improve document accessibility for all passengers • Support screen readers and assistive technologies • Optimize viewing across mobile devices • Enhance customer self-service experiences

Capability Workshop

iText 5

iText 5 Capabilities: Current Usage & Potential Opportunities

Overview	Feature(s)	Potential/Current IndiGo Use Cases
PDF creation and generation	• Simple (using high-level API) • Complex (using low-level API)	Generating high-volume customer documents such as e-ticket itineraries, booking confirmations, GST invoices, receipts, travel vouchers, and disruption communications.
Language Support	• Chinese, Japanese, Korean • Cyrillic languages	Supporting multilingual customer documents where required for international routes, partners, or customers.
PDF Debugging	• Inspect PDFs to find and fix bugs	Troubleshooting customer-facing PDFs where rendering, formatting, fonts, images, or metadata affect web, mobile, or customer service experiences.
PDF manipulating/updating	• Adding content (watermarks, barcodes/QR codes, etc.) • Updating PDF objects (dictionaries etc.)	Adding QR codes, barcodes, watermarks, status labels, or updated booking details to customer and operational documents without regenerating PDFs from scratch.

iText 5 Capabilities: Current Usage & Potential Opportunities

Overview	Feature(s)	Potential/Current IndiGo Use Cases
AcroForm	• Creation • Filling • Flattening • XFDF support	Creating and populating customer-facing forms using booking, passenger, payment, and loyalty data; flattening completed forms for secure sharing or record retention.
XFA	• Reading	Reading passenger, booking, and travel information from submitted forms for downstream customer service or operational workflows.
Annotations	• Creation • Changing	Support internal review of customer communications, digital content, contracts, operational documents, and exception-handling workflows.
PDF parsing	• Text extraction • Image extraction	Extracting booking, passenger, invoice, receipt, and travel document data from PDFs to reduce manual handling and support self-service workflows.

iText 5 Capabilities: Current Usage & Potential Opportunities

Overview	Feature(s)	Potential/Current IndiGo Use Cases
Tagged PDF	• Creation • Reading - data extraction • Manipulating/Updating	Creating accessible, searchable, and structured travel documents for web, mobile, and customer service workflows.
PDF/A	• PDF/A-1 (a,b) • PDF/A-2 (a,b,u) • PDF/A-3 (a,b,u)	Long-term archiving of e-tickets, invoices, booking confirmations, travel vouchers, and customer communications for compliance and record retention.
PDF/UA	• PDF/UA-1	Creating accessible customer documents that support screen readers and inclusive digital experiences across web and mobile channels.
Encryption	• Encryption • Decryption	Protecting customer, booking, payment, and travel information in e-tickets, invoices, travel vouchers, and customer communications shared across digital channels.
Digital signatures	• Signing • Validating	Supporting secure signing and validation of customer, vendor, operational, and compliance-related documents across digital workflows.

Capabilities Not Available in Current iText 5 Environment

Overview	Improvements	Potential Business Impact for IndiGo
PDF creation and generation	PDF 2.0 compliance	Delivering more consistent, accessible, and future-ready customer documents across IndiGo's digital channels while supporting evolving customer experience and compliance requirements.
HTML to PDF conversion (with pdfHTML)	- Enhanced support for HTML & CSS - HTML to PDF/UA, PDF/A - Out of box support elements/attribute	Converting web and mobile booking experiences into consistent, accessible customer documents such as e-tickets, booking confirmations, invoices, vouchers, and travel communication.
PDF redaction (with pdfSweep)	- Removing sensitive data - Regex based redaction	Protecting passenger, booking, payment, loyalty, and travel document data before documents are shared with customer service, partners, vendors, or internal teams.
Language Support (with pdfCalligraph)	- Better support for Arabic, Hebrew - Indic languages - Thai, Khmer - LTR writing	Support personalised and localised customer journeys through multilingual travel documents and customer communications.

Capabilities Not Available in Current iText 5 Environment

Overview	Improvements	Potential Business Impact for IndiGo
Data Extraction	Extraction of images, tables, text	Extracting customer, booking, invoice, receipt, and travel document data from PDFs to support customer service, analytics, automation, and digital workflows.
XFA (with pdfXFA)	Flattening	Supporting modernisation of legacy document workflows by converting XFA forms into web, mobile, and customer-friendly PDF experiences that are easier to maintain and integrate across digital channels.
Text recognition (OCR) (with pdfOCR)	- Recognize and extract text - Recognize text and convert to PDF - Recognize text and convert to PDF/A-3u	Converting scanned customer, operational, and travel documents into searchable, structured, and reusable data to support customer service, analytics, automation, and digital workflows.
PDF optimization (with pdfOptimizer)	Intelligently optimize PDFs for size and speed	Improving performance and operational efficiency when generating, storing, and distributing high volumes of customer-facing travel documents across IndiGo's digital ecosystem.

Thank you!
